*TO THE PRINTER:*

THE Type and Borders shown in this specimen book excel in design—the chief merit of type—and their durability is assured by the use of the celebrated Copper Alloy Type Metal ❧ The selection of styles of Type illustrated in this book excels in both variety and utility the combined product of all other type foundries ❧ A printing office completely supplied with the products of this Company is worth far more for either use or sale than one made up from the productions of incomplete type foundries ❧ It is conceded that the Type made by this Company is the standard for excellence throughout the world. Every endeavor is made to advance that standard ❧ As the largest purchaser of Printing Machinery and Materials in the world, this Company commands the best of everything for the printer, and has unsurpassed facilities for meeting the requirements of printing offices ❧

# USEFUL INFORMATION

*See pages 981 to 1024 for a variety of useful data, including Imposition of Forms and a Price List of Printing and Binding.*

## TYPE STANDARDS

The following is the standard adopted by the International Typographical Union. The basis of measurement is the lower-case alphabet, from a to z inclusive, and the ems used are the same body as the type measured :

| | EMS |
|---|---|
| 4½ Point | 18 |
| 5 " | 17 |
| 5½ " | 16 |
| 6 " | 15 |
| 7 " | 14 |
| 8 " | 14 |
| 9 " | 13 |
| 10 " | 13 |
| 11 " | 13 |
| 12 " | 13 |

## HOW TO ESTIMATE

To ascertain the quantity of body type required for a publication, find the number of square inches and divide the same by four, and the quotient will be the approximate weight of type required ; but, as it is impossible to set the cases entirely clear, it is necessary to add 25 per cent. to the weight of large fonts, and 33⅓ per cent. to small fonts, to allow for dead letter.

## NUMBER OF EMS IN ONE POUND OF TYPE

Two by two inches (four square inches) solid type weighs approximately one pound.

| | EMS |
|---|---|
| 5 Point | 829 |
| 5½ " | 685 |
| 6 " | 576 |
| 7 " | 423 |
| 8 " | 324 |
| 9 " | 256 |
| 10 " | 207 |
| 11 " | 171 |
| 12 " | 144 |

## USEFUL IN ORDERING SORTS

The following table shows what each box in the type case will hold :

| LETTERS. | WEIGHT IN FULL BOX. |
|---|---|
| a c d i s m n h o u t r | 2 pounds. |
| f b l v g y p w | 15 ounces. |
| k j z x q and all figures | 6 ounces. |
| e | 3 pounds. |
| Caps and Small Caps | 5 ounces. |

## AMERICAN POINT SYSTEM

The following table gives the names of the old bodies and their new designation by points:

| | |
|---|---|
| 3½ Point | Brilliant. |
| 4½ " | Diamond. |
| 5 " | Pearl. |
| 5½ " | Agate. |
| 6 " | Nonpareil. |
| 7 " | Minion. |
| 8 " | Brevier. |
| 9 " | Bourgeois. |
| 10 " | Long Primer. |
| 11 " | Small Pica. |
| 12 " | Pica. |
| 14 " | 2-line Minion or English. |
| 15 " | 3-line Pearl |
| 16 " | 2-line Brevier. |
| 18 " | Great Primer. |
| 20 " | 2-line Long Primer or Paragon. |
| 22 " | 2-line Small Pica. |
| 24 " | 2-line Pica. |
| 28 " | 2-line English. |
| 30 " | 5-line Nonpareil. |
| 32 " | 4-line Brevier. |
| 36 " | 2-line Great Primer. |
| 40 " | Double Paragon. |
| 42 " | 7-line Nonpareil. |
| 44 " | 4-line Small Pica or Canon. |
| 48 " | 4-line Pica. |
| 54 " | 9-line Nonpareil. |
| 60 " | 5-line Pica. |
| 72 " | 6-line Pica. |

## HOW TO ORDER SORTS AND PREVENT ERRORS

In ordering sorts always inclose a metal cap *H* and lower-case *m* of the type you wish to match, and plainly state the quantity of each character required. Be sure and inclose sample before sealing envelope inclosing order. Better put sample in a small envelope. Avoid trouble and delay by being explicit. Order every article by the *exact name and number* given in the specimen book. Variations from the book names frequently cause error and delay. For instance: "Condensed Old Style" is not necessarily the same as "Old Style Condensed." *Do not mutilate* a specimen book. It does not help us to receive printed specimens taken from our specimen books. On the contrary, it retards the filling of an order, and it impairs the value of the book. In ordering, write each item on a separate line. Orders written in long paragraphs invite error. Separate the order from the accompanying letter. It will save time. As one man fills the order and another answers the letter, it is obvious that they cannot both work from the one document.

# ALLOWANCE FOR OLD TYPE AND OTHER METALS

**Old type (clean and unmixed with other metals), electrotypes, leads and brass, delivered at foundry free, will be taken at current prices in even exchange for new type or printing material.**

**Customers sending in old metal are requested to mark their names on all packages, and to forward by mail a shipping receipt or bill of lading, with the net weight of each kind of material, as soon as shipment is made. Compliance with this request will aid in identifying shipments, and prevent errors. Ship as "old metal" to secure low freight rate.**

SPECIAL NOTICE.—**Zinc plates, metal containing zinc, or type and other plates mixed with zinc plates, and stereotype plates, will not be received at any price.** Type, electrotype plates, leads and **brass, must be packed separately,** as the value of each differs.

Example, in combination with Mail List Logotypes 10 Point No. 122

Dr Chauncey Depew 3 Oct 91
Mrs Mary Walker 31 Mar 83
Mr James J. Corbett 3 Jan 96
Rev Abe Slupsky 30 Nov 98
James J. Blaine 3 Feb 89
Theo. Roosevelt 4 Apr 79
Miss B. Hesselberg 3 Dec 95
Dr Dora Bloomer 12 May 95

*Every character is cast on en-quad set, and only en-quads and 4-to-em spaces are used for spacing. By setting sticks to a multiple of 10 Point, spacing and justification become mere child's play; in fact, this type is self-spacing. Although the face is large, on examination it will be found that Time-Saving Mail List Type is quite as condensed on the average as ordinary Mail List Type. Price, same as for 10 Point Roman*

# LEADERS FOR BODY TYPE

These are put up in 5-lb. fonts, and are not included in fonts of body type. It is always necessary to state the type the leaders are required to line with, or to send a cap "H" and lower case "m" of the type. We make the following styles, the prices of which are the same as for Fine-Dot Leaders shown above:

HYPHEN (two strokes to the em)

For 6, 7, 8, 10, 11 and 12 point bodies.

REGULAR (two dots to the em)

For 5, 5½, 6, 7, 8, 9, 10, 11 and 12 point bodies.

OPEN (one dot to the em)

For 6, 7, 8, 9, 10, 11 and 12 point bodies.

# ACCENTED LETTERS

We make a vast number of accented letters for both body and job type for use in the Spanish, French, German, Swedish, Norwegian, Danish, Italian, Portuguese, Polish and Bohemian languages, and can furnish complete outfits for printing in any of those languages. We print below assortments of accents used in various languages for the information of our customers, who will be informed upon application as to which of these accents can be supplied for any size or series of type. Accents not in common use in this country will be cut to order at a charge of $2.00 and upwards per matrix, such matrices becoming the property of the customer. Accents for which we have matrices will be furnished at the same rate as charged for the font for which they are ordered.

The following lower case accented letters of Roman and Italic are furnished with the body type for which they are made, and a number of these accented letters can also be furnished in capitals and small capitals.

# DESCRIPTION OF SELF SPACING TYPE

SELF SPACING TYPE IS MADE UNDER PATENTS ISSUED DECEMBER 18, 1883

THE common widths of book pages, miscellaneous jobs and newspaper columns are some number of Pica ems, therefore the Pica em is taken as the basis for Self Spacing type. The thinnest space in all fonts is some exact fraction of a Pica, and this fraction of Pica is called the unit of measure. All characters, spaces and quads in the font are made some exact multiple of this unit in width, so that the sizes of all faces will work perfectly together in the regular labor-saving measures. This unit of measure may be one-sixth, one-seventh, one-eighth, one-ninth, etc., of a Pica em, as may be desired, to produce condensed, medium or extended faces. The following table gives the sizes of bodies, units of measure, and lengths of alphabets. In the first column will be found the various sizes of bodies; in the second, the number of units contained in one em Pica, and in the third the measurements of a lower case alphabet in the ems of each particular body:

| BODY | Number Units to Pica em | Length of Alphabet |
|---|---|---|
| 5½ Point (Agate)..... | 12 | 16⅞ |
| 6 Point (Nonpareil)... | 12 | 15½ |
| 6 Point (Nonpareil)... | 11 | 17 |
| 7 Point (Minion)..... | 11 | 14½ |
| 7 Point (Minion)..... | 10 | 16 |
| 8 Point (Brevier)..... | 11 | 12⅝ |
| 8 Point (Brevier)..... | 10 | 14⅛ |
| 8 Point (Brevier)..... | 9 | 15½ |
| 9 Point (Bourgeois).. | 10 | 12⅜ |
| 9 Point (Bourgeois).. | 9 | 13¾ |
| 10 Point (Lg. Primer). | 9 | 12⅜ |
| 10 Point (Lg. Primer). | 8 | 14 |
| 11 Point (Small Pica). | 8 | 12⅔ |
| 11 Point (Small Pica). | 7 | 14½ |
| 12 Point (Pica)..... | 7 | 13¼ |

In the foregoing table will be found a Nonpareil with one-twelfth of Pica as the unit of measure. This is one-sixth of the body of Nonpareil, or the six-to-em space, and preserves in this particular font the old three-to-em space and the old en and em quads. The same is true of the Brevier on one-ninth, Bourgeois on one-eighth, and Pica on one-sixth of Pica.

In a complete font of the old kind of body type there are about 190 widths of bodies. Appended is a table showing the different widths of bodies of Self Spacing. It will be readily seen that there are but nine widths of bodies all told, and that the four-unit width predominates largely over any other, there being fifty-nine characters of this width. We omit the Italic characters from the table, as they go on the same widths of bodies and are interchangeable with the Roman:

| | | |
|---|---|---|
| 1 unit | —Space..... | 1 |
| 2 units | —Space, f i j l , : ; . - ' ! I J ' \| ..... | 16 |
| 3 units | —Quad, c e r s t z s z I J ? ) [ * † ‡ § ‖ ¶ – °..... | 22 |

Any compositor can see that no combination of units can be made that will not come within a certain number of exact units of filling a line. If a line of matter lacks, it must lack one or more exact units.

Self Spacing type sets line for line with the ordinary Roman, where the lengths of the alphabets are the same.

Repeated experiments with the new type have shown that the average compositor gains about twenty-five per cent. in speed, with no trouble in justification whatever.

In the matter of the correction of proofs the gain is enormous. Say there is an "a" for "e"; as "a" is four units wide and "e" three, "e" and one unit space justify the line perfectly. Even this measure of trouble is avoided in many instances. As twenty-eight of the most common lower case characters are of the same width, they can be substituted for one another without the change of a space.

This type is of greater durability, as it is always on its feet and is therefore not worn by "pounding."

In tabular work there is a great gain in speed and neatness. By the addition of a new character, viz: "|", it is easy to set perpendicular lines of any length, line upon line.

It may be repeated that the compositor has nothing to learn in Self Spacing type. There is but a single direction to be given—to set that which looks like the em quad (six unit quad) with the nick out.

Whoever will study the principle on which Self Spacing type is based, will readily admit that it is bound to secure easy and perfect justification, greatly increased speed and consequent enormous saving, simplicity and rapidity of proof correction, and increased accuracy and ease in the setting of tables. All these points are beyond question, as certainly as the proposition that two and two make four is not open to argument. No rational person can doubt them.

The following piece of composition was done in a 12½-em measure stick, and set line upon line in the ordinary manner of straight reading matter, the lower part being leaded to show the method of setting:

| No. 1 | No. 2 | No. 3 | No. 4. | No. 5 | No. 6 | No. 7 |

| \|still\|i | \|$34\|! | \|NOT\|I | \|beat th\| | \|this\|I | \|NOT\|! | \|234\|I |

To further explain and illustrate the ease with which table work is done with Self Spacing type, we show above an example of miscellaneous justifications, which is absolutely impossible to accomplish with the old kind of type. In column No. 1 the first line begins with the lower case "i", two units wide, which is followed by the upright dash "|", two units, and the characters "a", four units, "n", four units, "d", four units, comprising sixteen units to accurately fill the column. The second line begins with the letter "s," three units wide, which throws the space rule one unit further to the right than in the preceding line. In each succeeding line lower case characters are used to the total width of sixteen units, and such characters are chosen for the first part thereof as will admit of advancing the space rule to the right exactly one unit in each succeeding line.

In the other columns the same plan is followed, the only change being the substitution of caps, small caps, figures, etc., for the lower case characters, all columns coming perfectly justified inside the perpendicular lines.

# SELF SPACING MODERN ROMAN—NEWSPAPER STYLE

6 POINT NO 20½

Unit of measure, 12 to Pica

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a due respect to the opinion of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such *form, as to them shall seem most likely to effect their safety and happiness. WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established, should not be changed for light and transient causes; and, accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, *than to right themselves by abolishing the forms to which they are accustomed. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate *that governments long established, should not be changed for light and transient causes; and, accordingly, all experience hath shown, that mankind are more disposed to suffer,*

# CENTURY ROMAN

8 POINT

THE first number of *The Century* appeared in a modernized old-style type, which was then something of a novelty. It had never been used in any similar publication, and it gave distinction to the page. It had authority in its favor, as the outgrowth of a style (shown on pages 127 and 128 of this book), brought out by WILLIAM CASLON of London about 1720, and then so pleasingly cut that it broke down every attempt at rivalry. For seventy years it was commended as incomparably the best cut of type, but it went out of fashion. At the beginning of the present century readers complained of its angularity and grayness. THEY demanded new styles, and the type-founders provided them in profusion: the Thorne fat-face of prodigious blackness; the Didot round-face, not quite as black or fat-faced; the Bodoni, with round letters and sharp hair-lines; the French poetic face, compressed to the extreme of tenuity; the so-called Scotch-face (devised by the late S. N. DICKINSON of Boston, who established the Dickinson Type Foundry, the Boston Branch of the American Type Founders' Company, although first cut in Edinburgh); and the skeleton light-face, with its razor-edged hair-lines and needle-like pointed stems, *fashionable during the first part of century*

WHEN PICKERING and WHITTINGHAM revived the CASLON Old-Style, in 1850, using the identical matrices of the old master, the connoisseurs said, "Now at last we have returned to simplicity and beauty; this is perfection!" Yet it was admired by bibliophiles only; dainty readers did not approve of its angular letters and its disproportioned capitals. Accepted for reprints of old books, it was rejected for modern work. To make it palatable to the general reader, type-founders devised a "modernized old-style," in which harsh features were modified and new features of great delicacy were added. So changed, it became a more salable letter, but it never found marked favor with the ordinary newspaper or the book publisher. Critics said of it (too severely, we think) that the strong features of the Caslon face had been suppressed, and that the new features were no improvement; that it had *been made lighter, sharper, and broader, until its true character had been cut to pieces.*

BIBLIOPHILES still prefer the cut of CASLON; with all its admitted faults, it is blacker, clearer, and more readable. The average reader rejects the angularities of the old and the new cut, and prefers the symmetry of types of modern fashion. In the bewildering variety of faces devised during this century, one peculiarity, the sharp hair-line (a fashion introduced by BODONI and DIDOT, in imitation of the delicate lines of the copper-plate printer), has never been changed. When printing was done upon wet paper, against an elastic blanket, the hair-line was necessarily thickened by its impress against the yielding paper, which over-lapped the sides of every line. Under this treatment the hair-line appeared thicker in print than in type, and was unobjectionable to printer or reader; but when the new method began (as it *did in* 1872) *of printing on dry and smooth paper against an inelastic surface*

# MR. THEODORE L. DEVINNE ON THE CENTURY ROMAN.

(From *The Century*, March, 1896.)

[NOTE.—This series of modern Roman type was cut by the American Type Founders' Company for *The Century*, in accordance with the suggestions and under the supervision of Mr. THEODORE L. DEVINNE, the eminent printer of that magazine. The punches were cut on the Benton punch-cutting machine from one set of drawings. A very complete line of accents has been added to meet the requirements of high-class book and magazine work.]

A GREAT change has taken place in the taste of readers, who have wearied of light types and gray impressions. There is an unmistakable demand for bold and stronger print. American type-founders recently introduced several styles of bold and black letter—for publishers and advertisers, as well as for bibliophiles. The "Jenson," "Monotone" and the "DeVinne" are in high favor with all, not for their novelty of form, but for their greater legibility. With these evidences before them of a general preference for bolder types, the publishers of *The Century* decided that they would swim with the tide, and have types of larger face and thicker hair-lines. According to old rules, Roman types would be bolder and more readable when made larger and wider. Experiments made with broad letters proved that increased expansion did not always secure increased legibility. The broad and round faces which seemed so beautiful in large-margined pages of Bodoni and Didot were not all beautiful (quite the reverse) when printed in double columns on a page with narrow margins. To use types in which the thick strokes of each type are unduly spread apart on a page with narrow margins is an incongruity that cannot be justified. When margins are ample, and space is not pinched, types may be broad and even expanded. When the page is over-full, the types should be compressed to suit the changed condition. The fault of over-broad type is most noticed in books of poetry, in which the narrowness of the measure compels an overturning and mangling of lines, a waste of space, and needless irritation to the reader. Experiment proved that a book-type moderately compressed and properly cut was as readable as round or expanded type. Compressed types, first made in Holland in 1732, ever since have been more largely used than types of any other cut by the printers of France and southern Europe. In dictionaries and books of two or more columns to the page, the compressed face is a necessity. The slightness of the compression in this new face will be perceived at a glance in a comparison of the alphabets of the old and of the new face as here submitted:

abcdefghijklmnopqrstuvwxyzABCDM

THE NEW FACE.

abcdefghijklmnopqrstuvwxyz ABCD

THE OLD FACE.

The new face is as wide as the old; it has as much open space within as without each letter, and just as many letters to the line; it has the greater clearness of a thickened hair-line. It seems to be compressed only because it is taller, but this increase of height amounts to only sixty-five ten-thousandths ($^{65}/_{10000}$) of an inch.

The story of the designing of this face is too full of technical detail to interest the casual reader. Only a maker of instruments of precision can appreciate the subservient tools, gauges, and machines that show aberrations of a ten-thousandth part of an inch; only an expert punch cutter can understand why minute geo-

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires *that they should declare the causes* which impel them to the separation. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety

We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these, are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established, should not be changed for light and transient causes; and, accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. WINES IMPROVED BY ELECTRIC CURRENTS

Mr. Scouteten, in a recent announcement, renews his assertion that a current of electricity passed through wines exercises a very positive influence in ameliorating and improving them, and refers the alteration to the decomposition of the tartrate of potassa by the electric current. The potassa set free neutralizes the acid of the wine, while the tartaric acid combines with its matter 2390

AVOID DECEIT AND ABUSE

It is astonishing how people persist in practicing deceit. It is the most detestable and vicious agency that can be used in human intercourse. Men in all conditions of life, the lowest as well as the highest, despise and abhor it as an adder. You may slander, abuse and beat 184

METALS COATED WITH NICKEL

Much interest was experienced at the Academy of Science in Paris, some time since, by the exhibition of various specimens of metallic articles which were electro-plated with nickel by the new process of Mr. Adams, of Boston. This application of nickel is very likely to be of the greatest value from an industrial point of view since the metal thus deposited has a 765

*One of the peculiar features of this series is, that the lower-case letters b d h m n p q and y can be used to represent q p y w d b and h; capital M makes W; figure 7 makes L, and figure 0 makes Q, by merely inverting them—an important item to the printer when short of "sorts." The letters line both ways. Logotypes furnished with each size.*

In the great naval battle off the Yalu River last year the Chinese iron-clad battle-ship, Chen Yuen, was commanded by an American named Philo McGriffen, a graduate of the Naval Academy at Annapolis. ## THE CRADLE ASKS US WHENCE, AND THE COFFIN WHITHER IS LIFE WORTH ALL OUR ANXIETY

My friends: I know how vain it is to gild a grief with words, and yet I wish to take from every grave its fear. Here in this world, where life and death are equal kings, all should be brave enough to meet what all the dead have met. The future has been filled with fear, stained and polluted by the heartless past. From the wondrous tree of life the buds and blossoms fall with ripened fruit, and in the common bed of earth the patriarchs and babes sleep side by side. Why should we fear that which will come to all that is? We cannot tell, we do not know, which is the greater blessing—life or death. We cannot say 1565

**FOR HIS GREAT QUALIFICATION PETER SCHŒFFER WAS MADE MANAGER OF THE OFFICE IN MENTZ**

PETER SCHŒFFER before the age of twenty years was considered a perfect copyist of old manuscripts, with a slight knowledge of printing taught him by Gutenberg. He attracted the attention of Fust, who found in him one who could cleverly manage a Printing Office, and by adding to his great knowledge the acquirement of ingenuity, he made many acceptable changes in the pages of the Bible and Psalter. Between 1462 and 1464 turbulent times occurred in Mentz and business was at a standstill.

# AN IDEA OF DISCOVERING A NEW HEMISPHERE

IT was Columbus, the intrepid Italian, who conceived the idea about the world being round instead of flat, and who sailed off into an unknown sea in the expectation to discover a hemisphere of two continents. Encouraged by the Spanish Crown in his undertaking, he set sail on August 3, 1492, sailing in a westerly direction.

### A CURTAILED DESCRIPTION OF SOME THINGS THAT WERE NOTICED WHILE EXPLORING THE GREAT MAMMOTH CAVE

THIS is a very interesting journey indeed. On arriving at the Cave one is astonished to view an immense rock over the entrance supported only by a very small stone, which if displaced would close the entrance forever and entirely entomb those inside. Leaving this fear aside, we find, on entering, several large rooms of wonderful size, also a running stream, a star-chamber, lighted by numberless small stars, and many strange carvings surprising to behold and to contemplate. Some of the chambers are very cold and others warm. This is said to be from changes of wind, in the same manner as those above the ground. The wonders of the Cave are explained by an experienced guide, without whose aid one would be lost forever in the vast space of this natural wonder.

## FEW THOUGHTFUL POINTS ON THE STUDY OF ASTRONOMY

IT will be very interesting, to many of us, to note the fact that during the month of August there is to be seen Jupiter and Venus in conjunction. It takes place low down in the western part of the horizon, and will be worth all the trouble we can take to witness such beautiful display; also the conjunction of Jupiter and the Moon, and Venus and the Moon. It is an infrequent occurrence to see these three bodies so close together, and the students should therefore avail themselves of this rare opportunity of viewing them.

## ENLIGHTEN HONEST CUSTOMERS

In one particular it is always wise to enlighten every patron in order to reach a basis of mutual understanding when contracts are made. Most people are more or less ignorant of the customs and terms of the trade. This ignorance leads to much disputing and rankling dissatisfaction on the part of customers. Well-meaning and honest though they are, it is difficult for them to understand why the bill should be $329

# ON THE PROGRESS IN MACHINERY AND THE MAKING OF NEW TYPE FACES

IN 1835 I saw for the first time the printing house of Harper & Brothers. With childish awe I watched the flutter of the friskets of a dozen hand presses, and the slow but steady piling-up of printed sheets on the bank. Could any machines be finer or better? So I thought, and so Harper & Brothers thought; but in a few years the hand presses were supplanted by the Adams. This change was but the beginning of a series of changes that I can sketch in outline only. The two-roller Adams of wood frame was followed by the four-roller machine of iron frame and $4295

# MODERN VERSION OF THE WORLD OLD STORY OF MAKING BRICKS WITHOUT STRAW

WHEN we discover here and there a printer wasting his energies and abilities in the vain endeavor to execute printing to the satisfaction of his clients with type lacking in originality, in art, and devoid of the life that can only be imparted by a genius in designing, we are reminded of the cruel task allotted to the Hebrews by the old Egyptians. There is neither profit nor pleasure in trying to impart an artistic effect with inartistic type. It is a question whether the durability of such type is not an added injury to the unfortunate printer who uses it. Pound for pound the type of the American Type Founders Co. costs no more than type unenlivened by artistic merit; but in its true value it surpasses all other type as the masterpieces £376

## THE MANUFACTURERS OF OUR MACHINES ASSURED US AGAIN AND AGAIN THAT THEIR LAST MACHINES WERE PERFECTION.

IT was not possible to make anything better; they would meet every demand for strength, speed, accuracy, and ease of handling. So they did for a time; but in a few years on came the improvements, once declared impossible, and in the form of larger and more efficient machines. The presses that were the best of their kind in 1865 proved too small and too slow in 1875. To continue to use them would be to do work at cost or at loss. When one has room enough, the old machines may be set aside and put to an inferior class of presswork. But when rents are high and space is contracted the old machines must be sold. What do we get for old presses? It often happens that after only seven or ten years of service, the press that cost $3000 or $5000 will be sold for from $300 to $600. It is not worn out, it may be in good condition, and should be efficient for twenty years more, but it must be sold because it is not up to present needs. It will not pay to keep it when your rival is using new machines.

### A GOOD FEATURE IN PREVAILING FASHIONS IS THE GENERAL DISLIKE FOR ALL ORNAMENTAL AND FRAIL TYPES.

WHEN Whittinghouse of London revived the trade for old style letter, in 1844, the old order changed. Not liked at all in the beginning, old style slowly grew in favor, especially with those who wished to give distinction to their work. Before 1860 it was required of every prosperous book and job printer that he should have a full series of old style faces, complete from Pearl to Canon. This compelled a doubling of the expense of equipping the composing room; but if the demand for novelty had stopped here, this added expense might not need any notice. But it did not stop with the modernized old style. Think of the varieties now offered to us by the type founders—Caslon, Franklin, Barth, Binny, Ronaldson, Cadmus or Elzevir, French, Jenson, etc. Nor is this all: other faces with peculiar mannerisms are made abroad, and there are publishers who will have them. Standard or modern-cut Roman is provided by type founders in greater variety. The book printer who has two faces only in series soon finds them insufficient. He has demands for others.

10 POINT 25 A 30 a $3 00

## HE HAS DEMANDS FOR FACES BOLD AND BLACK, LIGHT AND SKINNY, BROAD, CONDENSED, LARGE

SMALL, with long ceriphs, with short ceriphs, with high ascenders, with short descenders, and other mannerisms too tedious to describe. We are asked to get these in fonts of thousands of pounds, but to buy half of them, or quarter of them, is to invite bankruptcy. There are publishers who ask that thousands of pages be kept standing for months. There are men before me who have sent, and are sending, proofs to Europe, and even to the Pacific Islands, and Asia. A prominent printer of Paris told me that the weight of the book types in his house largely exceeded two million pounds. The tied-up pages piled up like bricks on every floor of the house was proof of the statement. Fifty years ago a book and job printer could keep sixty compositors at work on a plant of types and appurtenances that cost less than $10,000.

AMERICANS have realized within recent years that there are some provinces by the sea, located as the mariners would say nor'-nor'east of us, which for wholesome climate and varied sights offer a greater wealth of attractions during summer days than is possessed by any other nearby region. Geographers have given to them the name of Maritime Provinces

THE SHOOTING on Prince Edward Island during the season is exceedingly good, and wild geese, brant, duck, partridge, woodcock and snipe are to be found in abundance, while such streams as the Monce, the Dunk, the Pierrejaques, the Miminigash, the Kildare, Tignish and others, teem with trout and salmon. From any one of the little seaside towns on Prince Edward Island one may have within a half-hour or hour's sail an abundance of mackerel and deep-sea fishing. ✱ ✱ ✱ The island constitutes the smallest of the provinces, but maintains equal dignity with the greatest, having its own provincial government, comprising a governor and parliament, and sending six commoners to

WESTWARD from Windsor the country takes on a different character. Barren rocky slopes have given way to fertile fields. The hills have drawn apart and the Gaspereau Valley spreads out its verdure-covered meadows and luxuriously-foliaged orchards on every hand. Over to the right sparkles the Bay of Minas, and outlined on the horizon is grand old Blomidon, that majestic bastion, keeping faithful sentinel, as in the days of Evangeline, over the turbulent waters, which rise and fall with mighty force at its rocky base, guarding the peaceful valley

FROM HALIFAX fishing trips may be taken either by the several coach lines along the coast, or by private conveyances, which are to be obtained at reasonable cost. There is good sport along the western shore all the way to Chester and Gold River. Indian River, twenty-one miles from Halifax, and Ingram River, distant twenty-five miles, are also good points, as is Grand Lake. At St. Margaret's Bay may be found an old-fashioned inn and guides. Indian Lake, about eight miles from Halifax, on the Prospect Road, Peters Lake, Spruce Hill Lake and Nine Mile River are good points for the Spring and Summer sport. ✱ ✱ ✱ It is impossible, in an article of this length, to give a list of all the favorite places for sport, but this information can readily be secured in Halifax or any of the larger or smaller towns. No reference to fishing in the Provinces would, however, be complete without mention of that most famous of all salmon waters, the Margaret River, in Cape Breton

His hair was full of dust,
And so was his cravat;
He was furthermore embellished
By a ticket in his hat.

On bonnets in a heap.

All the while the swaying cars
Kept rumbling o'er the rail,
And the frequent whistle sent
Shrieks of anguish to the gale,
And the cinders pattered down
On the grimy floor like hail.

Life's parting beams were in his eye,
Life's closing accents on his tongue,
When round him, pealing to the sky,
The shout of victory rung!
Then, ere his gallant spirit fled,
A smile so bright illumed his face—
Oh! never, of the light it shed,
Shall memory lose a trace!

His was a death whose rapture high
Transcended all that life could yield;
His warmest prayer was so to die,
On the red battle-field!
And they may feel, who loved him most,
A pride so holy and so pure—
Fate hath no power o'er those who boast
A treasure thus secure!

When evening calls the dove

Where doth the orange gleam
Soft on my native stream?

All Photo-Engravings are produced by means of photography. It is a fact worthy of note that experimenting in photographic engraving gave rise to photography itself. The aim of Niepce, when he began his researches, was not only to fix the image he obtained by the camera obscura upon a metal plate,

12 POINT 12 A 32 a $3 08

But to convert this plate into an engraving which could be used on a printing press; but his early death prevented perfecting the process to which he had devoted much time and study. From that time experimenting has been continued by several others, and the result is the production of a number of different processes. A popular one is the swelled gelatine process, though handling 2468

10 POINT 16 A 40 a $3 42

This method of engraving has an advantage over wood engraving in the matter of cheapness; but it has countervailing disadvantages, and there are many subjects in which wood engraving surpasses all methods of process engraving. To reproduce a drawing for printing purposes, the picture should be formed of clean, sharp, and very black lines or dots on perfectly white paper. Flat tints and washed or blurred shadows will not answer, unless they are first translated into lines or stipple. Where an engraving is to represent machinery, the 13579

Object is photographed twice the size the plate is to be when finished. The photograph, or silver print, as it is technically called, on which the drawing is to be made, is not toned, but simply fixed in a fresh fixing bath, and then thoroughly washed and dried. It is now ready for the artist, who, with pen and suitable ink, draws directly on the silver print, portraying in delicate lines and dots the lights and shadows of the photograph. After the drawing is complete the photograph is bleached, by pouring upon it an alcoholic solution of bi-chloride of mercury, leaving the ink lines of the artist on clean white paper. The advantage of this method of drawing is at once apparent. The artist has the advantage of working directly on and over

*In the earlier years of his life the parents of Horace E. Walker moved to Claremont, N. H., thence to Brooklyn, N. Y., the father returning to that place from a short stay in California. From thence the family returned to Claremont, at which place the author's poetic labors have since been performed. Come of poor parents his educational advantages were small, he not having attended school since he was about sixteen years of age; and his best work was mostly composed in a cotton factory while tending the Slasher so often referred to in his poems. But not till after he had reached the age of twenty-four did he attempt poetry. And strange enough, the "Lady's Cabinet of Polite Literature" was the star-book of his poetic career, which having been published in 1808, was enchanting to the view.*

*On August 9, 1852, a child was born at Charlestown, N. H., who, Burns-like, was to eke out a precarious and uncertain poetic existence in the coming years. You see the little gable-roofed house where he was born at the foot of the long hill, with its ancient moss-covered watering trough, just on the outskirts of the historic town. It stands there to-day in its unassuming simplicity, with but slight marks of age, though nearly half a century has passed since its birth there.*

THE LADY OF DARDALE

# FRENCH OLD STYLE No 2 ITALIC

8 POINT 24 A 60 a 82 75

*We now come to the commencement of the third period of Grecian history, at which time the Grecians became intermixed with the Persians in their late history. Darius, son of Hystaspes, being in possession of the Persian throne, resolved to conquer the Greeks, and bring their territory under his immediate control. He therefore sent his army, under the command of his most able officers, into Greece, and the Persians were so sure of success that they carried marble with them for the purpose of erecting a monument to their glory, as conquerors, when the Grecians should be defeated. The celebrated battle of Marathon followed, when the Persian soldiers came in contact with such men as Themistocles, Aristides, Miltiades, and many others of considerable note, distinguished for their courage and valor—who were prepared to resist them, and to defend their country. It is well to notice the character of these prominent men as they come before us in this capacity, and, in doing so, we shall see that they were not unlike men of our own times. The two first mentioned, Themistocles and Aristides, were a perfect contrast in their principles of life.*

6 POINT 20 A 45 a 82 25

*ARISTIDES WAS A STRONG CONTRAST TO THEMISTOCLES, and appeared everywhere to oppose his corrupt principles. He was a man of true and noble character, straightforward and upright in all his department. He would not sacrifice principle to favor his best friend; and because of these excellent traits of character he was called Aristides the Just. Aristides was banished from Greece at one time, through the influence of Themistocles, who wanted to be rid of his constant reproof, and when the people came to vote for his banishment, as was customary, the name of the accused was written upon a shell. A peasant who could not write, and who did not know Aristides personally, approached a stranger and requested that he would write the name of Aristides upon his shell; when the stranger asked: "Why do you vote against him; has he done you any wrong, that you are anxious to condemn him?" "No," replied the peasant, "I do not even know him; but I am tired and angry with hearing him called 'The Just.'" Then that stranger took the shell, and wrote the name Aristides upon it, and quietly and courteously returned it to the peasant. That stranger was Aristides himself.*

12 POINT 16 A 40 a 83 50

*Themistocles, though having great ability, was always working especially for his individual interest. He loved office, and was ready to do anything that would insure his election to an official position. He had great wealth and considerable influence, which he used for that purpose. He favored those who would favor him in return; like some men of to-day. About election time there are often those who are ready to grant favors in order to secure the desired object. Their money is made to flow freely, and their affability is most remarkable. This was characteristic of Themistocles.* 123456

Can you afford to miss an opportunity for the preservation of your eyesight if it is presented to you? Many years since men of study, bookkeepers, clerks, and the like were unable to obtain any relief from the strain upon their eyes caused by the constant use of paper made in an unscientific manner. After many years of experiment and study we have made a paper in which this is eliminated.

NEW SHADES IN MY LADY'S STATIONERY FOR COUNTRY AND SEASHORE EFFUSIONS.

One of the most attractive of the new shades has been called Antique Bronze. It is a very fair imitation of some verdigris-covered bronze of ancient statues and coins. Among the new shades of gray are Pearl Gray and the Gray Musketeer, both of which are neutral in tone and in contrast with most every variety of color in writing inks. Mauve and a sap green called Empire seem to be in favor, although neither of these áre as attractive as the names might indicate. In our store will be found writing material of every description

HIGHER IN QUALITY AND LOWER IN PRICE SIX DAYS IN THE WEEK.

Many business houses seem to think a good reputation is something that their customers should pay a good price for. As soon as an enviable distinction is acquired, the price of goods is advanced and the cream is skimmed as long as it rises. Our goods are recognized as the standard of the world, and yet they were never sold so cheap as the present time.

Auf keinem Gebiete waren die Fortschritte seit vier Jahrhunderten so gering wie in der Kunst des Schriftsetzens. Die hier und da in Gebrauch befindlichen Maschinen sind durchaus unvollkommen; die bei weitem größte Masse der üblichen Schrift ist noch genau der Art wie vor vierhundert Jahren. Wenn Franklin heute wieder vor dem Kasten stände, würde er nichts Neues zu lernen haben. Die Schriftgießerei ist hinter der wunderbaren Vervollkommnung der Pressen vollständig zurückgeblieben; die vergrößerte Geschwindigkeit im Schriftsetzen beruht ausschließlich in der Vermehrung der Kästen. Alle Bemühungen, diesem Uebelstande abzuhelfen, gingen darauf hinaus, Setzmaschinen zu erfinden, statt die Art und Weise des Handsetzens zu verbessern. Eins der Haupthindernisse, welches den Setzmaschinen im Wege stand, ist die Nothwendigkeit, mit der Hand zu „justiren". Daran scheiterte hauptsächlich die Einführung dieser Maschinen. Es liegt daher auf der Hand, daß jeder

Ungebeten und ungewarnt nimmt sie uns in den Umlauf ihres Tages auf und treibt sich mit uns fort, bis wir ermüdet sind und ihrem Arme entfallen. Sie schafft ewig neue Gestalten; was da ist, war noch nie; was war, kommt nicht wieder — Jedes ist neu und doch immer das Alte. Wir leben mitten in ihr und sind ihre Freunde. Sie spricht unaufhörlich mit uns und verrät uns ihr Geheimnis nicht. Wir wirken beständig auf sie ein und haben doch keine Gewalt über sie. Große und heilige Natur! in deinen Hallen wandelt der Mensch und lernt von Stauden und Bäumen; sein Auge ruht wie ein Fühlhorn am blauen Himmel, und sucht nach dem, nach welchem sich sein Herz in der Brust ausstreckt. Dann wird er selbst zum Priester dieses Tempels eingeweiht; mit Thränen endet er die Feierlichkeit. Durch Menschenliebe predigt er andern Menschen, durch Trost, durch Mitleid und Hülfe.—Wer kann die unendliche Liebe nicht fühlen, die über uns ausgespannt ist, und uns auf dieser Welt mit Zärtlichkeit gefangen

Auf keinem Gebiete waren die Fortschritte seit vier Jahrhunderten so gering wie in der Kunst des Schriftsetzens. Die hier und da in Gebrauch befindlichen Maschinen sind durchaus unvollkommen; die bei weitem größte Masse der üblichen Schrift ist noch genau der Art wie vor vierhundert Jahren. Wenn Franklin heute wieder vor dem Kasten stände, würde er nichts Neues zu lernen haben. Die Schriftsetzerei ist hinter der wunderbaren Vervollkommnung der Pressen vollständig zurückgeblieben; die vergrößerte Geschwindigkeit im Schriftsetzen beruht ausschließlich in der Vermehrung der Kästen. Alle Bemühungen, diesem Uebelstande abzuhelfen, gingen darauf hinaus, Setzmaschinen zu erfinden, statt die Art und Weise des Handsetzens zu verbessern. Eins der Haupthindernisse, welches den Setzmaschinen im Wege stand, ist die Nothwendigkeit, mit der Hand zu „justiren". Daran scheiterte hauptsächlich die Einführung dieser Maschinen. Es liegt daher auf der Hand, daß jeder Plan zur Verbesserung unserer Setz-Methoden in erster Linie die Justirung zu vereinfachen hat, denn da dies der Punkt ist, um den sich die Sache

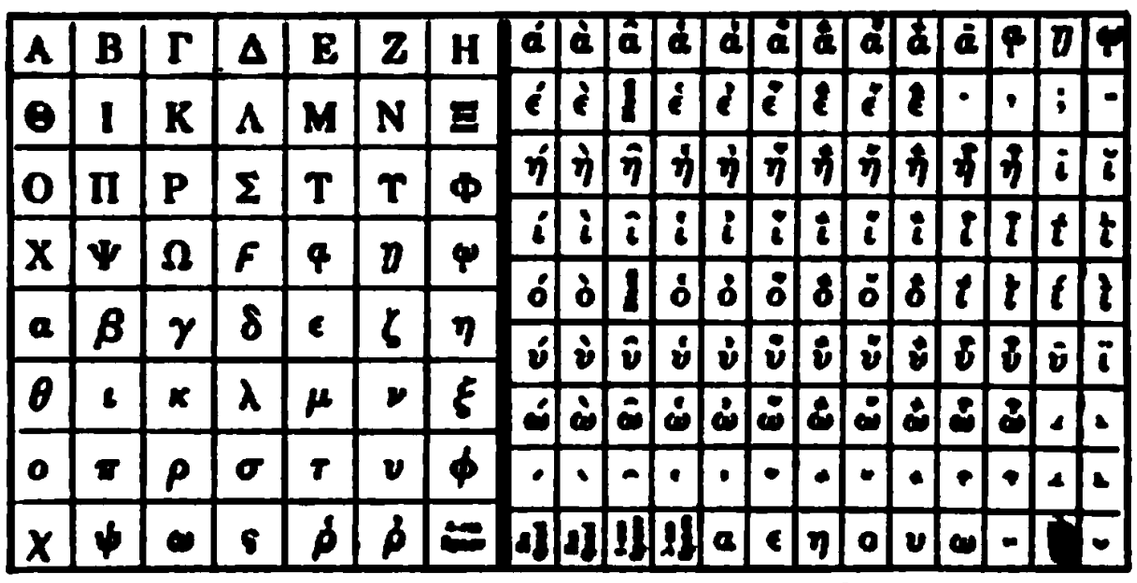
# SMALL FONTS OF PORSON AND HEAVYFACE GREEK

PLAN OF PATENTED GREEK CASE



Price of Greek Case, full size, $2.00

The want of a small font of Greek type is often felt in printing offices. To meet this need, the American Type Founders Company now puts up small and complete assortments (to include all of the characters used in the largest fonts of Porson Greek), together with a case for same of its own devising. No variations in the assortment or weight of these small fonts will be made. For prices, see specimens. Regular fonts of 50 pounds and upwards will be furnished at pound prices. Sorts are charged at pound rates in quantities; the minimum charge is 75 cents net. For school examination papers, paragraphs, quotations, etc., these small fonts will prove most useful.

## INFORMATION RESPECTING GREEK TYPE

The Greek Alphabet contains twenty-four letters: seventeen consonants and seven vowels. The only duplicate characters are σ and ς, the latter being used as a final letter only. The accents and breathings are:

| | | | | |
|---|---|---|---|---|
| ᾽ Smooth | ῾ Rough | ᾴ Smooth acute | ᾲ Rough grave | ¨ Diæresis |
| ´ Acute | ` Grave | ᾄ Smooth grave | ᾆ Smooth circumflex | ΅ Diæresis acute |
| ῀ Circumflex | | ᾔ Rough acute | ᾖ Rough circumflex | ῁ Diæresis grave |

The sign of interrogation is made by a [;], the colon by an inverted full point [·]; the other points are the same as in English. The kerned letters are seldom required, and are only supplied to a font to make up any deficiency in accented sorts. Accented caps have the accent before them, thus [῍Ω]. The figures used are the same as in English, and are *not* put up with job fonts.

Compositors should bear in mind that no accent can be placed over any other than one of the last three syllables of a word. The grave accent never occurs but on the last syllable; this being the case, the rough grave [ᾲ] and smooth grave [ᾄ] can only be used for a few monosyllables. No vowels can have a breathing excepting at the beginning of the word, and ρ is the only consonant marked by a breathing. Almost every word has an accent, but very few more than one.

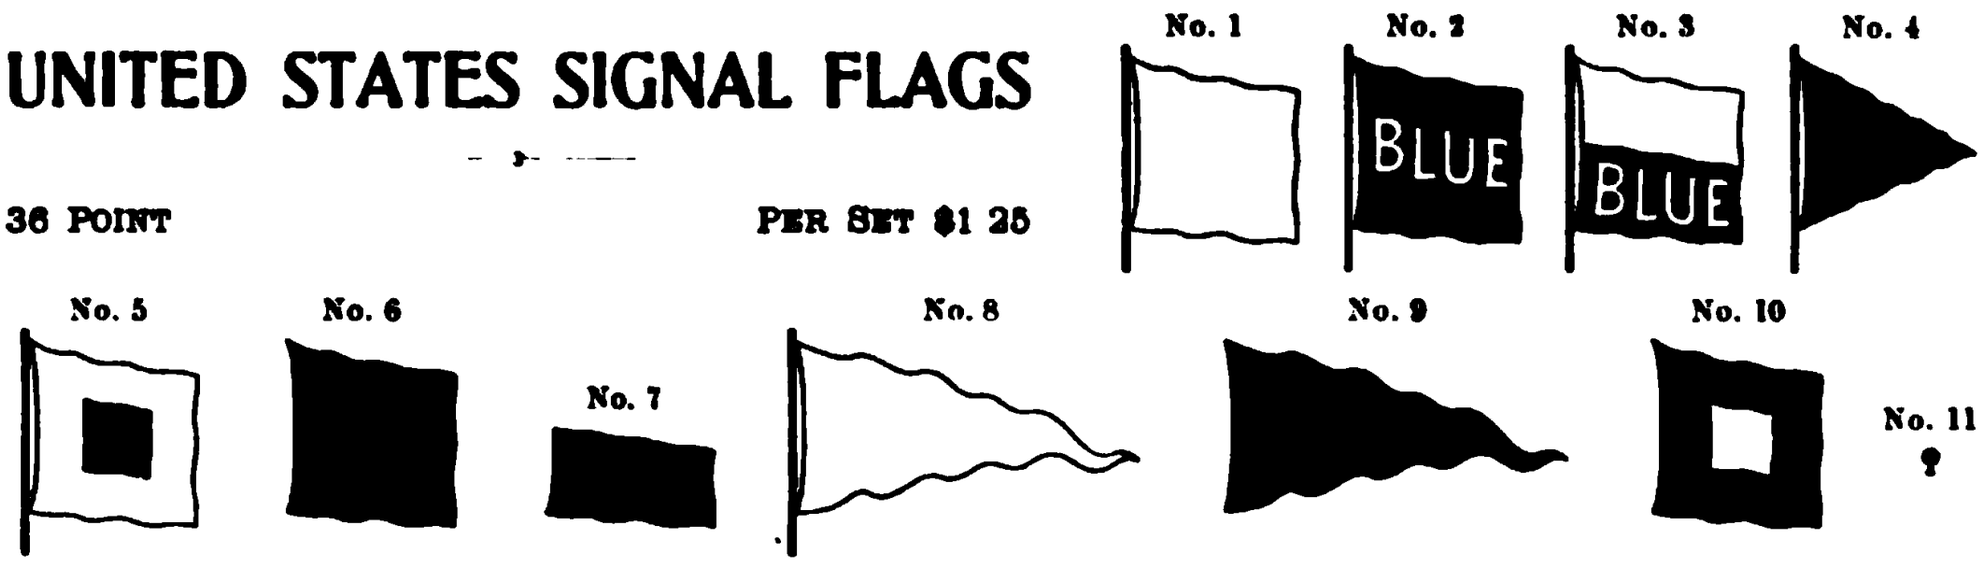
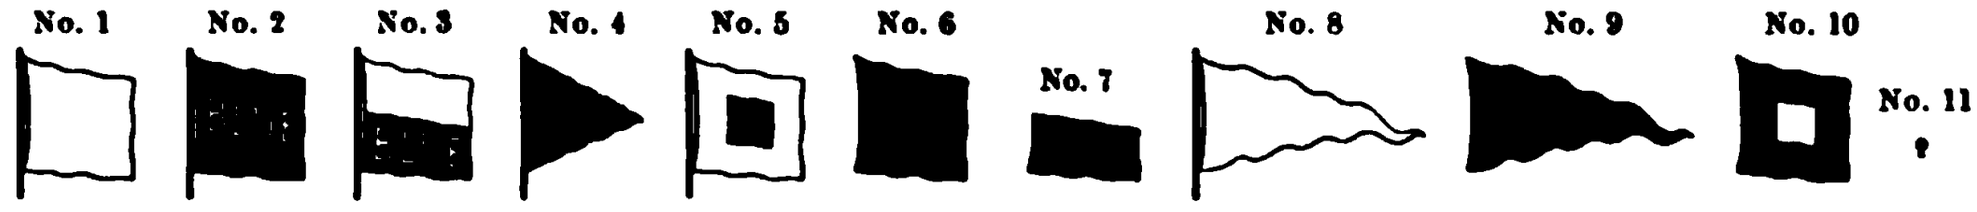
# UNITED STATES SIGNAL FLAGS

36 POINT PER SET $1 25



24 POINT PER SET $1 00



## EXPLANATION OF WEATHER SIGNALS

*Clear or Fair Weather.*—WHITE, SQUARE FLAG. Print No. 1 in black. Displayed alone, indicates fair weather, stationary temperature; displayed with No. 4 above it, indicates fair weather, warmer; displayed with No. 4 below it, indicates fair weather, colder.

*Rain or Snow.*—BLUE, SQUARE FLAG. Use No. 2, or print No. 6 in blue over No. 1 in black. Displayed alone, indicates rain or snow, stationary temperature; displayed with No. 4 above it, indicates rain or snow, warmer; displayed with No. 4 below it, indicates rain or snow, colder.

*Local Rain.*—WHITE AND BLUE, SQUARE FLAG. Use No. 3, or print No. 7 in blue over lower half of No. 1 in black. Displayed alone, indicates local rain, stationary temperature; displayed with No. 4 above it, indicates local rain, warmer; displayed with No. 4 below it, indicates local rain, colder.

*Temperature Signal.*—BLACK, TRIANGULAR FLAG. Print No. 4 in black. Displayed in conjunction with other signals, as above described.

*Cold Wave.*—WHITE, SQUARE FLAG, BLACK CENTER. Print No. 5 in black. Displayed alone indicates temperature will fall 20° or more, to a minimum of 32° or less. When displayed with No. 1, indicates fair weather, cold wave.

## EXPLANATION OF WIND SIGNALS

*Storm.*—RED, SQUARE FLAG, BLACK CENTER. Print No. 10 in red over No. 5 in black. When displayed, indicates that storm of marked violence is expected. *Hurricane*—Indicated by two Storm Flags displayed one above the other.

*Cautionary.*—RED, SQUARE FLAG, WHITE CENTER. Print No. 10 in red over No. 1 in black. When displayed, indicates that the winds expected will not be so severe. Well-found, seaworthy vessels can meet them without danger.

*Easterly Winds.*—RED PENNANT. Print No. 9 in red over No. 8 in black. When displayed above either Cautionary or Storm Flags, indicates northeasterly winds; when below, southeasterly; when alone, that special information of storms is to be obtained by calling on Signal Officer in charge.

*Westerly Winds.*—WHITE PENNANT. Print No. 8 in black. Displayed above either Cautionary or Storm Flags, indicates northwesterly winds; below, southwesterly.

# WOOD TYPE.

*The following series are selected from our Complete Specimen Book of Wood Type, which will be forwarded on application. It contains the most up-to-date, and also all the standard, styles of Wood Type, Borders and Ornaments.*

Wood Type is priced by the letter, and sold in various sized fonts, as under. Orders for less than a font are strictly net; font orders are subject to discount. For schemes of fonts see our Specimen Book of Wood Type.

| | |
|---|---|
| 3A cap font contains 75 letters. | 3a lower-case font contains 65 letters. |
| 4A cap font contains 106 letters. | 4a lower-case font contains 90 letters. |
| 5A cap font contains 120 letters. | 5a lower-case font contains 104 letters. |

Figures are put up separately. Each font contains 26 characters, which include two $ signs.

Customers should bear in mind that End-Wood Type can be made any size desired. A wood-type letter increases in width in exactly the same proportion as it does in length. For example: If a 12-line letter is 2 inches wide, the same letter in 15-line will be 2½ inches wide, the increase being one-quarter each way.

# REVISED PRICE LIST PER LETTER.

*This Price List of Wood Type Supersedes all Others Issued by Us.*

The prices for all sizes of each style of type shown in this book can be found in this Revised Price List. The left-hand column gives the size of Type or lines Pica. The letters L, M, N, etc., at the top of table, give the class to which the letter belongs, and the figures in the different columns give the price per letter. The sizes of fonts are given above.

**Always state whether CAPS alone are wanted, or CAPS and FIGURES, or CAPS, LOWER CASE and FIGURES, or CAPS and LOWER CASE, and how large a font or number of As.**

Give full directions for shipping, unless it is desired to leave the matter to us, in which case we will ship the cheapest way, freight or express.

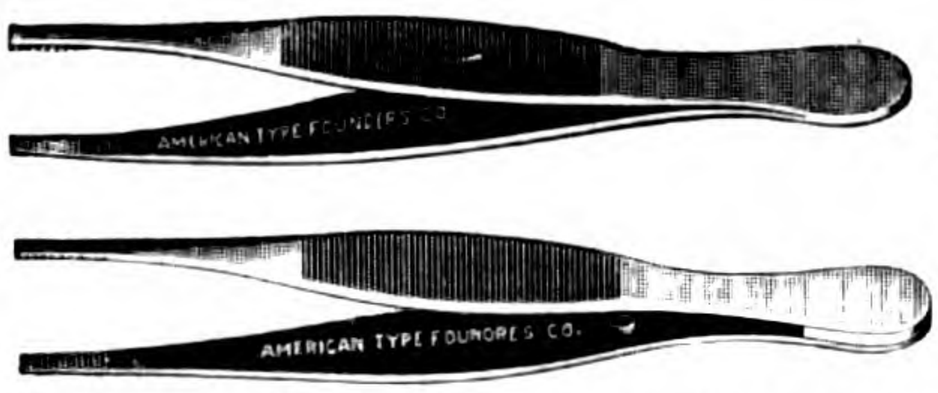
## TWEEZERS.

This is good and cheap; polished steel; Nonpareil points.

No. 11, nickel-plated, each . . . . . $0 25



This is the best Tweezer procurable at the price; file point, steel, 4 inches long.

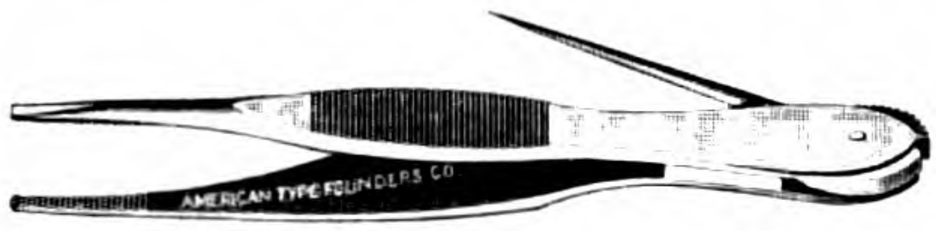
No. 5, nickel-plated, each . . . . . $0 50

These are the best made; tempered steel, nickel-plated, file-cut points and backs. No. 7 is 4 inches long; No. 8, 4¾ inches long.

No. 7, nickel-plated, 4 inches long, each . . . . . $0 75
No. 8, nickel-plated, 4¾ inches long, each . . . . . 0 85

The only Tweezer that can be carried in the pocket with comfort and safety. It locks and unlocks automatically. Hold it points down and press between fingers gently, and it unlocks; hold it points up and bring points together, and it locks securely.

No. 9. Self-locking, nickel-plated, each . . . . . $0 90



When Tweezer is in use the Bodkin folds into it. When Bodkin is required, pressure on the file-cut arc shown in cut brings it out easily, and when extended it locks securely, and is as firm as an ordinary Bodkin. This is the latest and most satisfactory combination. Patent applied for.

No. 3. Combination Tweezer and Bodkin, nickel-plated, each . . . . . $1 00

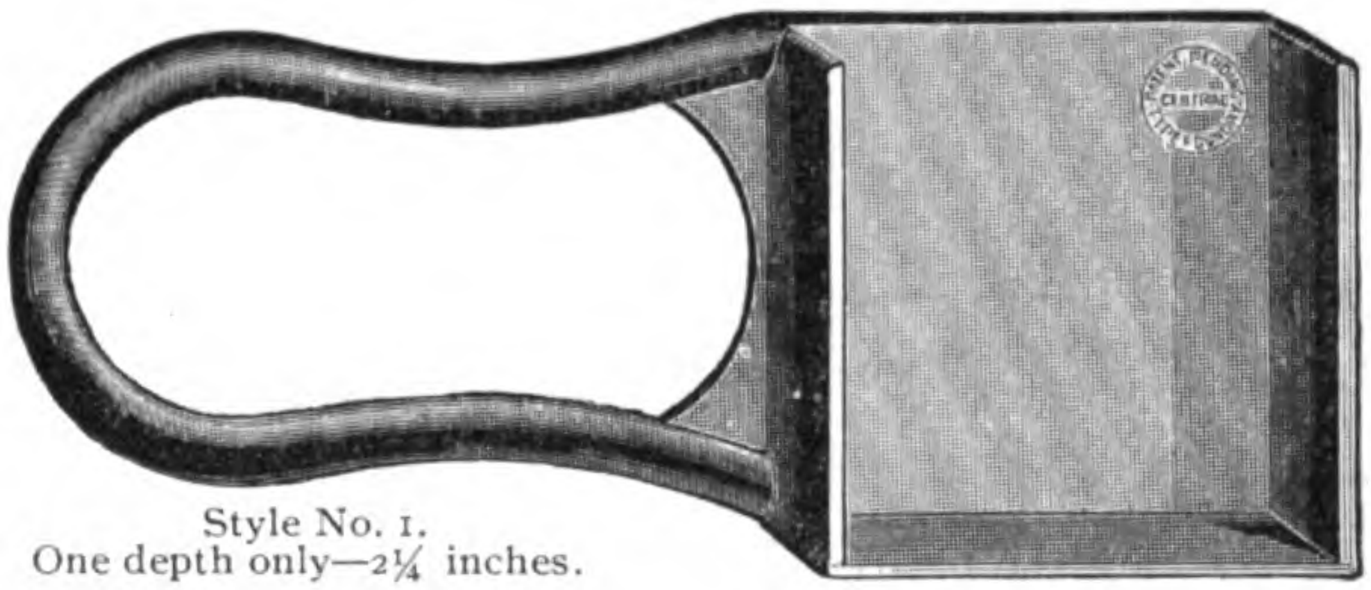
## PERFECT NEWS STICKS.



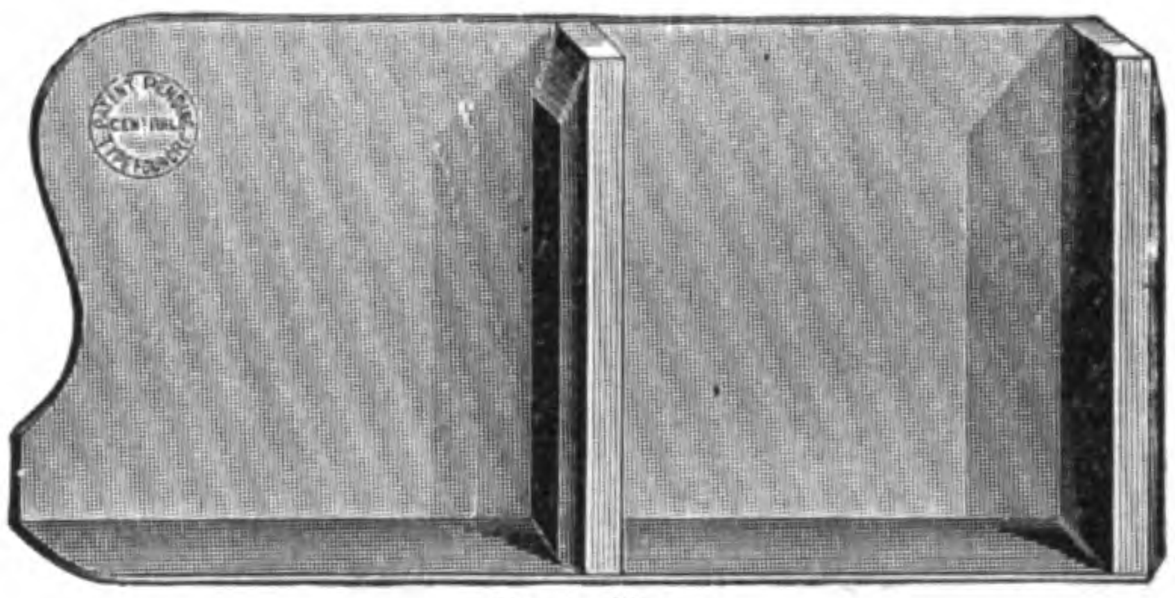
Style No. 1.
One depth only—2¼ inches.

These Sticks are made for setting one measure only, either 13 or 13½ ems Pica, and prevent all the annoyances due to variations in Sticks set inaccurately by careless compositors. It is undoubtedly the best Stick made for news measures.

Style No. 1 is made of best malleable iron; the handle and under side are japanned, so that the Stick cannot rust; the pan itself is milled out, the sides being absolutely square and rigid, and altogether the Stick is as perfect as could be desired. Made one depth—2¼ inches—only, and for 13 or 13½ ems Pica measure.

Style No. 2 is made of the best of steel, and the set bar or knee is riveted firmly to bottom and back of Stick. It is accurate in every respect.

These Sticks are made for 13 or 13½ ems Pica measure, and are 2¼ inches deep.



Style No. 2.

No. 1. Malleable Iron, milled, for 13 or 13½ ems Pica measure . . . . . $0 75
No. 2. Steel-riveted, for 13 or 13½ ems Pica measure . . . . . 0 80

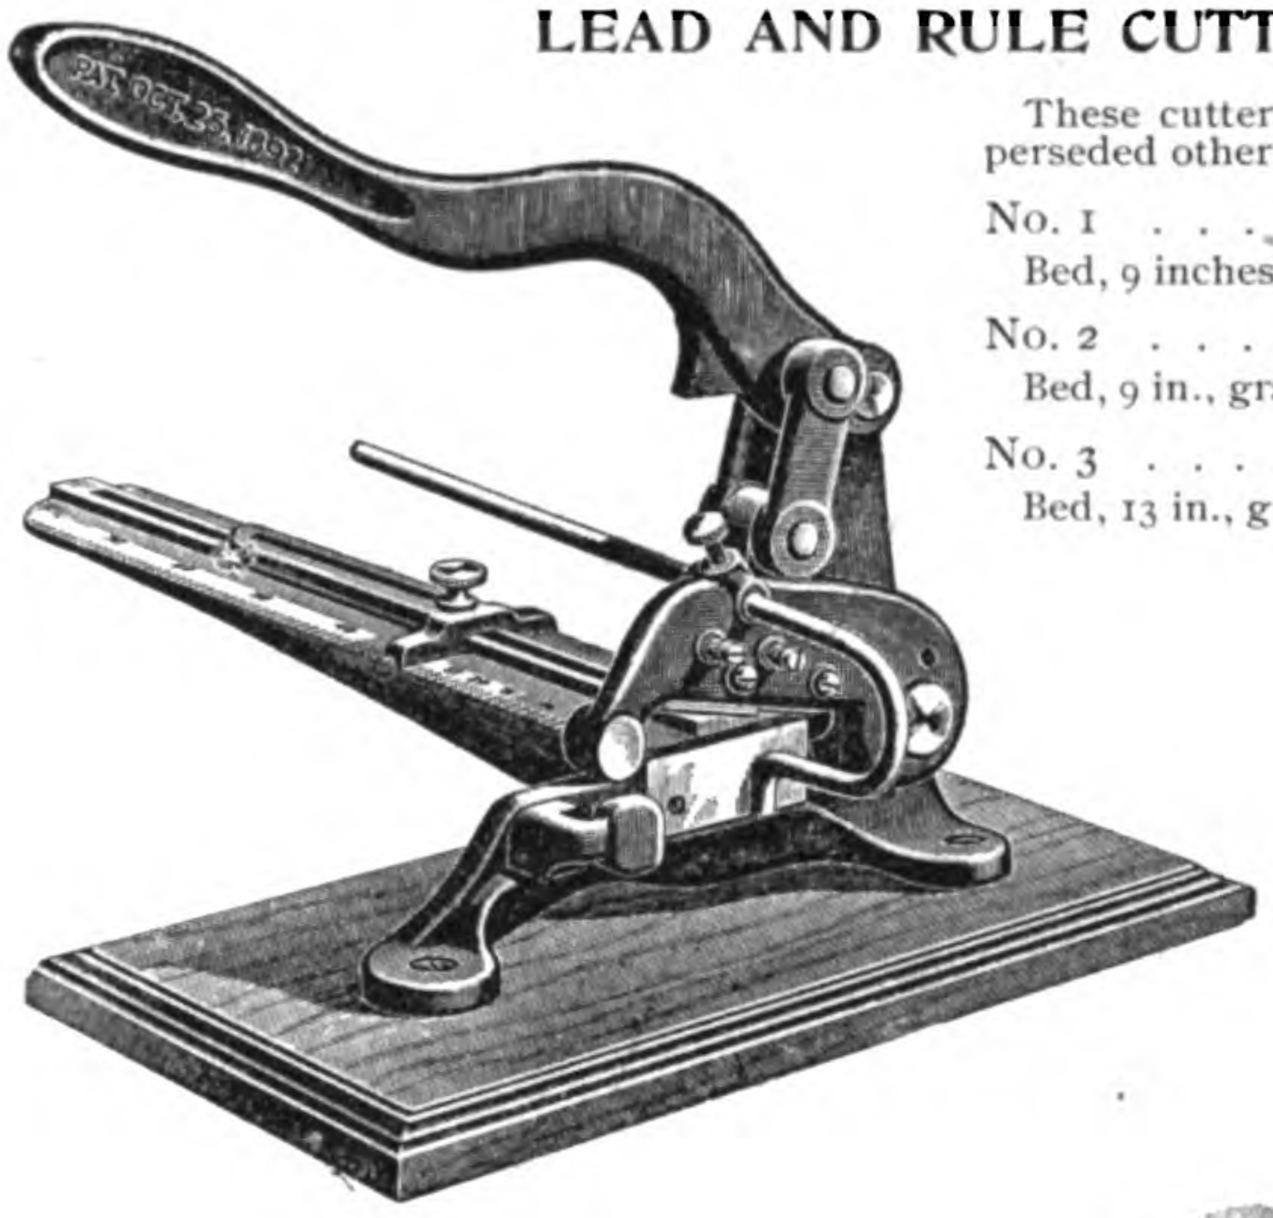
## LEAD AND RULE CUTTERS.



These cutters are the best made, and have superseded other styles all over the world.

No. 1 . . . . . $8 00
Bed, 9 inches; gauges 12 inches.

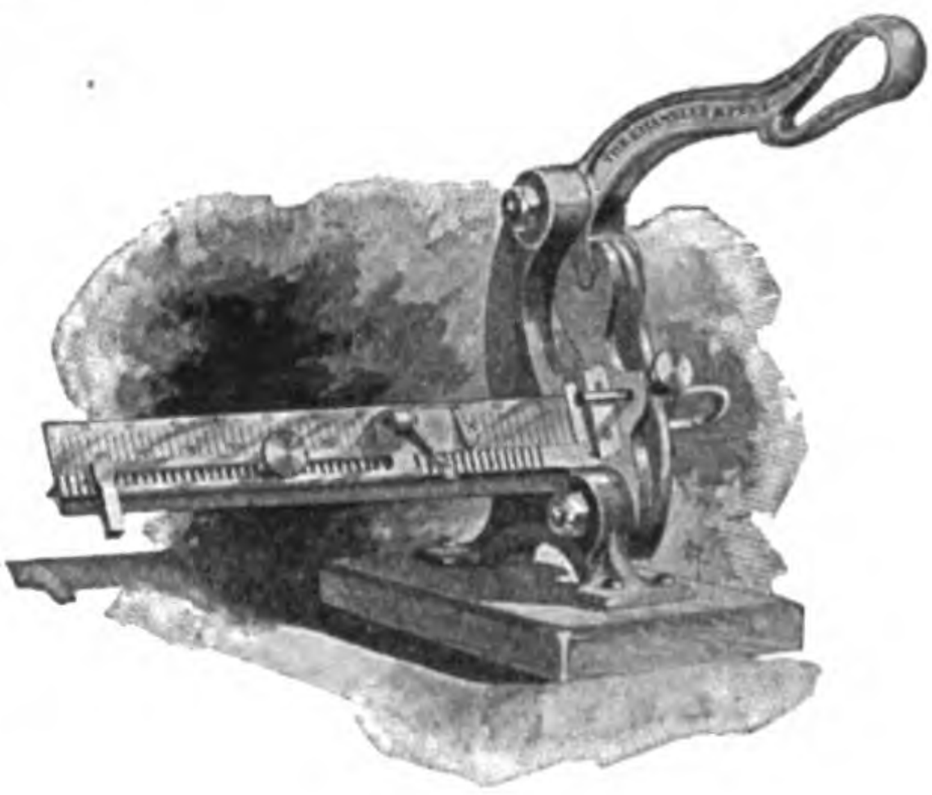
No. 2 . . . . . $9 00
Bed, 9 in., graduated to Picas; gauges 12 in.

No. 3 . . . . . $12 00
Bed, 13 in., graduated to Picas; gauges 18 in.

No. 12 . . . . . $10 00
Gauges 12½ in. at back and 11½ in. at front, graduated to Picas.

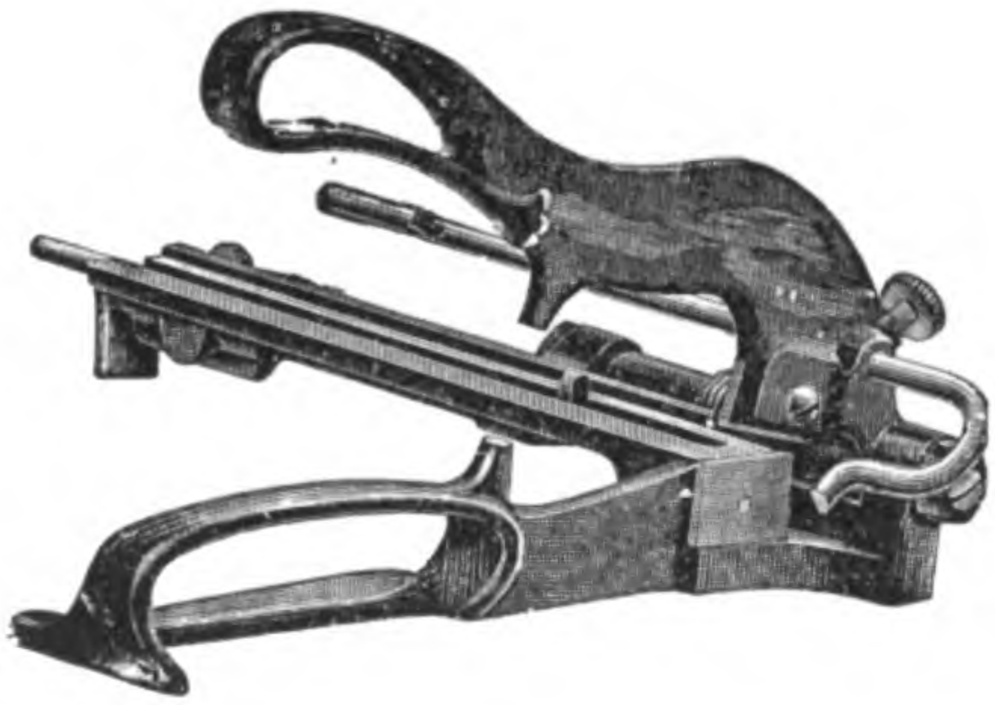
No. 18 . . . . . $14 00
Gauges 18½ in. at back and 14 in. at front, graduated to Picas.

## CHANDLER & PRICE LEAD AND RULE CUTTER.



The bed is nearly vertical, and the lead or rule drops against the gauge edge by gravity, assuring a square cut. The bed and gauge are graduated to Picas.

Gauges 14 inches . . . . . $8 00



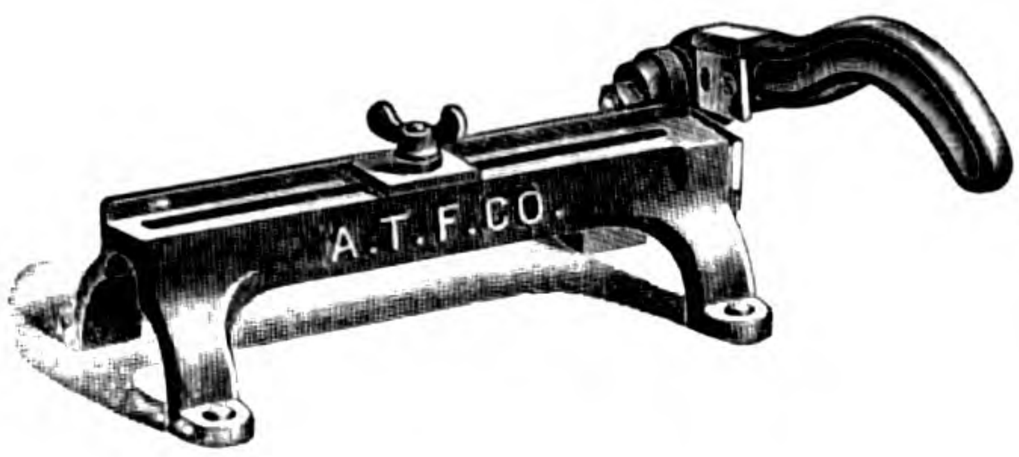
## HANDY LEAD CUTTER.

Will cut leads and slugs six points thick, and, although not recommended as a rule cutter, will cut two-point brass rule. Has back and front gauges.

Leads can be cut very rapidly and easily on this cutter by holding the lever and the hand-hold on frame in right hand, as in using hand shears. To get the best results this cutter should be screwed to bench or table.

Price . . . . . $4 00

## UTILITY LEAD CUTTER.



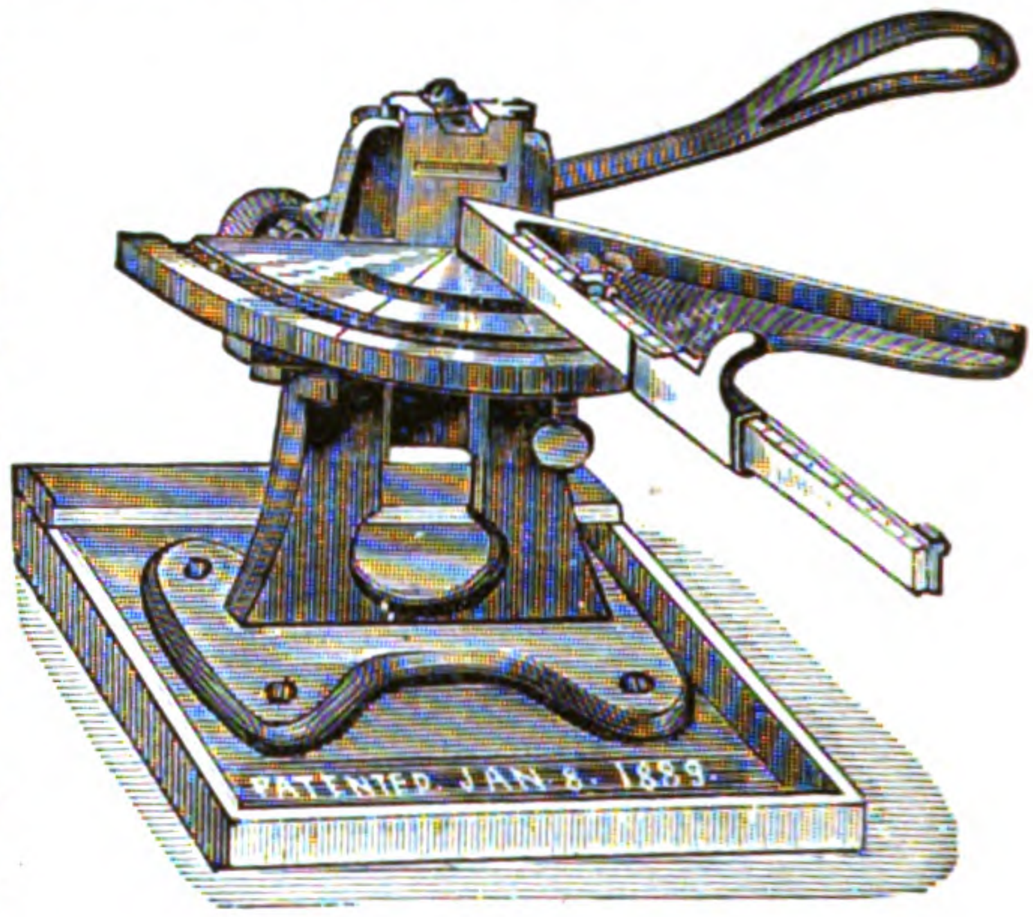
The strongest cheap Lead Cutter made. A reliable, cheap tool.

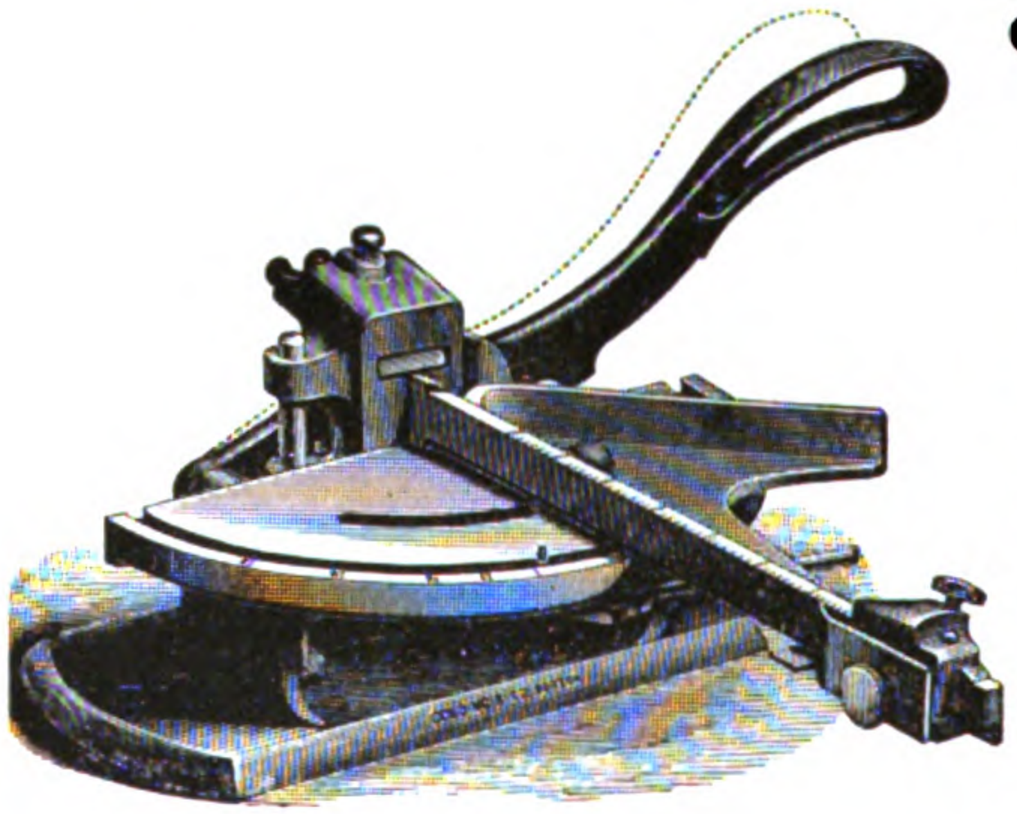
Price . . . . . $2 00

## PATENT UPRIGHT MITER MACHINE.

A strong, well-built, accurate machine. The cutting or shaving head has a positive up and down motion, and must cut as much at the bottom as at the top, as it cannot slip. The knife is regulated by set-screw. The sliding gauge is the best of its kind, enabling the operator to feed the rule up to the knife, but affords a positive check at the point where the desired length is reached. The bed is graduated, and is made movable, so that the whole cutting-edge of knife can be used. This machine is mounted in a strong, shallow, wooden box, which catches the shavings, and has at the front end an emery board on which the burr of the rules may be rubbed off.

With Sliding Gauge . . . . . $13 00
With Micrometer Point-System Gauge . . . . . 20 00





## GOLDING UPRIGHT MITERER.

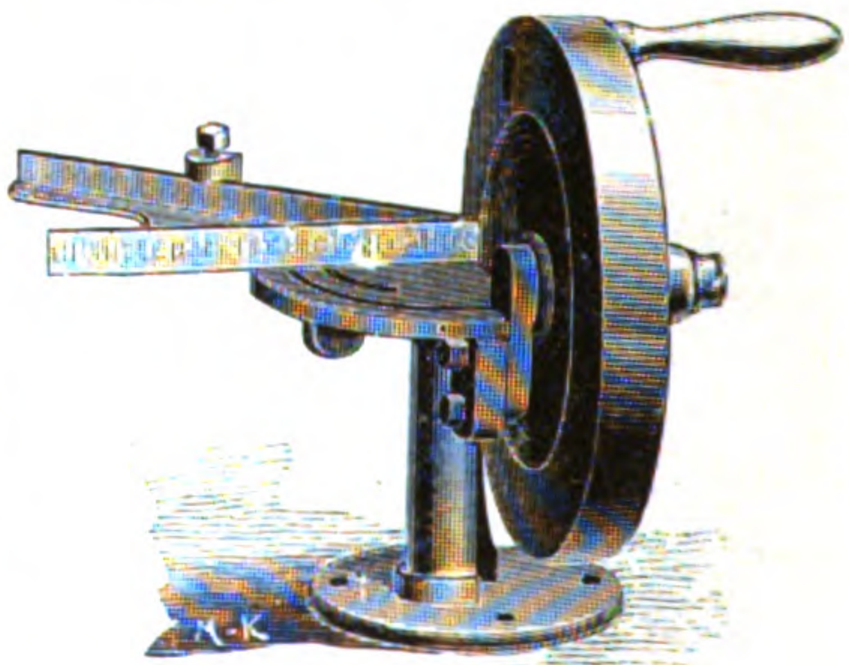
This machine differs in principle from the Patent Miterer (described on this page) in this: the rule is held stationary, and the knife is fed up to it, while in the Patent Miterer the knife is stationary and the rule is fed to it. The knife of the Golding Miterer is movable, but it is pivoted in such a way as to enable it to make a positive downward cut the same at the bottom as at the top. The knife adjustment is specially good. The bed is graduated and is made movable, so that the whole cutting-edge of the knife may be used.

Price, boxed . . . . . $14 00

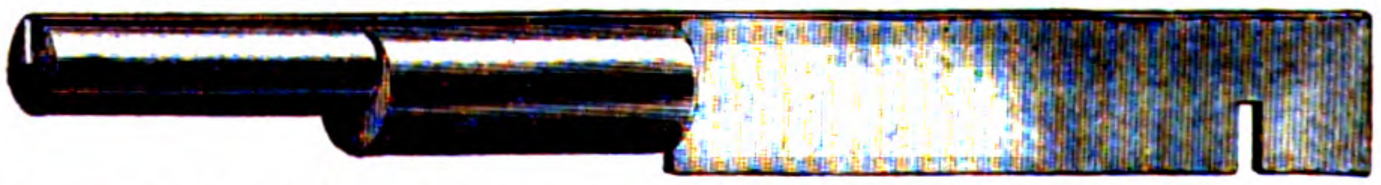
## CHANDLER & PRICE ROTARY MITERING MACHINE.

The knife is made of the best steel, and is easily removed and sharpened. By adjusting the screw at the end of the hub, the cutting wheel receives sufficient movement on the stud to readily admit of cutting rule to exact lengths.

Price, . . . . . $15 00



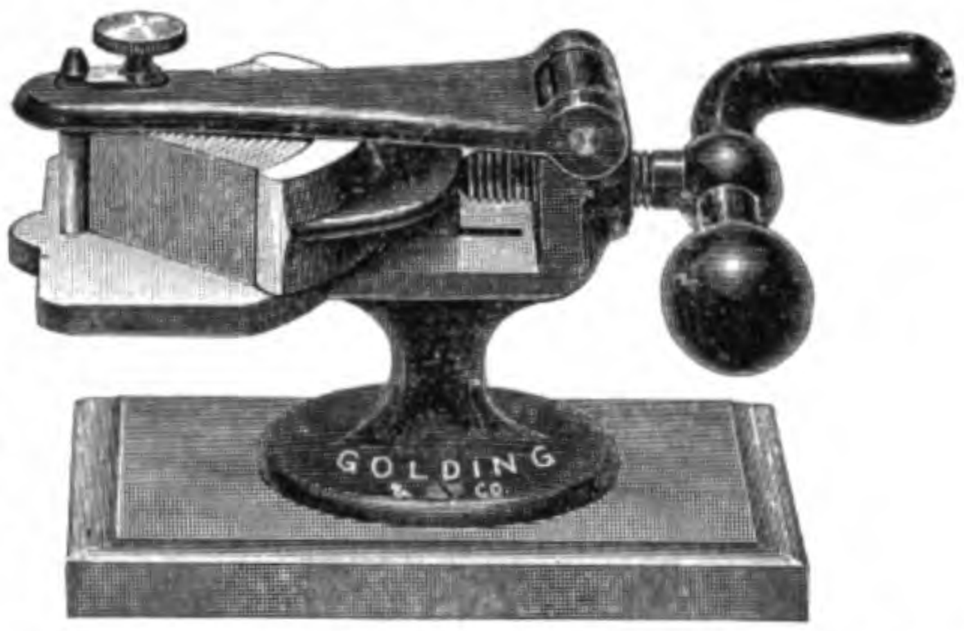
## ELITE RULE BENDER.



The blade is tool steel and the cylinders of brass. Bends rule from one to six points in thickness. The end of the rule is firmly held in the grooves in cylinder, and can be twisted into any shape.

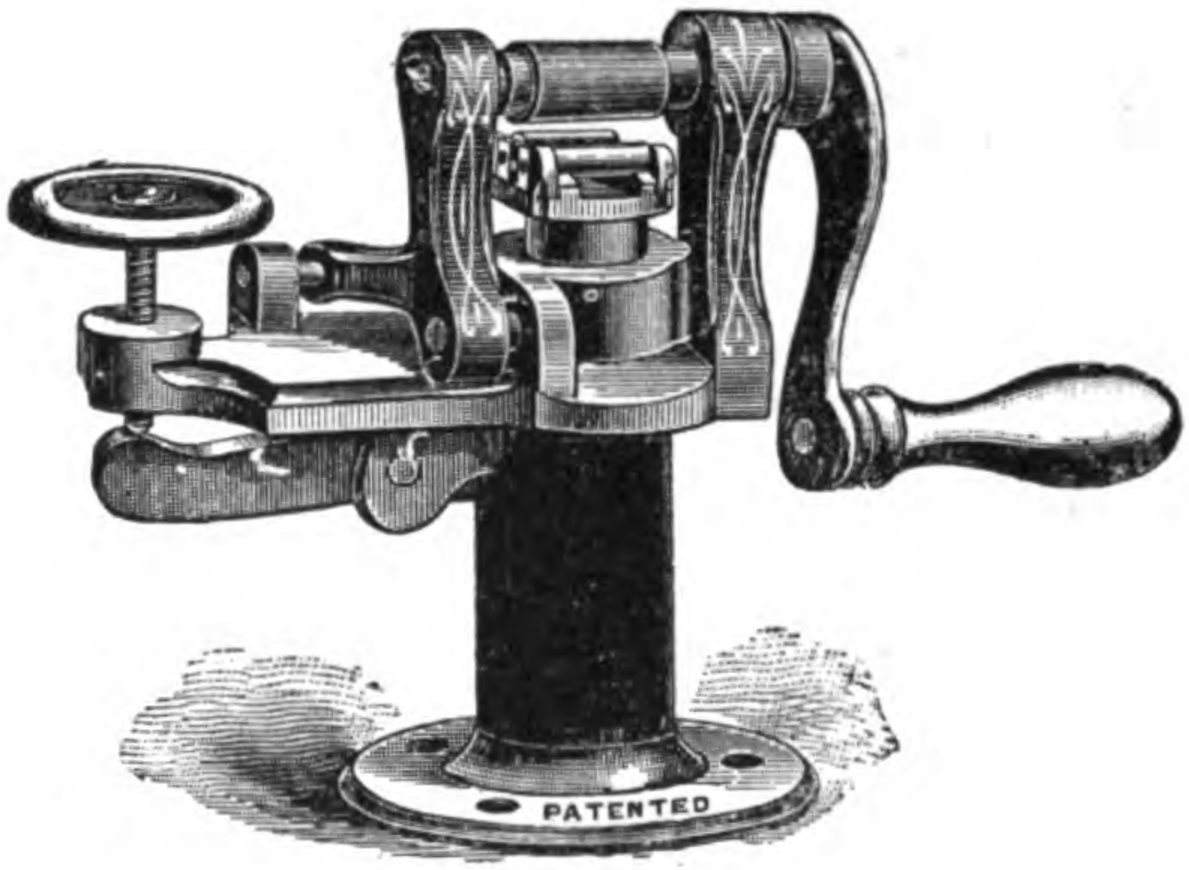
Price, with instructions for rule bending . . . . . $2 00

## GOLDING RULE-CURVING MACHINE.



This machine curves brass rule from one-quarter inch to eight inches in diameter by pressure exerted by the screw on curved brass plates, between which the rule is put at the proper place to get the required curve, as indicated by a scale engraved on the bed. Smaller curves can be made on this machine than on any other. An attachment is supplied for forming square corners as a substitute for mitered corners. Brass rule for curving or bending should be annealed. All brass rule made by us can be annealed to order at a slight extra charge.

No. 1, curves one-quarter to four inches diameter . . . . . $12 00
No. 2, curves three-eighths to eight inches diameter . . . . . 18 00
Dies for forming square corners, per set . . . . . 1 50



## PRINTERS' CURVING MACHINE.

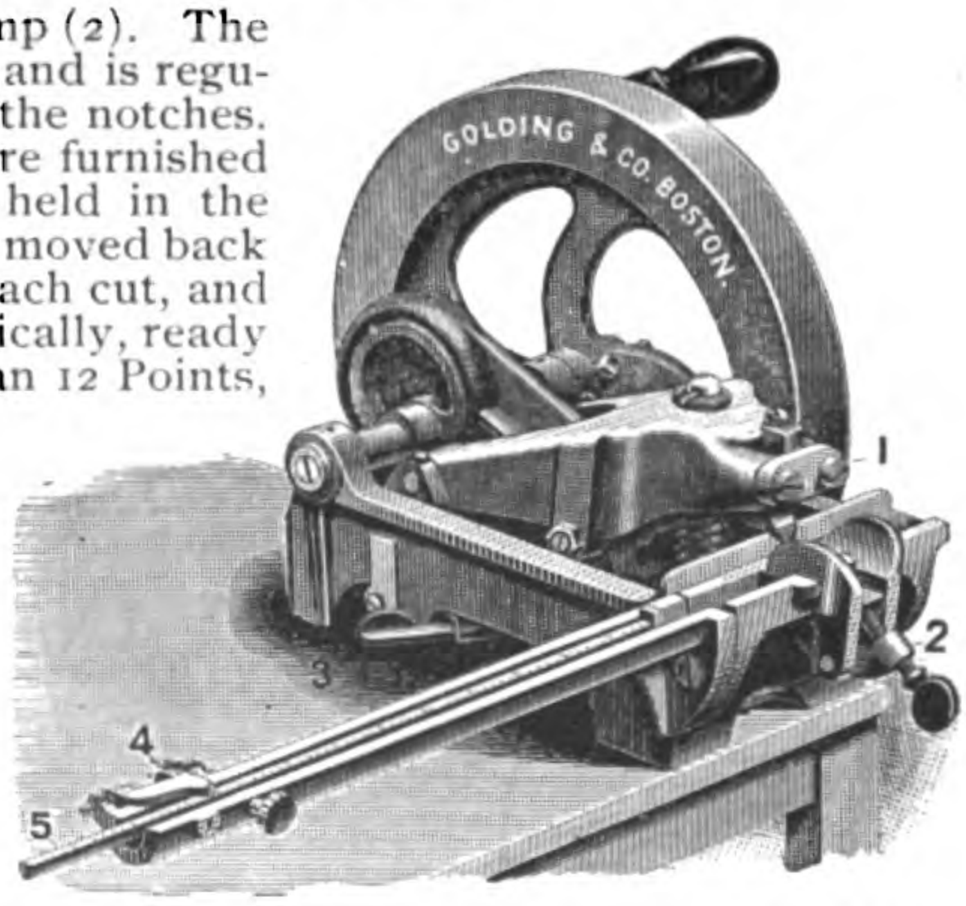
On this machine the curves are made by pressure between three iron rollers (two below and one on top), and the pressure is regulated by the screw at left hand side, which acts on a lever that raises or depresses the lower iron rollers. The action is very rapid, and, in the hands of an expert, accurate.

Price . . . . . $15 00

## LITTLE GIANT RULE SHAPER.

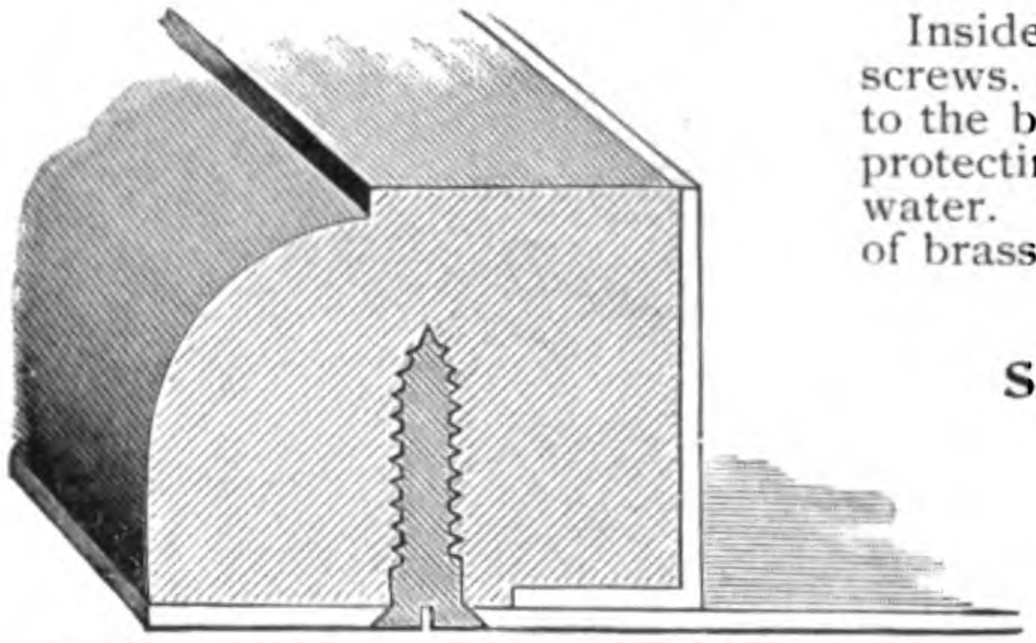
The rule is held flat on the bed by the clamp (2). The gauge (5) is graduated to Picas by notches, and is regulated by the pointer (4), which engages in the notches. Five steel cutting tools of different angles are furnished with each machine. The cutting tool is held in the head (1). By turning the wheel the cutter is moved back and forth over the rule, sinking deeper at each cut, and when it completes the cut it is lifted automatically, ready for the next cut. If the rule is thinner than 12 Points, the head (1) may be brought down to the rule by moving the lever (3). Any thickness of rule up to 12 Point may be mitered. At each cut both sides of the miter are made, and join without further trimming. This machine is not designed for trimming the ends of leads and rules, and therefore does not supersede the upright miterer; but in offices where much mitering is done it will prove a time and rule saver, as it miters very rapidly.

*Send for illustrated circular.*



Price . . . . . $35 00
Patent graduated gauge, extra . . . . . 4 00

## SMOOTH-LINED BRASS GALLEYS.



Sectional end view, showing how the brass lining protects the wood rim from action of lye and water.

Inside they are perfectly smooth and free from screws. The lining is angle brass, and is soldered to the bottom plate, strengthening the sides, and protecting the wood rim from the action of lye and water. The head is supported by a strong strip of brass.

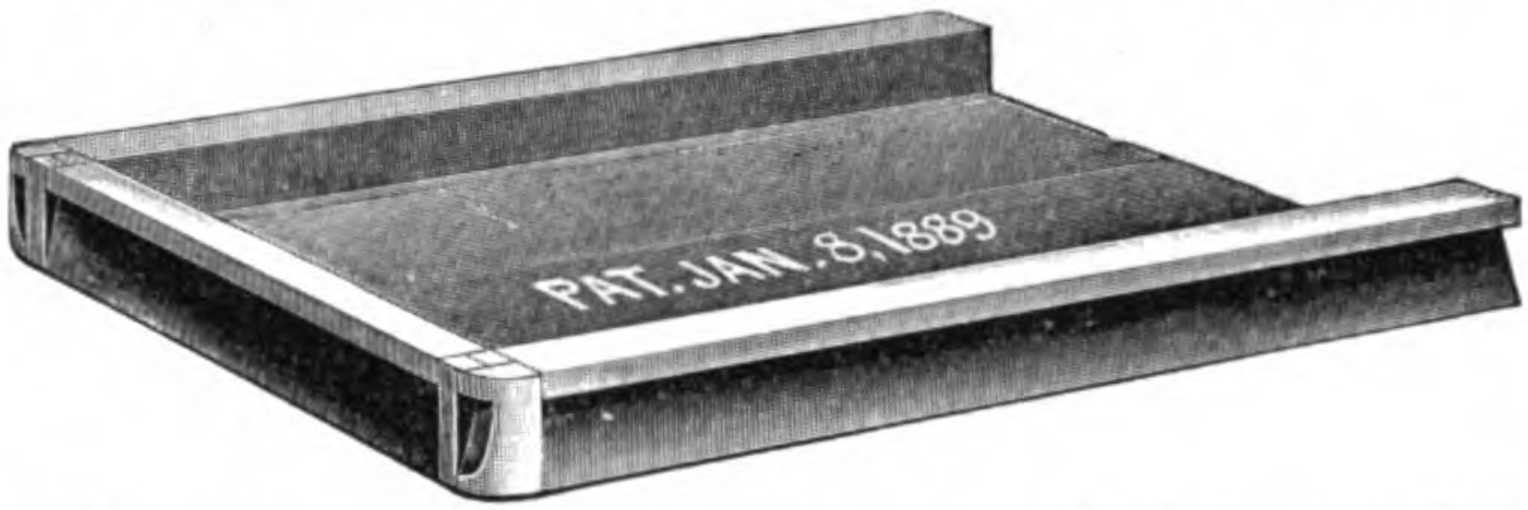
## SUCCESS RIVETED ALL-BRASS GALLEYS.



Made of heavy brass, the sides *riveted* strongly to the bottoms, and the corners locked together by a patented hold, which effectually resists all the strain of locking-up. These galleys will be found to be a great improvement over those galleys with bottoms screwed to the sides. The list prices remain the same as charged for galleys with bottom secured by screws. These galleys have been the standard for quality and construction for several years, and are still unexcelled.

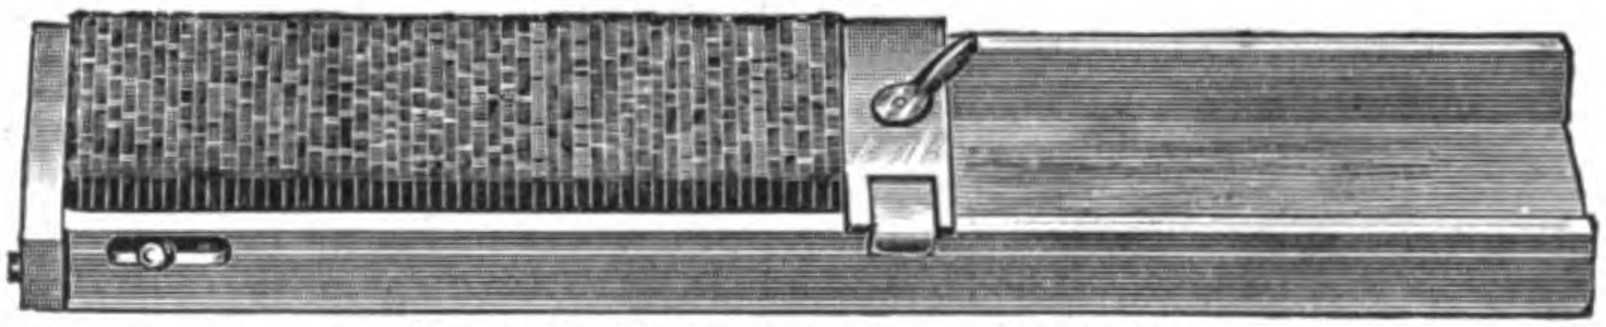
## LINCOLN ALL-BRASS GALLEYS.



Shows the Galley locked at end and side.

A good galley for newspaper work. *Made to order* to hold any regular widths of matter in regular use in an office. The upper side or rim of galley is strongly hinged to the bottom. This hinged side is dropped when emptying on galley, and when matter is ready for locking up the side is raised and is held by a spring-catch at head of galley and by the end clamp which locks the sides and end at the same operation. The catch is loosened by turning lever to the right. These galleys are about one inch wider than the width of column they are made to take.

## LAING PATENT GALLEY LOCK-UP.

**Attachable to all Brass, Smooth Lined, and Patent Lined Galleys.**

A satisfactory, simple, effective lock-up. It may be screwed on any galley; the side stick (which is not beveled) is attached to the lock-up, and has a parallel motion. It is locked or unlocked by pushing the lever up or down by means of a finger knob. The lock-up and the side stick are made of brass.

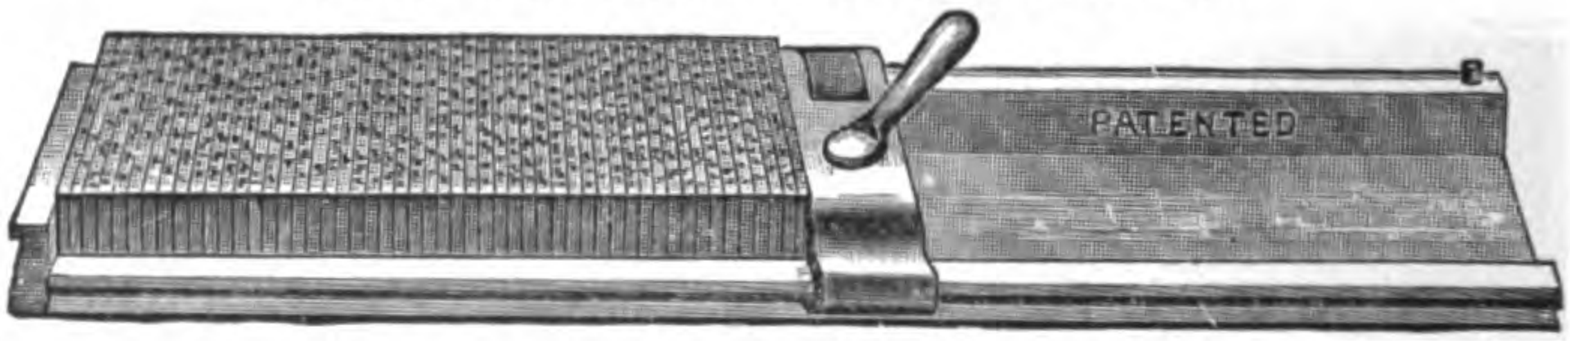
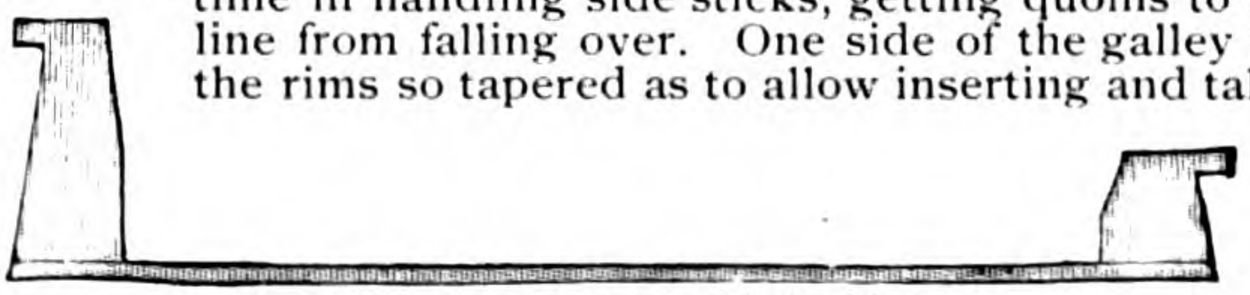
*If Galley Lock-up is sold separately, the necessary screws for attaching to galley are included in prices given.

## PATENT LINOTYPE GALLEY.



This new patent galley is made solely for linotypes, and is the only galley for holding linotype slugs without any side lock-up. A foot clamp is attached to each galley to hold up the matter in taking proofs. This galley will save all the trouble and the loss of time in handling side sticks, getting quoins to fit, or foot slugs to keep the end line from falling over. One side of the galley is made lower, and the inside of the rims so tapered as to allow inserting and taking out the linotype slugs from the side very readily. The galley being only one-half of an inch wider than the matter, is conveniently handled and can be placed on the stone, rack or case without taking up valuable space. On a crowded imposing table, in the rush of making-up, the saving of space is of great importance.



End view, 13 ems wide inside.

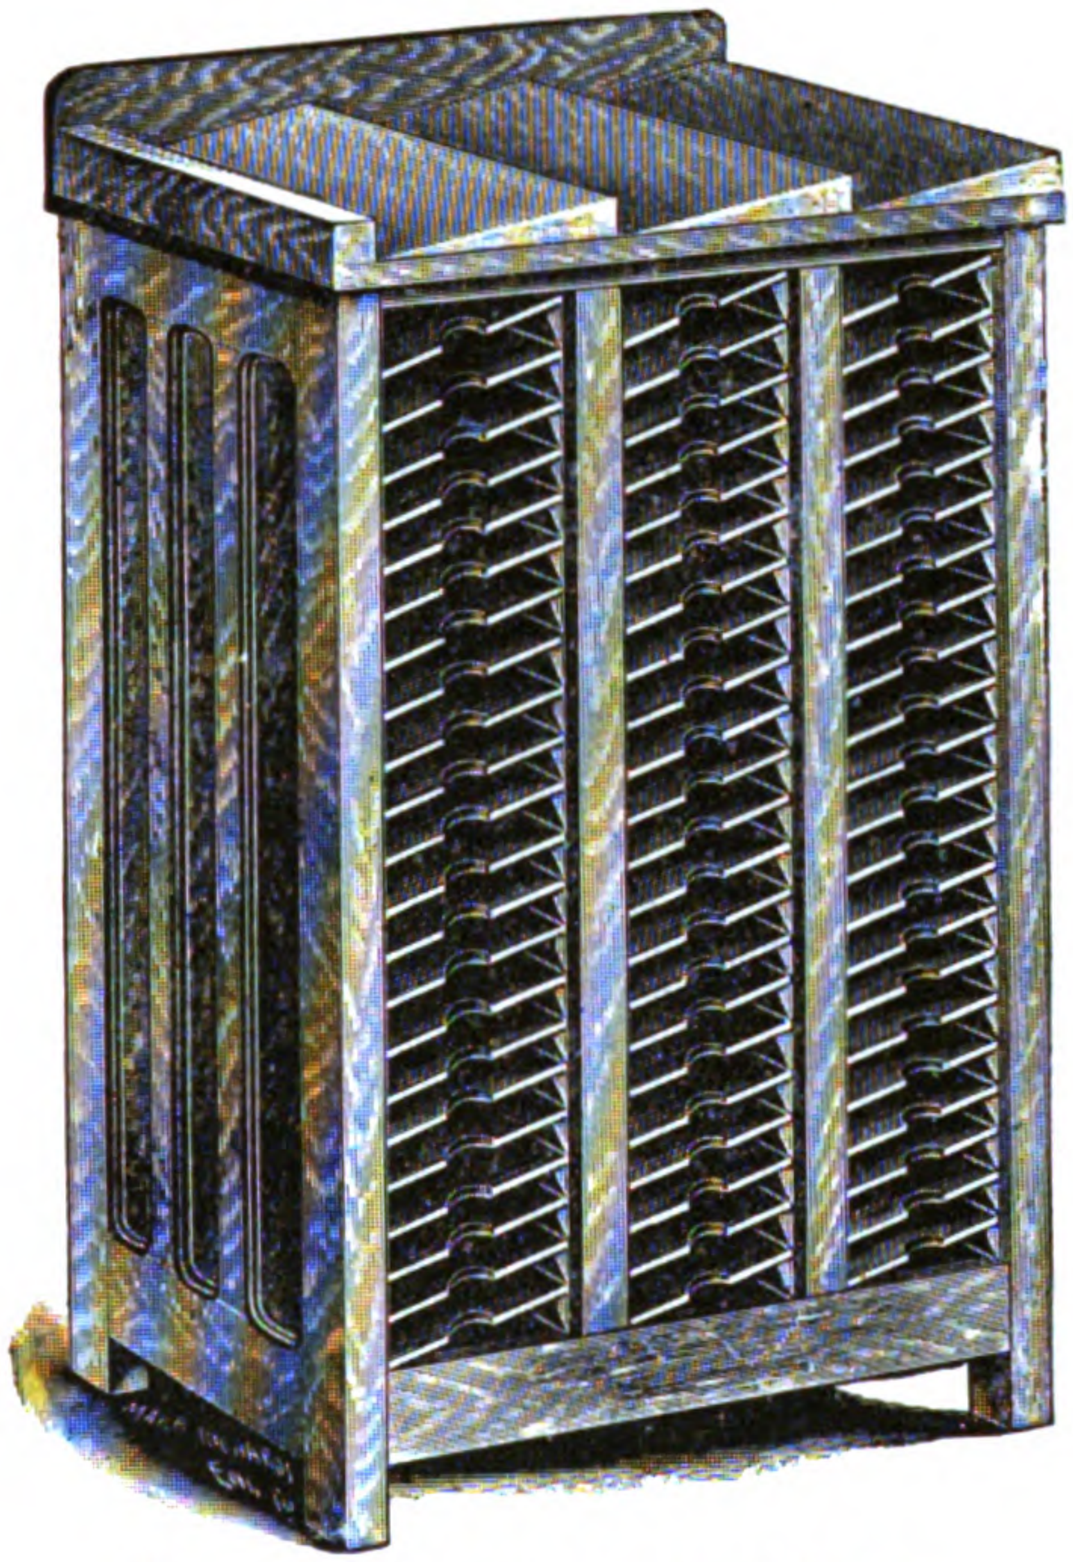
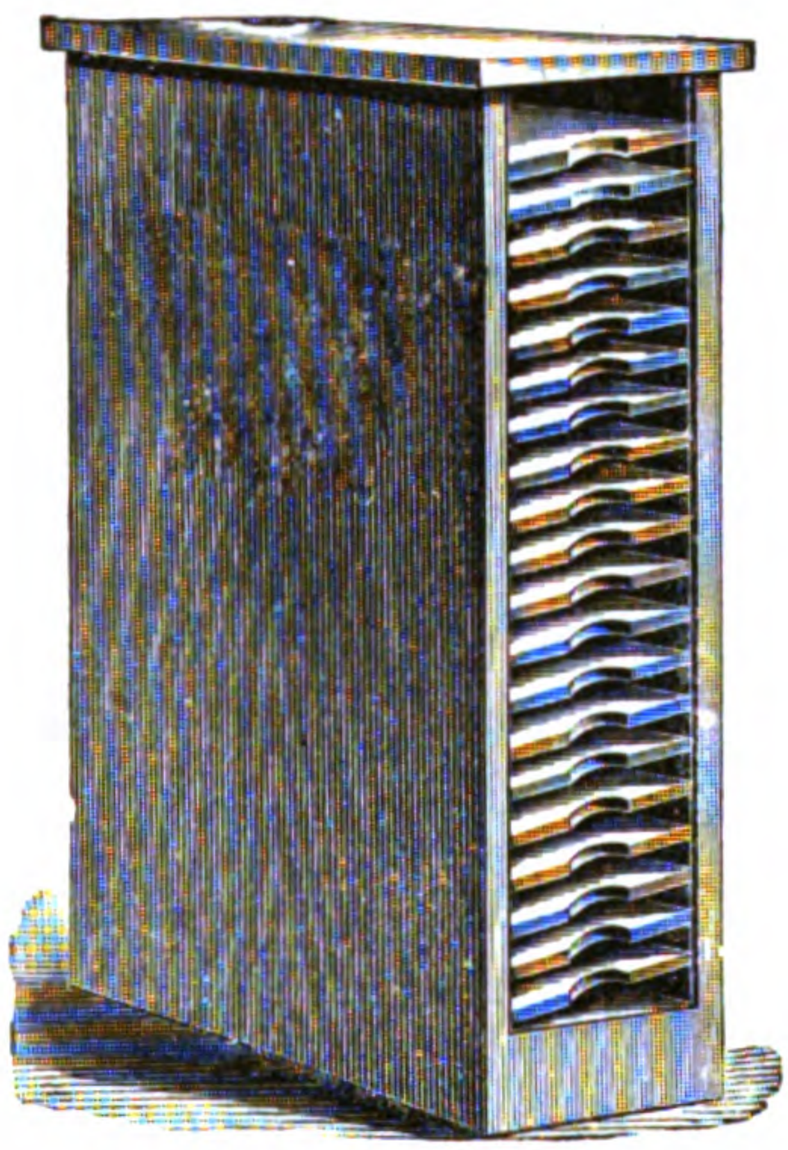
# GALLEY CABINETS.

**Made in Hard Wood, Cherry Finish.**



Three-tier Galley Cabinet with Galley Top, to hold Sixty-six Galleys.



One-tier Flat-top Galley Cabinet, to hold Twenty Galleys.

Particular attention is directed to the Galley Cabinets of larger capacity. They are very desirable in the larger offices, and are designed to carry an immense weight of type safely. All these Cabinets are made of hard wood. All Flat-top Cabinets are made same style as the One-tier Cabinet illustrated above. All Galley-top Cabinets same as the Three-tier Cabinet shown on this page.

The "Galley-top" Cabinets are of much stronger construction than the "Flat-top," and may be ordered with or without galley top, as desired, at the same prices.

## BROWER QUOIN LOCK.

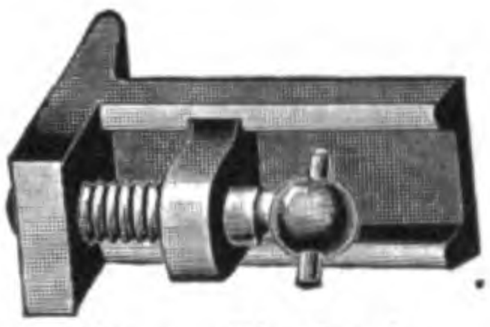

Fig. 2. The Lock.

The sidewise projection shown in Fig. 2 engages in notches cut in central rib of Union Lockable Quoin, or in the rack teeth of the Brower Quoin (see opposite page). The screw is then set up against the other half of the quoin, effectually preventing it from slipping. Quoins of the wedge principle are all liable on long runs to be loosened by the vibrations of the press. These locks make the lock-up doubly sure. They should be applied by the pressman after he has completed the make-ready and before the run is commenced.

## MIDGET SAFETY QUOIN.

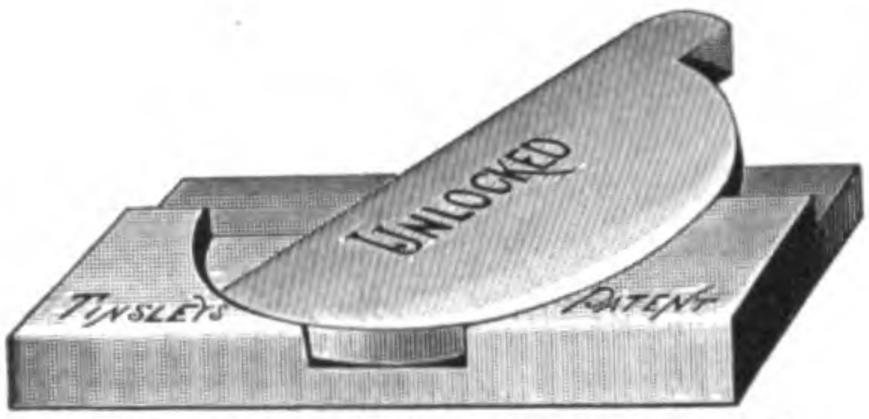

Fig. 3 shows Midget Quoin unlocked.

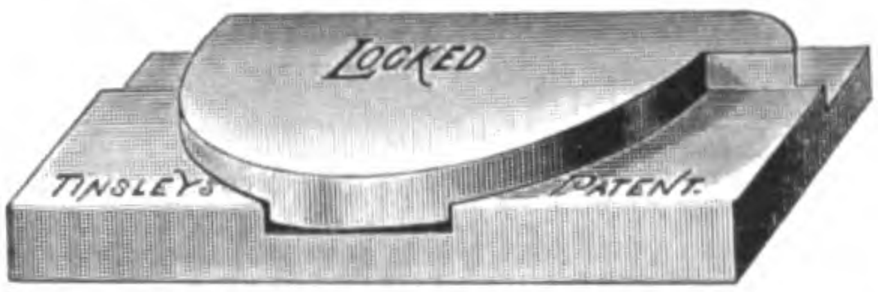

Fig. 2. This cut shows extreme expansion of six points when locked.

Midget Quoins are made of hard brass.

Midget Quoins give a safe lock-up in a width of 18 points.

Midget Quoins are useful for locking a form within a form.

It is locked by a tap of a mallet, and occupies no more space in length when locked than when unlocked.

Can be used in a space 18 points wide by 120 points long, either outside or inside a form. It is absolutely safe, as when locked it rests against its corresponding flat surfaces, and the harder the surface it bears against the better.

This invaluable quoin may be used to lock up matter inside a brass circle, or oval, or within a solid border, or in places where no other quoin of wood or metal can be used.

Fig. 1 illustrates how this quoin is used in a mortised cut.

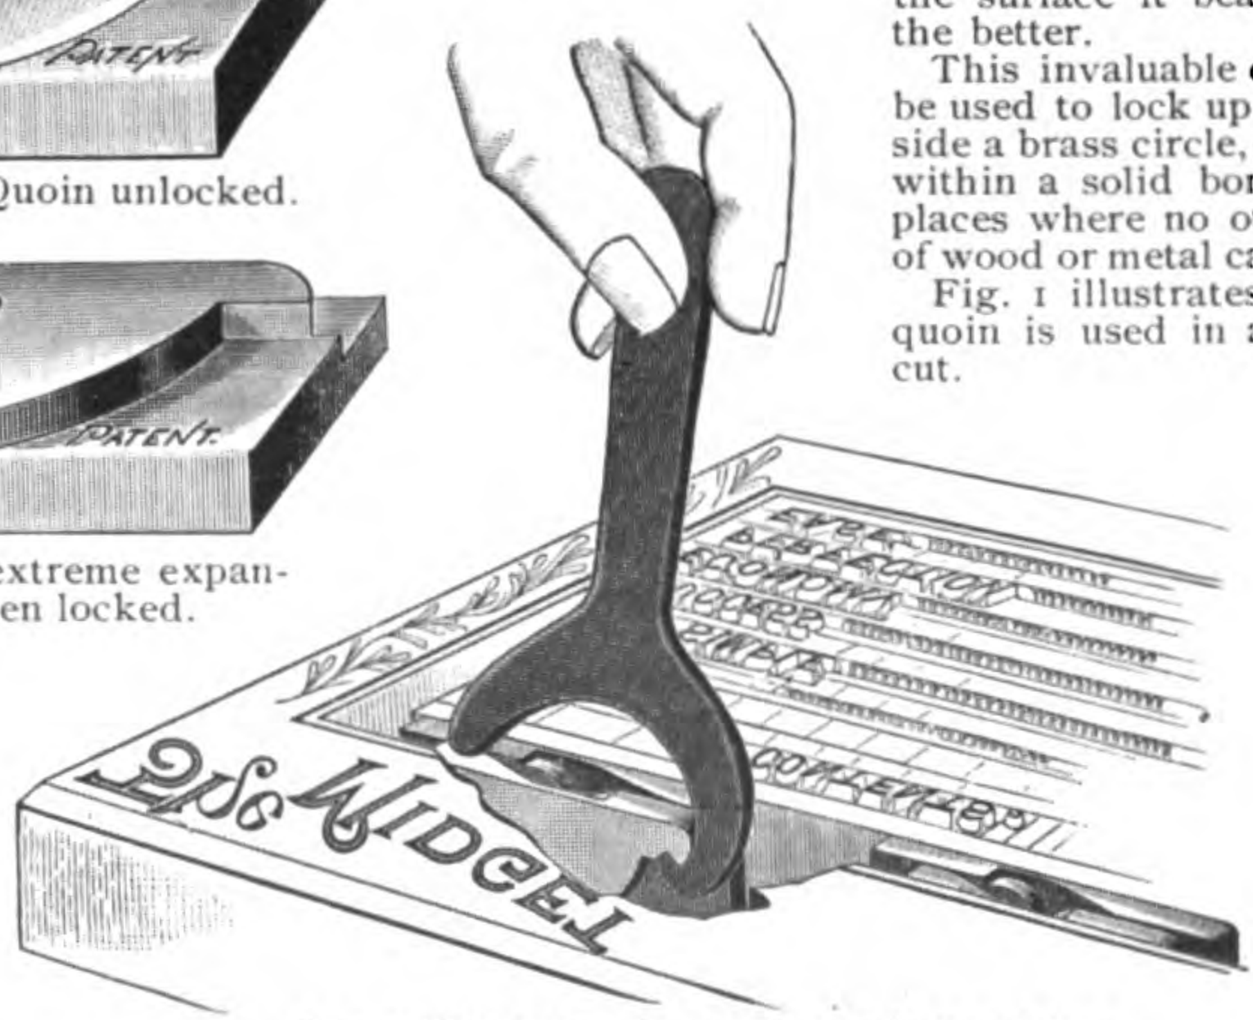

Fig. 1 illustrates the method of unlocking.

## STEREOTYPE CHASES.

### The Best Made.

These stereotype chases are made in the most accurate manner, exactly type-high, perfectly square and true. The side lock-up screw is attached to the side stick with a collar in such a manner as to enable the operator to lock-up and unlock the chases with the wrench, drawing the side stick back and forward instantly, thus saving much time and avoiding the use of shooting stick and mallet, and consequent injury to the side stick.

Prices, according to size, on application.

**Lock-up Wrenches for Stereotype Chases** . . . . . Price, **$2 50**

## MAKE-UP TABLES.

These tables are used for making-up and carrying forms either to the beating table or matrix-rolling machine (or elevator, if the stereotype room is not on the same floor with the composing room), and are very substantially built of hard wood with patent double-roller revolving casters. The iron top is either smoothed off or covered with brass—the latter being preferred by the leading newspaper offices.

# IMPOSING TABLES AND MARBLE STONES.

Square-leg Imposing Table.

Square-leg imposing tables are made of hard wood, varnished and bolted together. Round-leg imposing tables are made of hard wood, cherry finish, and are bolted together. Tables over six feet in length have six legs (see illustration below). The larger tables have two drawers, one at each end, and the smaller one drawer, which pulls out both sides. A "coffin" is a hard wood frame which serves as a bed for the stone, protects its edges, and affords a rest for galleys when used for sliding off matter.

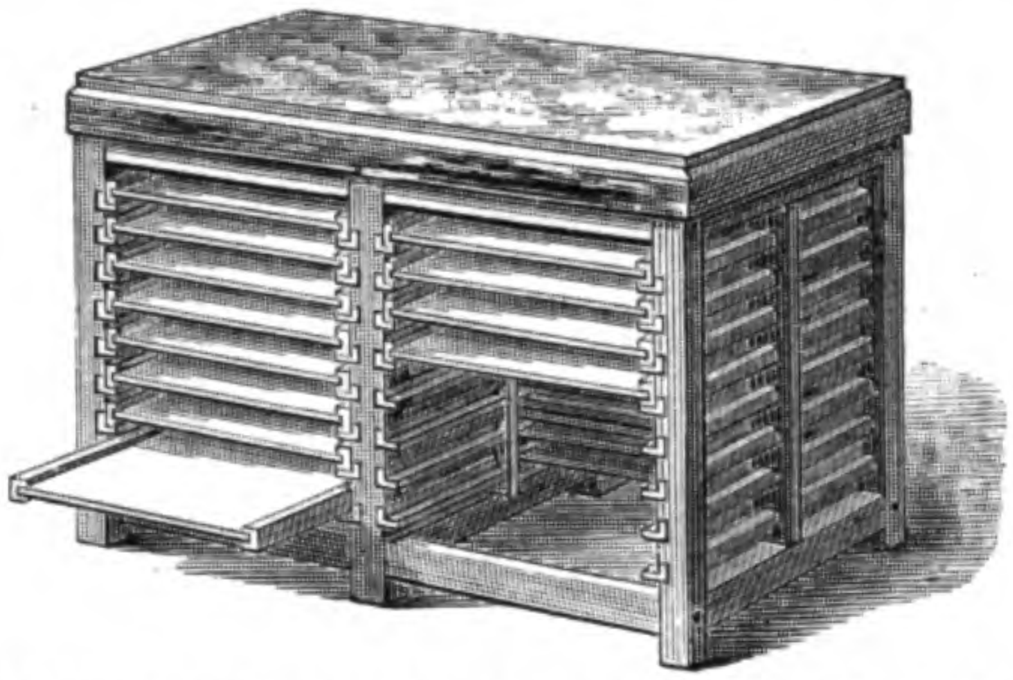
Round-leg Imposing Table.

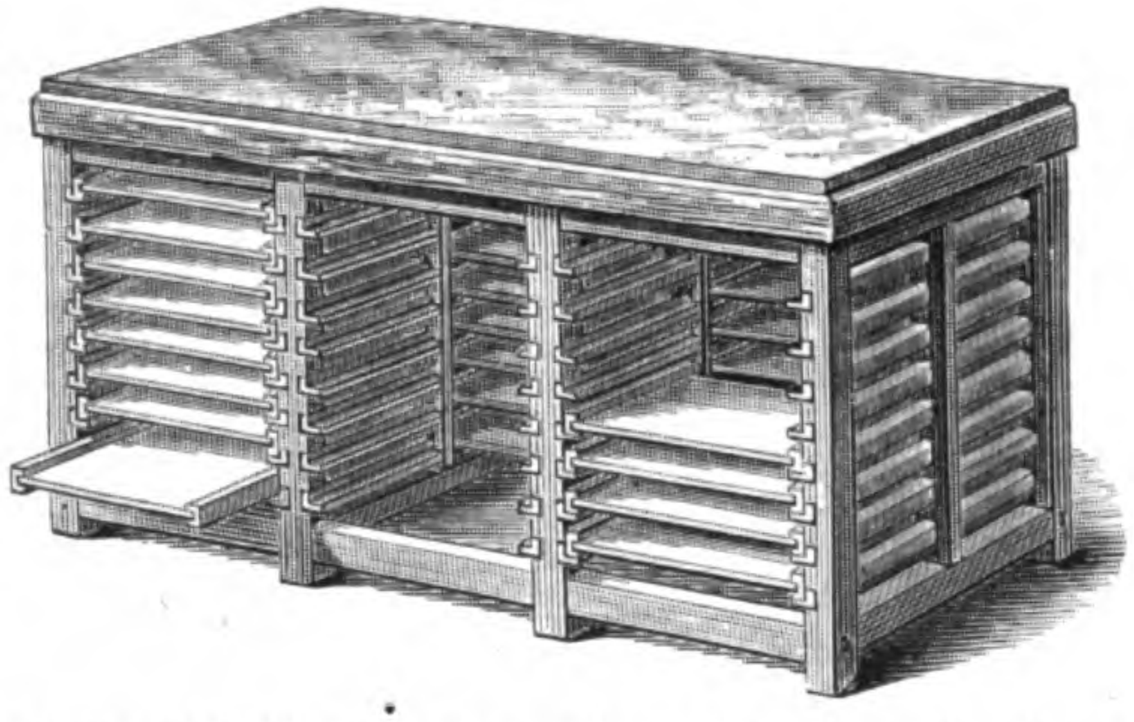
# IMPOSING TABLES WITH LETTER BOARDS.



No. 9. With 36×60-inch Marble Top; has thirty-two Letter Boards, each 17½ × 26 inches inside.

No better disposition of the space underneath an imposing table can be made than to use it for letter boards. If the type is dead, it is shifted from the stone to the board without loss of time; if the matter is alive, it is handy for imposition.

These tables are made in the most substantial manner, of hard wood, varnished, and strongly and firmly bolted together. The boards are made of hard wood, closed at sides and back, and are rabbeted in front to receive galley when sliding off type.



No. 10. With 40×80-inch Marble Top; has 48 Letter Boards, each 19½ × 22½ inches inside.

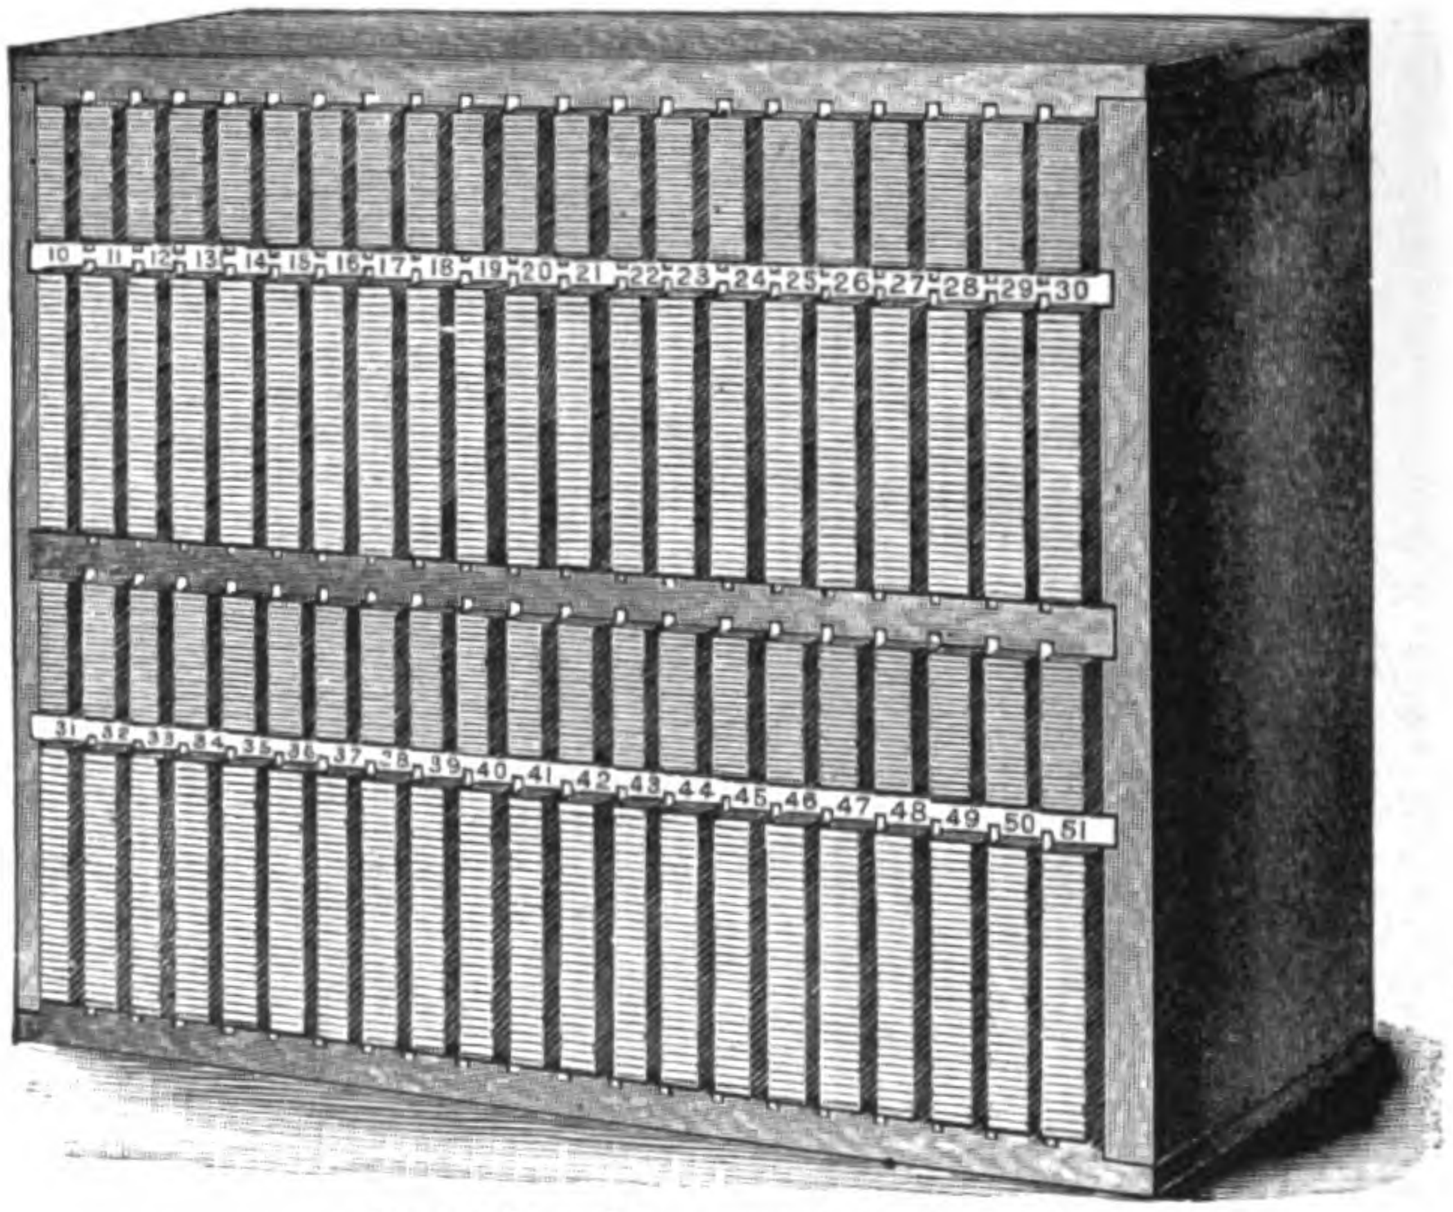
## LABOR-SAVING REGLET CASES.



Reglet Case No. 4. 2100 pieces, **$8 00.**

Nos. 3, 4, 5, 6 are made same style as above illustration. The reglet lies flat, and varies by ems up to 51 ems, and by 5 ems in longer lengths. Nos. 1 and 2 are square boxes, in which reglet is put in on end, and varies by 10 ems up to 60 ems, with 72 and 120 ems added in the No. 2 case. One-half the pieces in each case are Pica body; the other half, Nonpareil body.

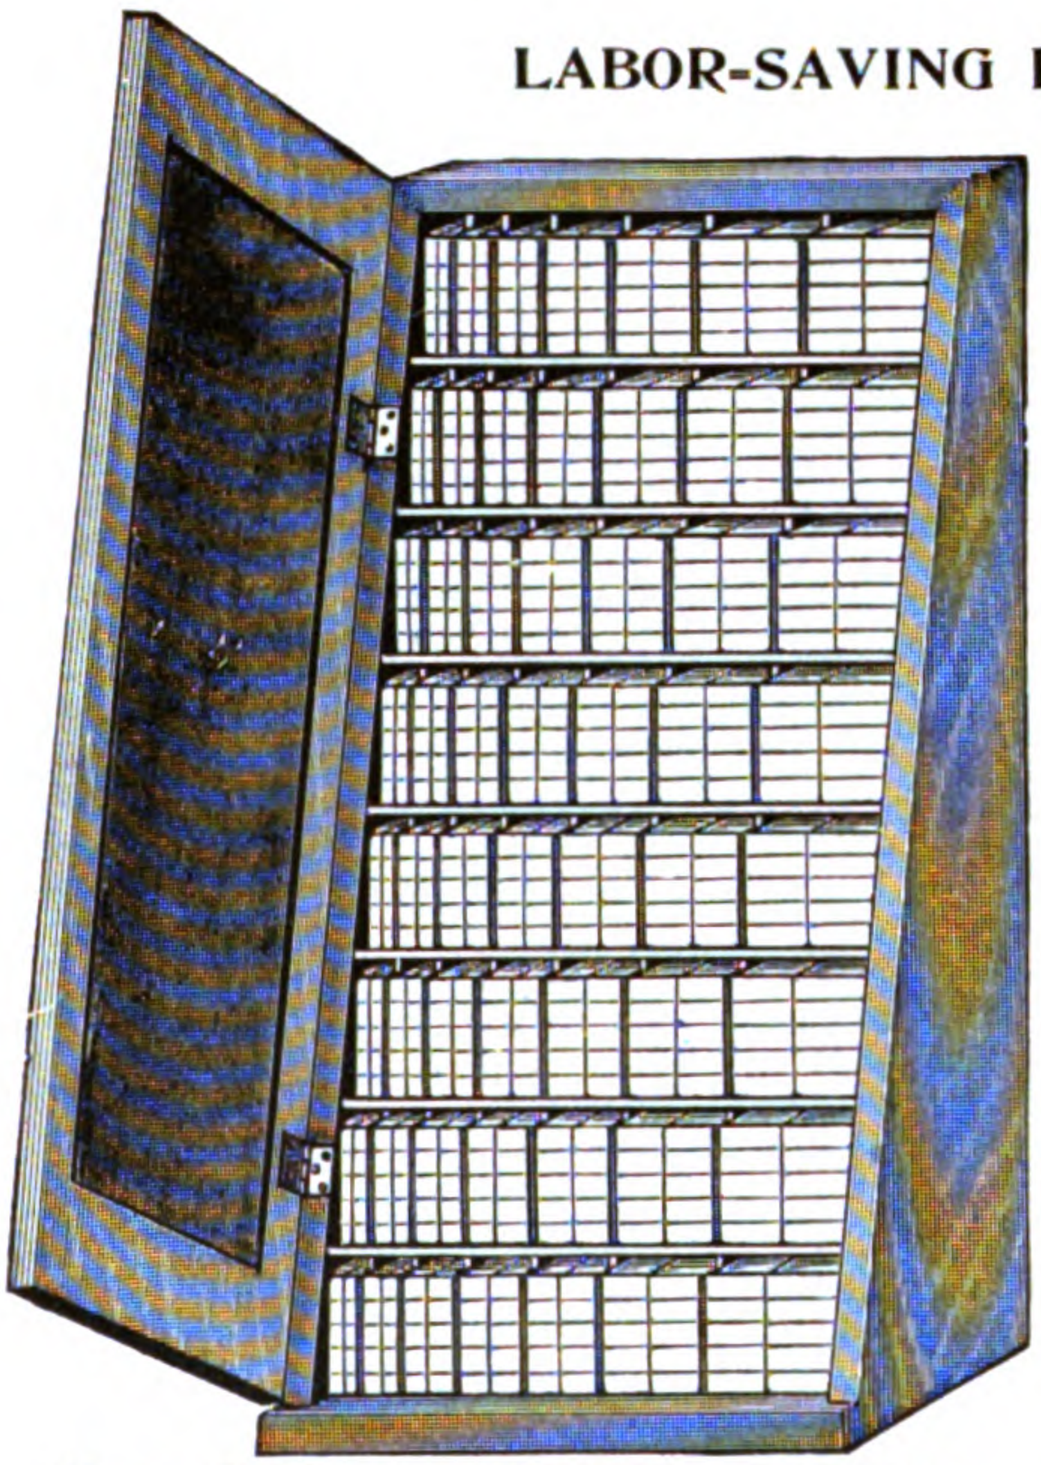
# LABOR-SAVING FURNITURE.



No. 3. Single Case, with Partitions and Door.

This Labor-Saving Furniture is thoroughly oiled, and cut to the Point standard. Every piece has the size stamped on the end.

Cases are made *with* or *without* partitions. The usefulness of the font is doubled by having it in a case with partitions.

A single case contains 560 pieces, divided into 10 pieces, each 10, 15, 20, 25, 30, 40, 50 and 60 ems long by 2, 3, 4, 5, 6, 8 and 10 ems wide.

A Half Case contains half the number of pieces held in a Single Case.

## THE No. 7 MAMMOTH CASE

Is especially designed for large offices, and contains the following assortment of selected furniture, from 10 to 160 ems long: 270 pieces each 2-line, 3-line and 4-line furniture; 225 pieces each 5-line and 6-line furniture; 135 pieces each 8-line and 10-line furniture—assorted in 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 120, 140 and 160 ems lengths. There is a larger proportion of the narrower and most-used sizes than of the wide furniture.

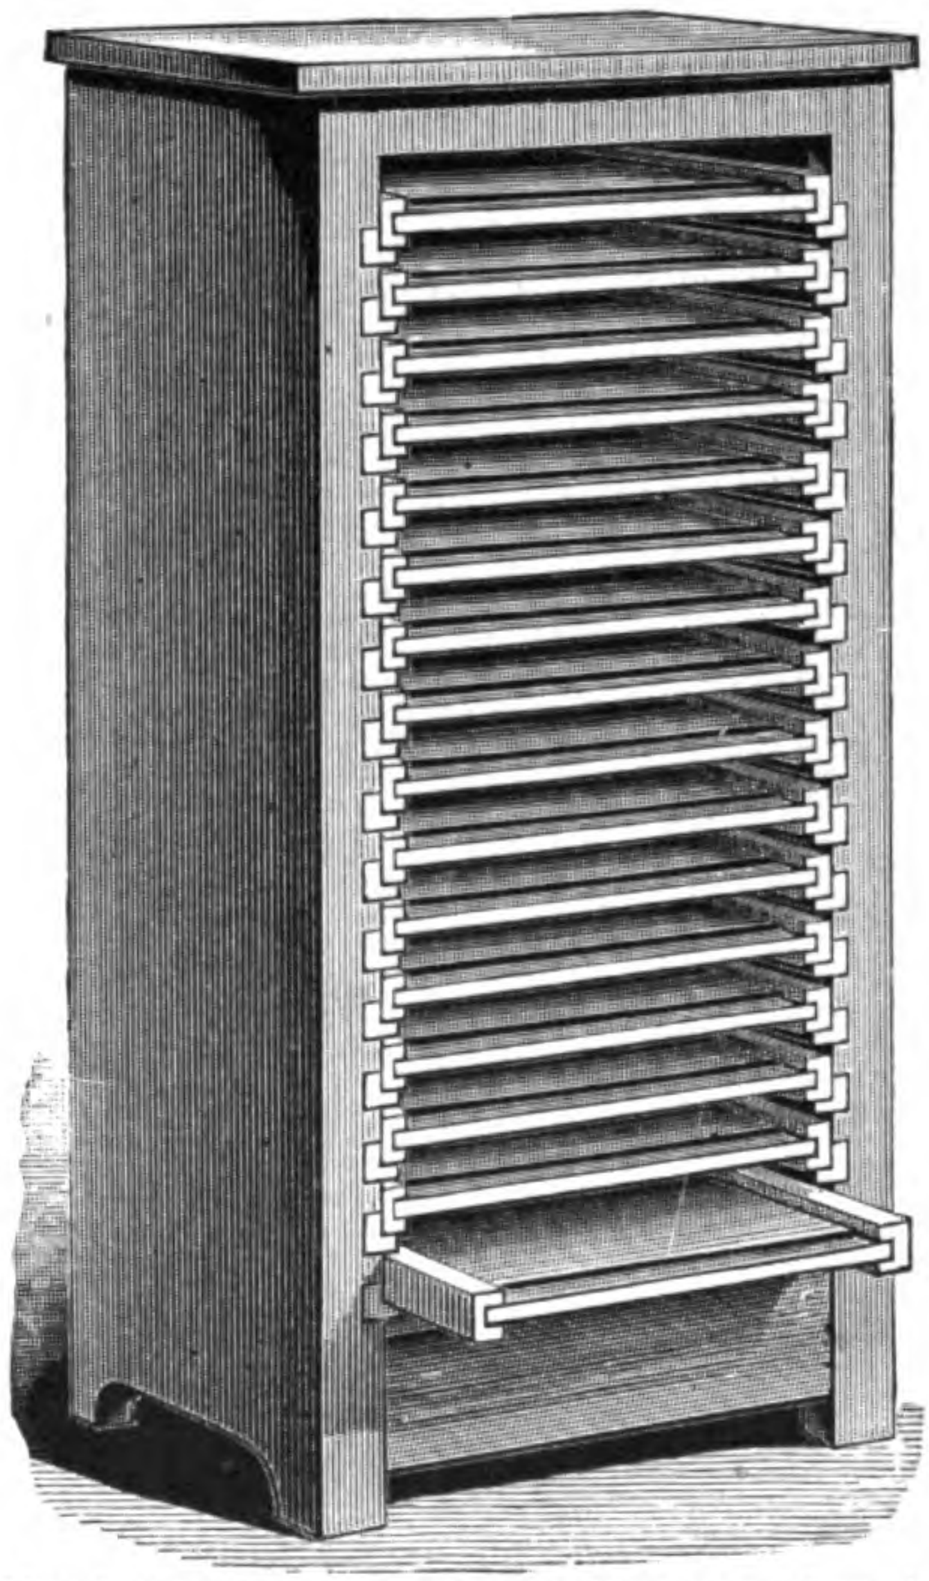
## HANDY LETTER BOARD CABINETS.

These very useful cabinets have recently been improved by putting extensions at the back of each board, so that the board may be pulled out to the limit of its inside measurement, and still be held securely between the runs.



Handy Letter Board Cabinet with Sixteen Boards.

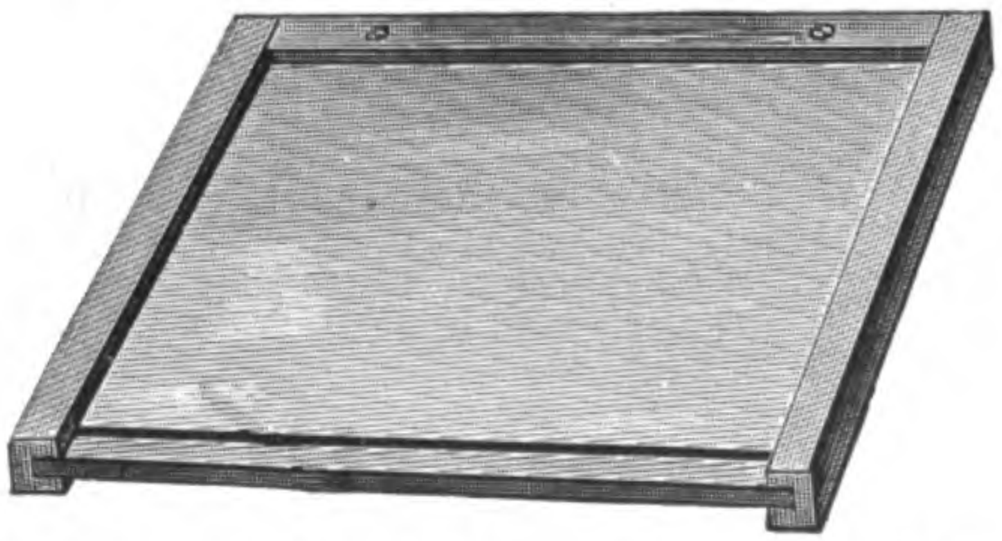
For the storage and safe keeping of job work these cabinets are unrivaled. Their cost will be saved in a few months by the prevention of pi. They occupy a floor space of 16×19 inches, with letter boards of 12×15 inches inside, and are made of hard wood throughout, in a solid and substantial manner. Boards are closed at sides and back, and are rabbeted in front to receive galleys. They are well-named "Handy." For job work within their size—and this the larger variety of such work—these small boards are much superior to the larger boards usually put under imposing tables, as it is a back-breaking job to get a form from these large boards when they are full of type.

It is distinctly an economy to place dead and live forms in such a receptacle as this, rather than to incumber useful space on an imposing stone, the type on which is always liable to damage. The protection they afford from dust is also worthy of consideration.

With 10 boards . . . . . $10 50
With 12 boards . . . . . 12 00
With 16 boards . . . . . 15 00

Other sizes made to order at proportionate prices.

## HARD-WOOD LETTER BOARDS, TO FIT CASE STANDS.



Made of selected stock, smooth and true, with closed sides and backs, rabbeted in front to allow matter to slide on galleys easily. These boards have projecting backs (not shown in cut), so that they can be pulled out of the racks to the full extent of their inside measurements.

No. 1 fits two-third case stands; No. 2, three-quarter stands, and No. 3, full-size stands or racks.

No. 1, 21¾×20½ inches outside . . . . . $1 20
No. 2, 26¼×20½ inches outside . . . . . 1 40
No. 3, 32¼×20½ inches outside . . . . . 1 70

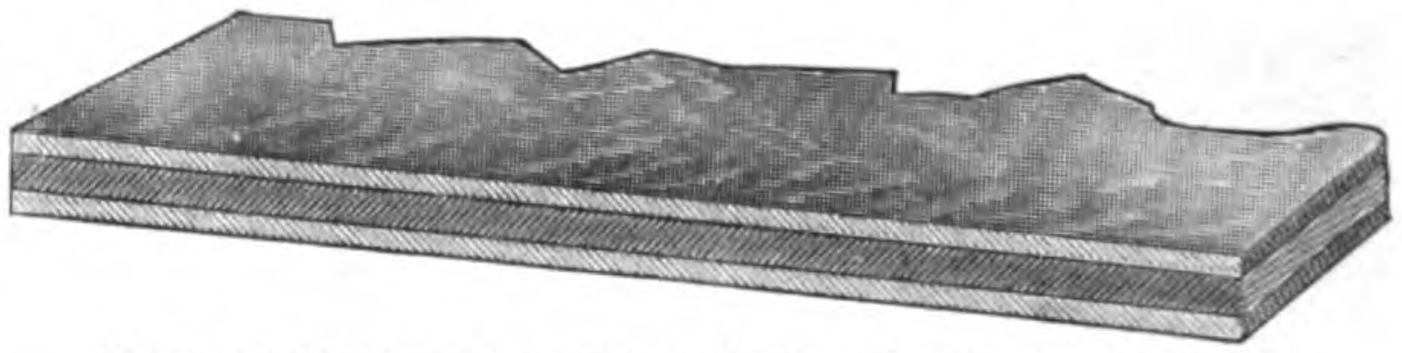
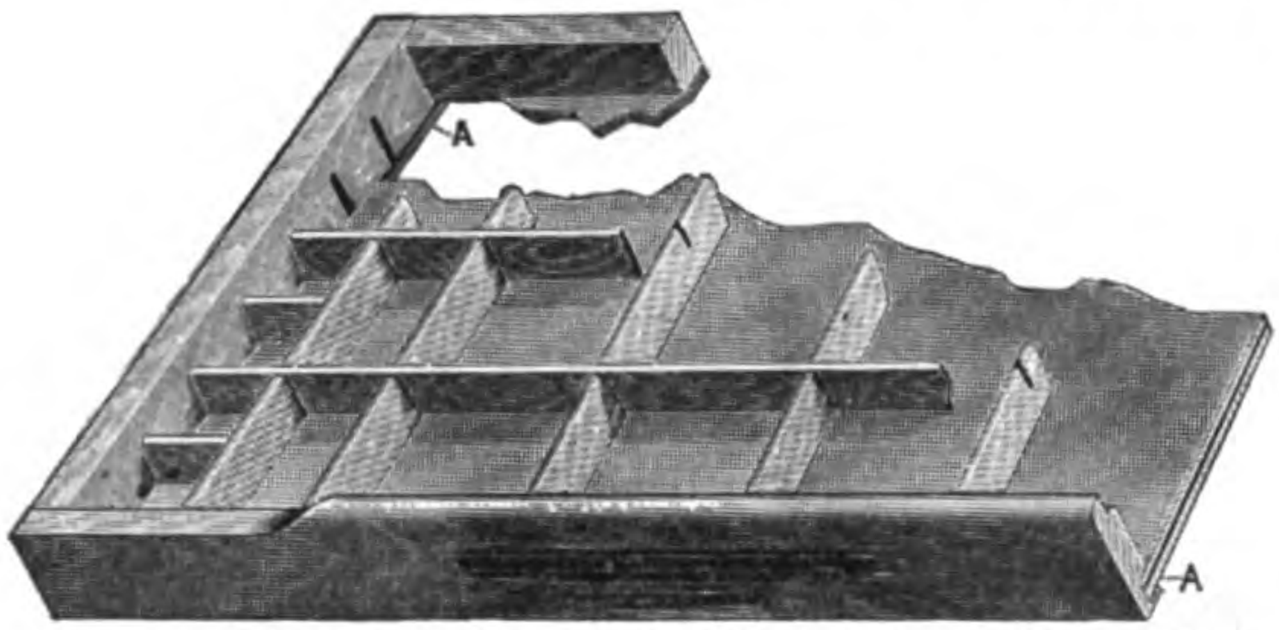
## PATENT NEW DEPARTURE TYPE CASES.



Shows three-ply case bottom, which will not warp nor crack.



Shows at AA how the three-ply bottoms are set into the front and side rails, so that the case slides on the rails instead of on the case bottoms.

Our cases all have patent "New Departure" three-ply bottoms, which prevent splitting, warping and shrinking. These bottoms are set into the side and front rails (see AA), so that the case slides on the side rails. As the grain of the side rails and of the case-runs in stands and cabinets run the same way, the cases slide much easier and with considerable less wear and tear.

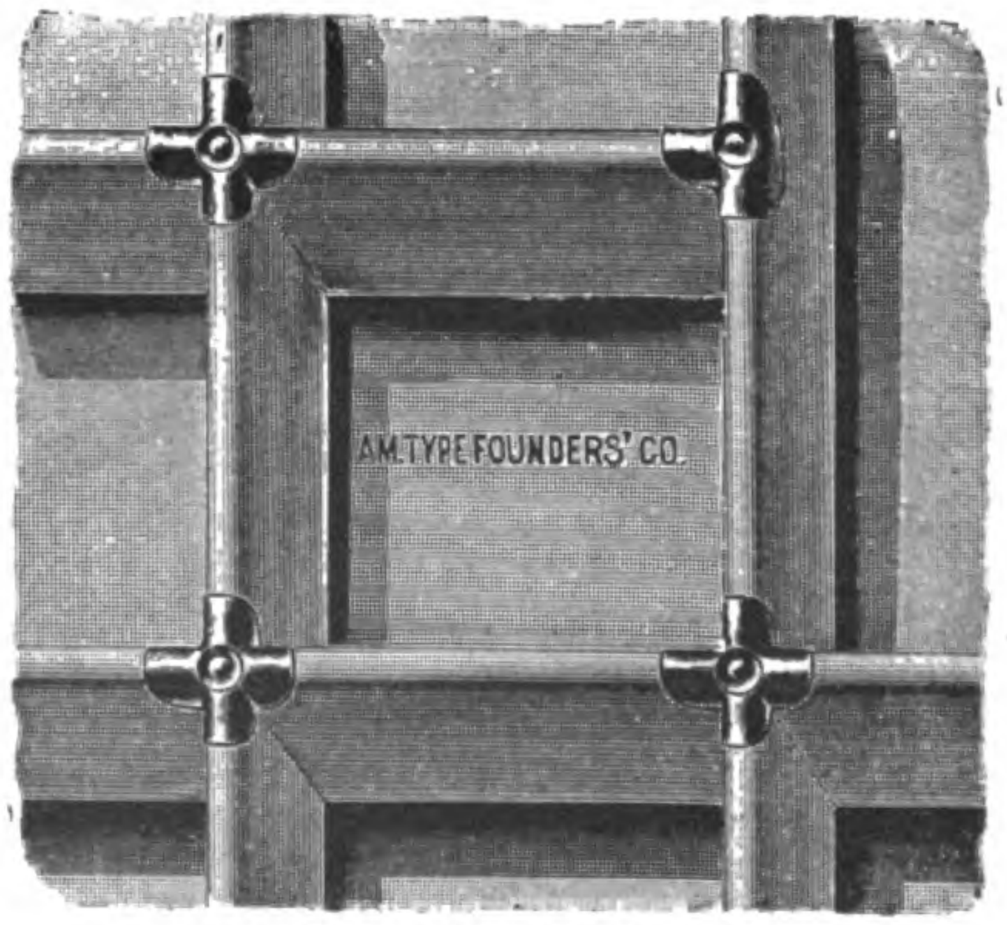
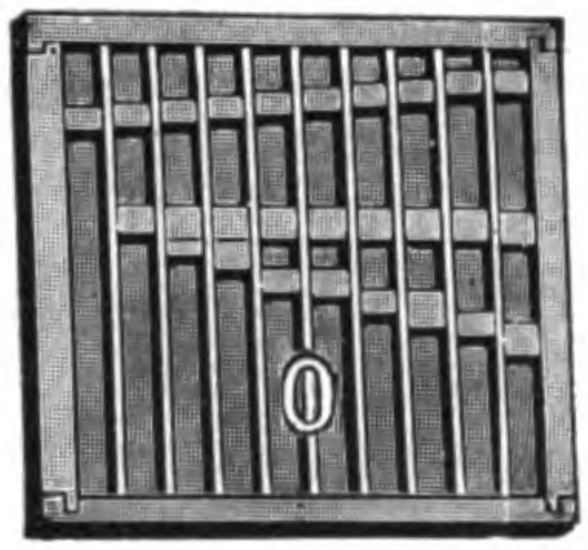
## PATENT CLASP CASES.

These cases are of unusual strength, owing to the use of a brass clasp over the corner of each box and a long pin which is driven through center of each clasp and clinched, holding the partitions firmly to the bottom of the case. This feature, in combination with our "New Departure" case bottoms, makes these cases the strongest and most durable, especially for body type and in newspaper offices.



Section of Patent Clasp Case.



## INDIVIDUAL LEAD OR RULE CASE.

In this a compositor may keep his much valued 12-to-Pica and other thicknesses of leads for justifying purposes, his pickups of dashes, rule, etc. The case can be kept in his drawer or on his galley rest. It has boxes from 1 to 9½ ems (varying by ens), from 10 to 22 ems (varying by ems), and from 22 to 28 ems (varying by two ems), with a long box for longer lengths. It is also useful for holding a small font of labor-saving brass rule.

Each, 7×7½ inches over all . . . . . **$0 75**

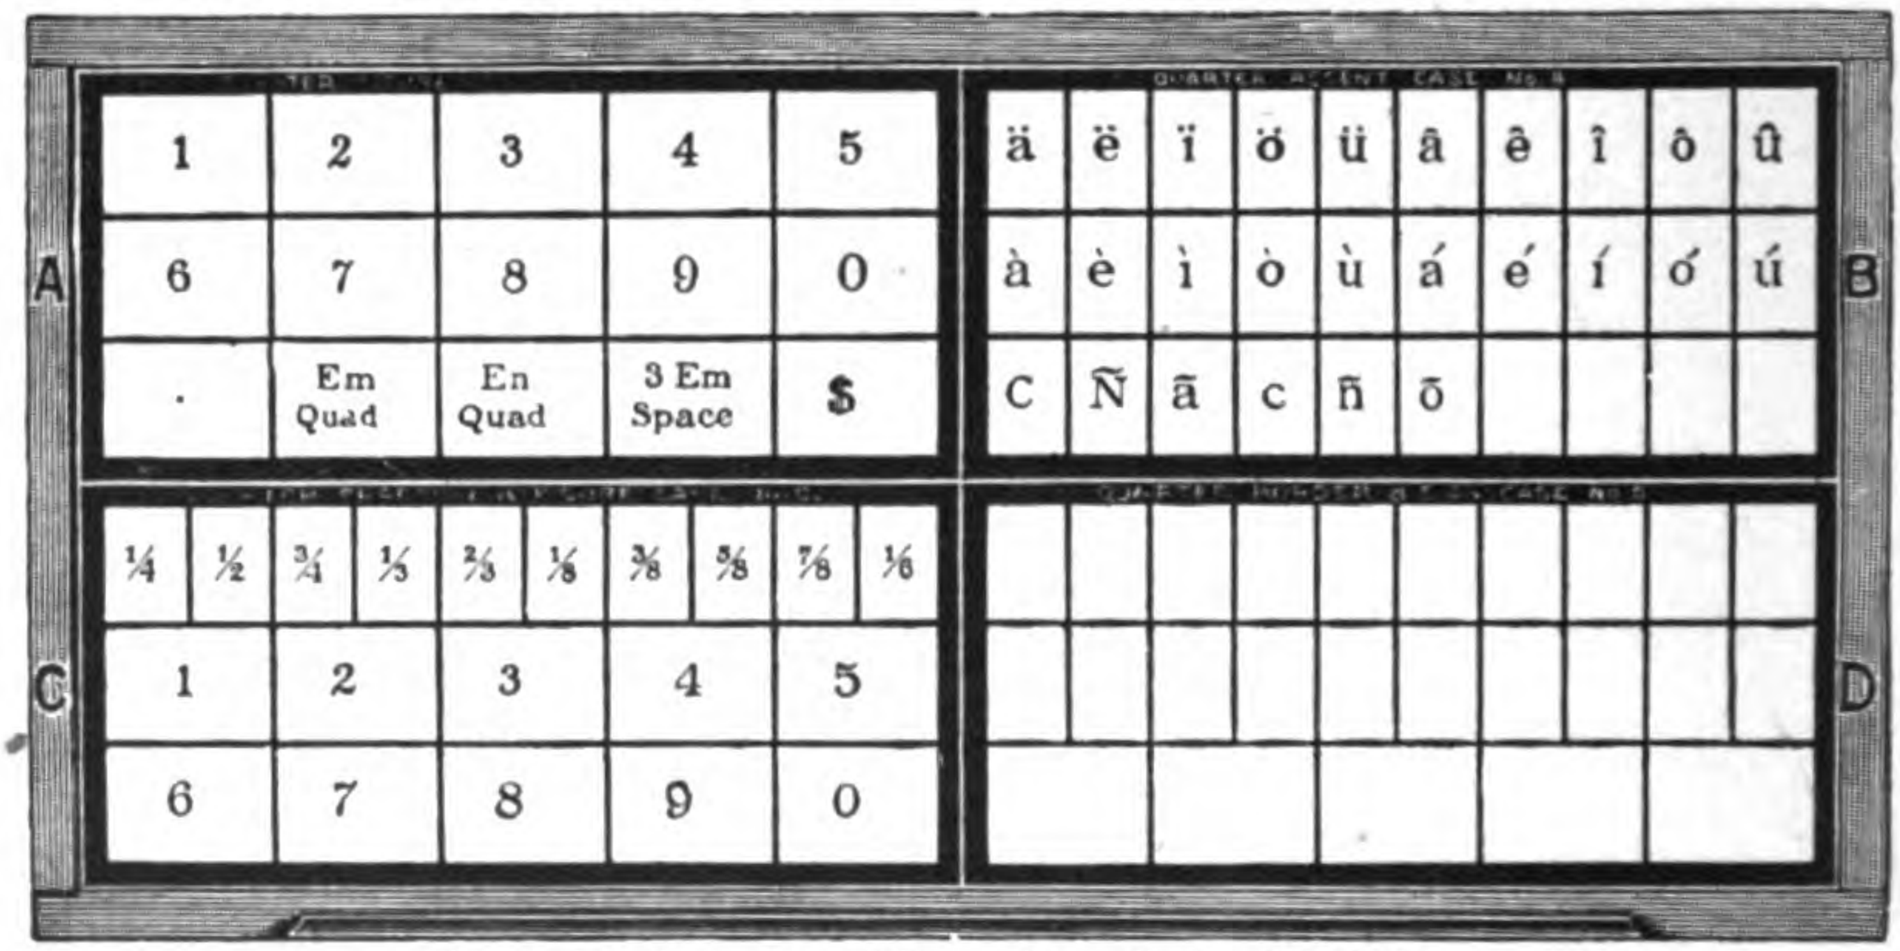
Four of them fit inside a Full-sized Blank Case.

## LEADER BOX.

The handiest receptacle for leaders. Can be put on a cap case, on a stone, or on a galley rest, bringing leaders close to hand. One or more required in every office for every size of body type used.

Each, 5×8×1¾ inches over all . . . **$0 25**
Per dozen . . . . . **2 50**

## WISCONSIN COMBINATION "QUARTER" CASES.



Shows four "Quarter" Cases in Full-size Blank Case.

Signs, Borders, Accents, Split Fractions, although most expensive, are usually stowed away in odd boxes of cap cases, and are rarely to be found when needed. "Quarter" Cases supply a means of keeping these valuable sorts where they can be found. They can be placed on a cap case, on a stand, or on the stone, convenient to hand of compositor. In setting mathematical work, foreign languages, dictionaries, and special catalogues, these "Quarter" Cases will prove invaluable. We show a few schemes for laying signs, fractions, etc., but various other uses for special purposes will suggest themselves to the "intelligent compositor."

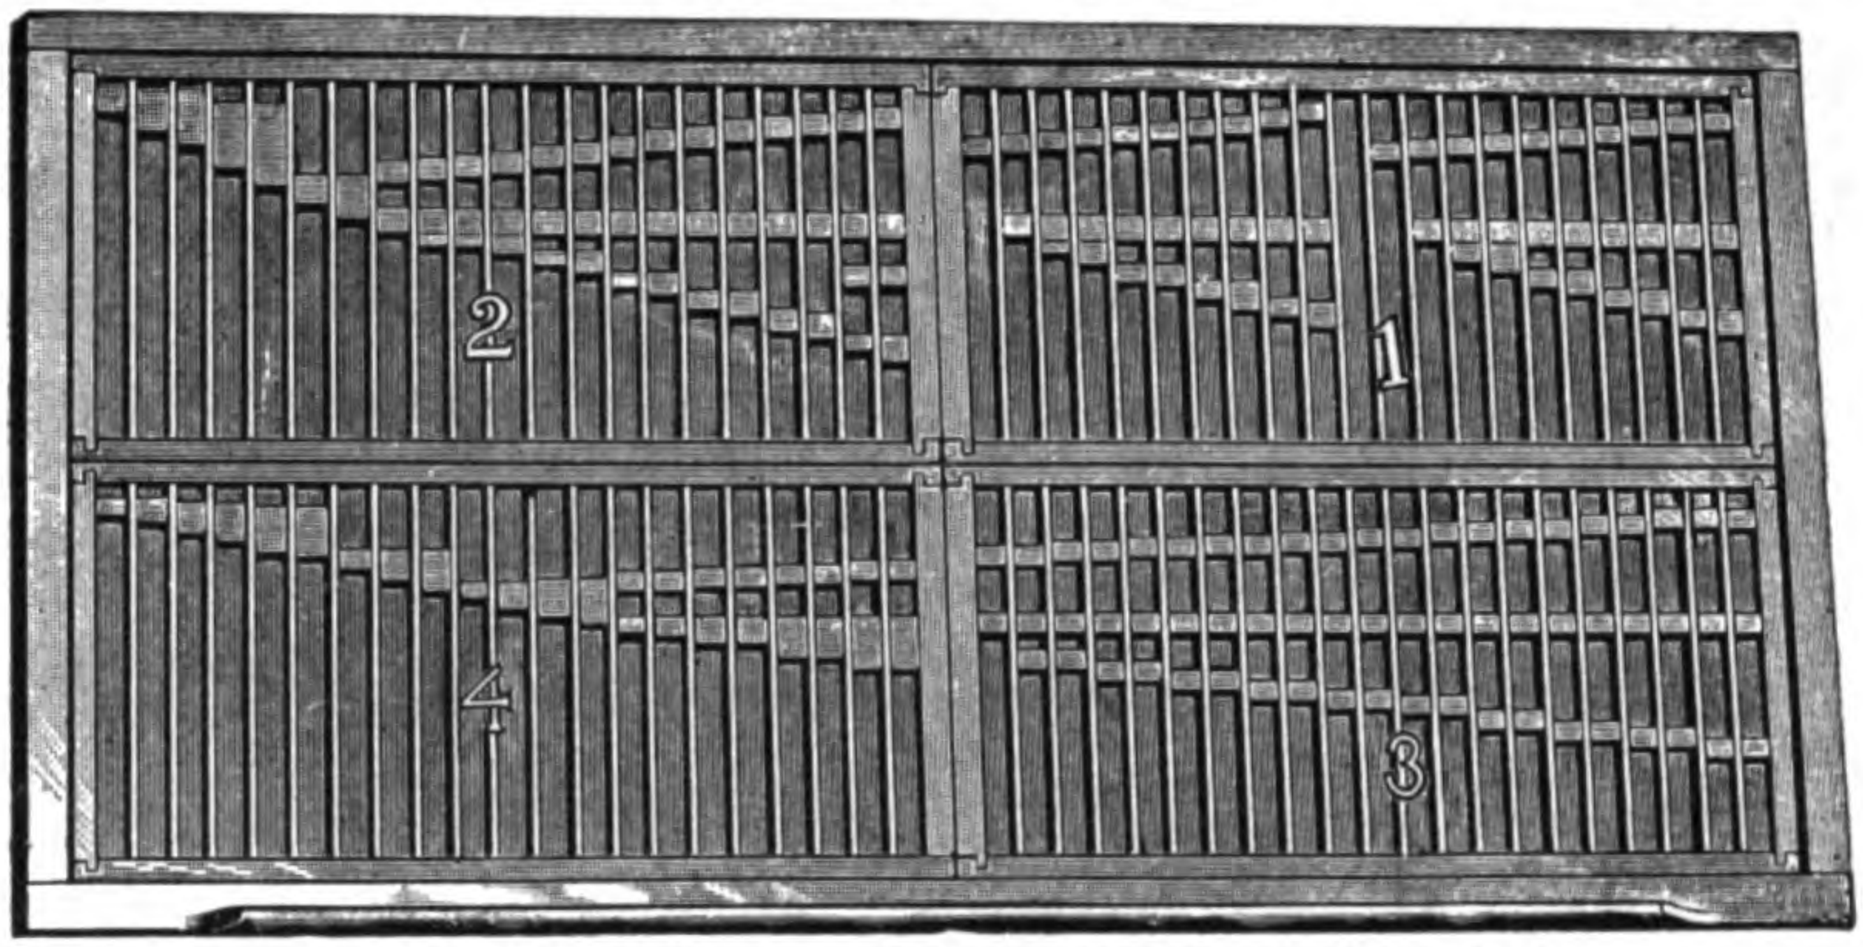
Per set of four, in regular Full-size Blank Case . . . . . **3 25**

## HARRIS RULE CASES.



Four Harris Rule Cases in a Full-size Blank Case. Price, **$4 90.**

In HARRIS RULE CASES the rule cannot fall flat—must always stay on end. Pi is prevented, because each box is accurately adjusted for its special size—for instance, a 21-em rule will not go into the 20-em rule box. Generous provision is made for the smaller sizes—the most valuable sizes in a labor-saving font. The cases may be used in sets or separately, as Nos. 1 and 2 are complete in themselves. Four of them fit into a full-size blank case.

The rule referred to below is 2-point, which is the most used.

No. 1 Harris Rule Case holds two complete small fonts of Labor Saving Rule, each weighing 8 pounds, or 16 pounds in all. Each half of this case holds eighteen pieces each length from 1 to 8½ ems (varying by ens), and eighteen pieces each from 9 to 18 ems (varying by ems) and nine pieces each 19, 20, 21, 22, 24, 26 and 28 ems, besides boxes for right and left miters.

No. 2 Harris Rule Case holds one complete font of 16 pounds weight or less. It has compartments for thirty-six pieces each from 1 to 9 ems long (varying by ens), eighteen pieces each from 10 to 24 ems long (varying by ems), and eighteen pieces each of 26, 28, 30, 32, 34, 36 ems long, besides boxes for right and left miters. A large proportion of small lengths allowed for.

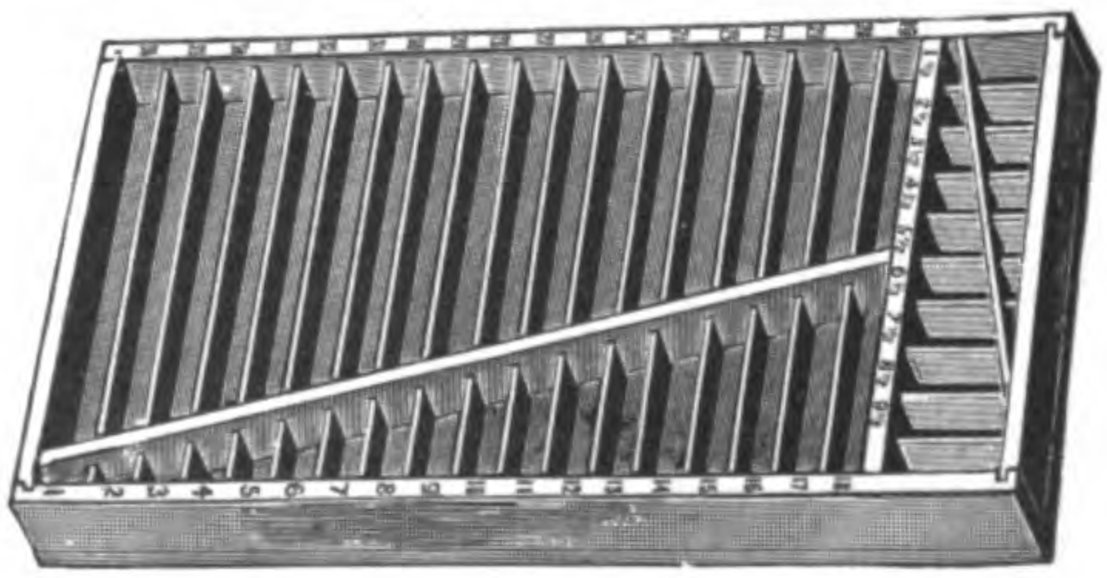
Nos. 3 and 4 Harris Rule Cases are designed to be used together to hold a font of rule suitable for a large office, weighing 32 pounds or less. Two and in some cases four boxes are used to hold the most-used sizes. Each case has its proportion of the small sizes, so that if it is desired to carry one case to a compositor's stand for use in rule work, the other is available in its regular place with a good working font. These cases have compartments for seventy-two pieces each from 1 to 9 ems long (varying by ens), thirty-six pieces each from 10 to 24 ems long (varying by ems), and eighteen pieces each from 25 to 36 ems long (varying by ems), and boxes for right and left miters.

| | |
|---|---|
| Harris Rule Case No. 1, holds two 8-pound fonts | **$1 25** |
| Harris Rule Case No. 2, holds one 16-pound font | **1 00** |
| Harris Rule Case No. 3, used together, hold one 32-pound font | **1 00** |
| Harris Rule Case No. 4, used together, hold one 32-pound font | **1 00** |
| Full-size Blank Case, to hold four of above | **0 65** |

## COMPACT RULE CASE.

Has compartments for brass rule from 1 to 36 ems Pica, and from 1½ to 9½ ems Pica, with places for miters. Size outside, 7⅜ × 15¼ inches. Four fit in a full-size blank case. For Full-size Rule Cases see page 845.

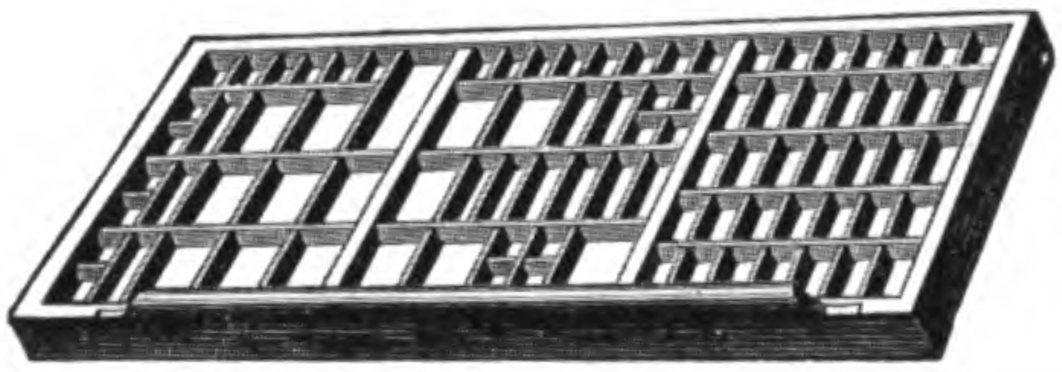
Price . . . . . **$0 90**



# ILLUSTRATIONS OF CASES.

It is unnecessary to illustrate the most-used styles of cases. Nearly all the cases illustrated here have exceptional merit.

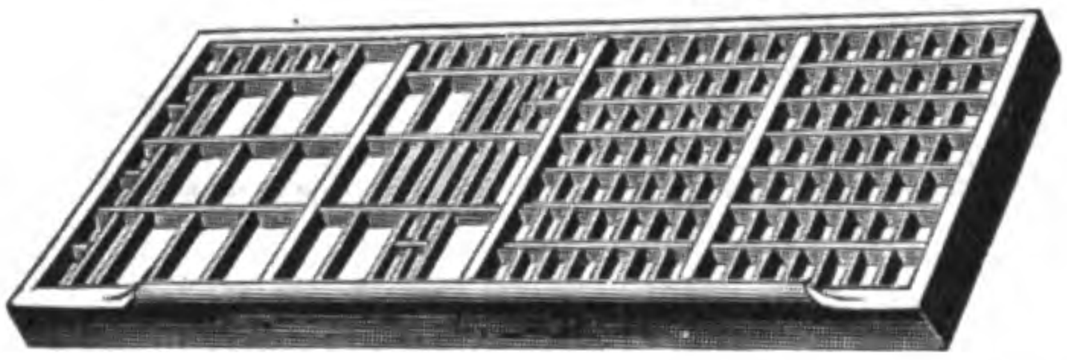
## CALIFORNIA JOB CASE.



Has fourteen boxes less on cap side than the regular Italic Job Case, thus giving more space for the cap alphabet. A more satisfactory case for the ordinary job font than the Italic Job Case, especially in three-quarter size.

Full-size . . . . . $0 90
Three-quarter . . . . . 0 80

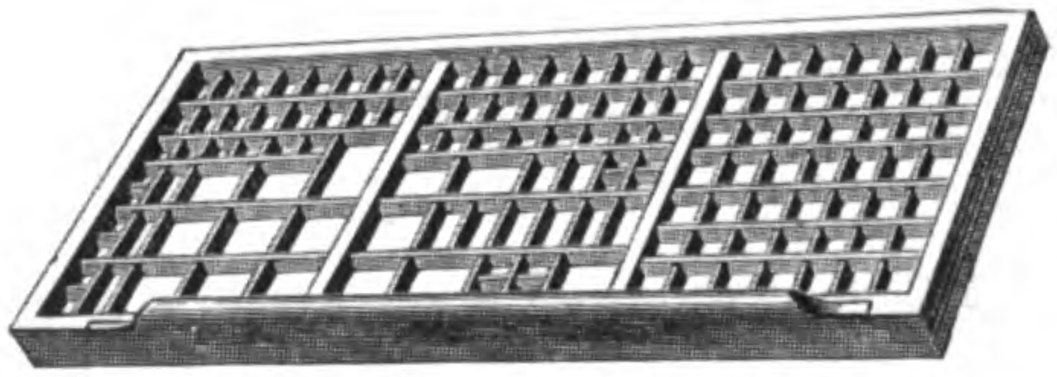
## IMPROVED JOB CASE.



Holds caps, small caps, lower case and figures, or a cap and lower-case font (with figures) and an extra cap font. Will also hold three cap fonts, all with figures. Made full-size only.

Price . . . . . $1 20

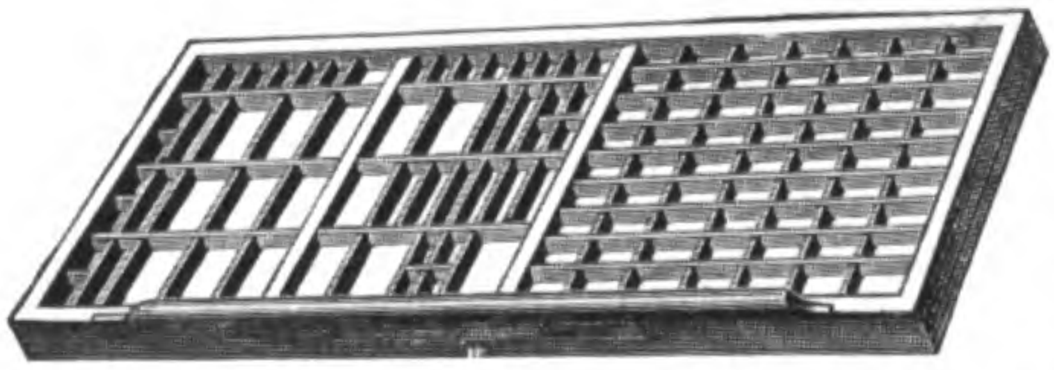
## NEW YORK JOB CASE.



Holds caps, small caps, lower case and figures. The small caps are placed on the same side as the lower-case boxes, and above them. The lower-case boxes are therefore smaller than in a California Job Case. Made full-size only.

Price . . . . . $1 00

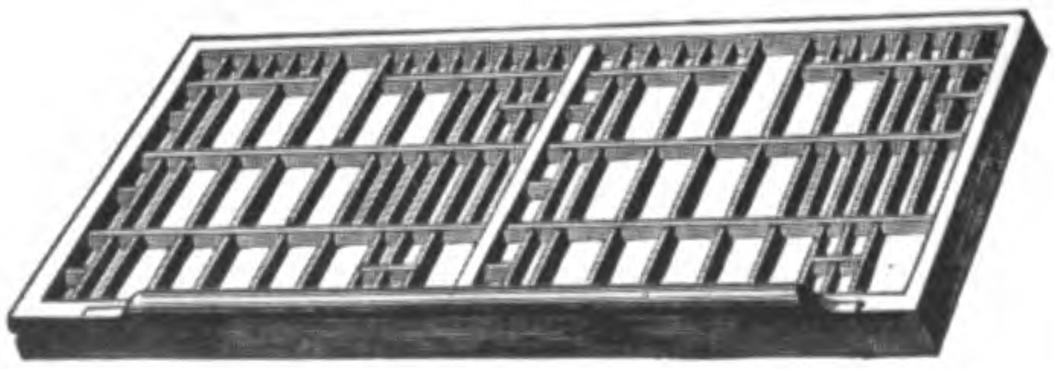
## PATERSON JOB CASE.



Holds caps, small caps, lower case and figures. The small caps are placed above the cap boxes, all of which are widened, thereby reducing the sizes of the lower-case boxes. A very useful case. Made full-size only.

Price . . . . . $1 00

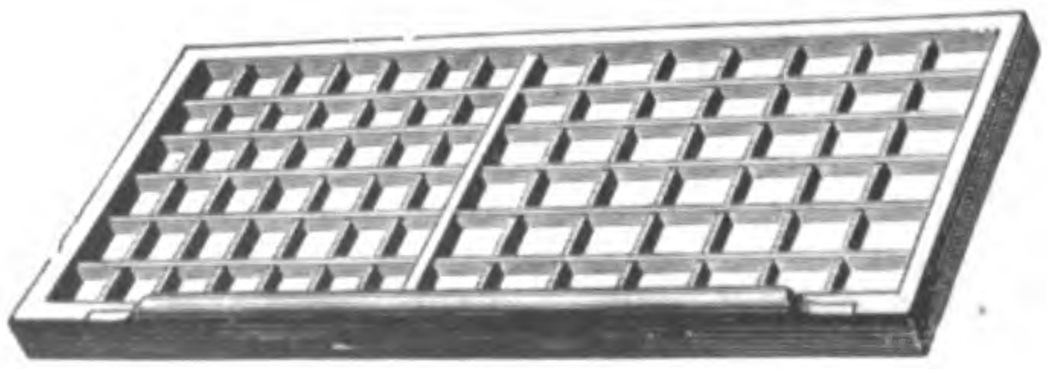
## DOUBLE LOWER CASE.



A most useful case. In most job fonts the caps occupy as much space as the lower case, while ordinary job cases give the caps one-half the room allotted the lower-case. In this case the space is divided equally between the caps and lower case. Made full-size only.

Price . . . . . $1 20

## ROOKER CAP CASE.



Made only in Rooker size (28¼ x 14¼). Gives more space for caps and less for small caps than the regular cap case. Rooker cases are two inches narrower than ordinary cases, and cannot be used on the same stands.

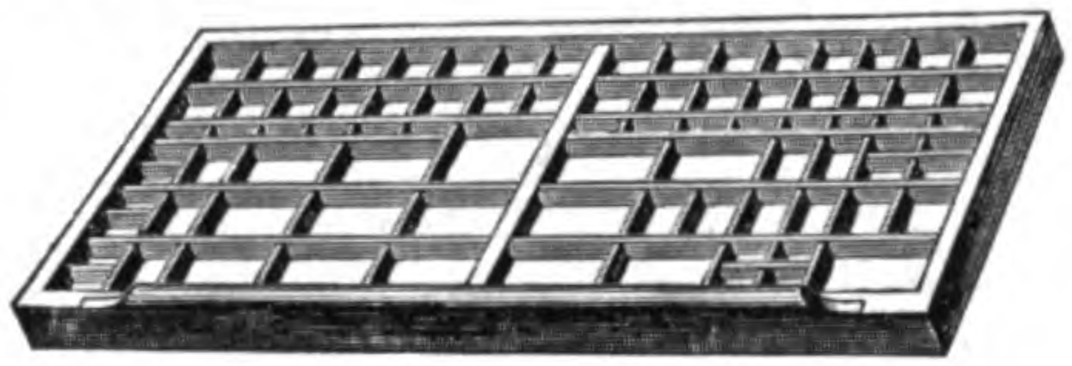
Price . . . . . $0 88

# ILLUSTRATIONS OF CASES.

## YANKEE JOB CASE.

In two-third size, a case with cap boxes at the back is a necessity, but in full-size and three-quarter size this case is inferior in utility to other job cases.

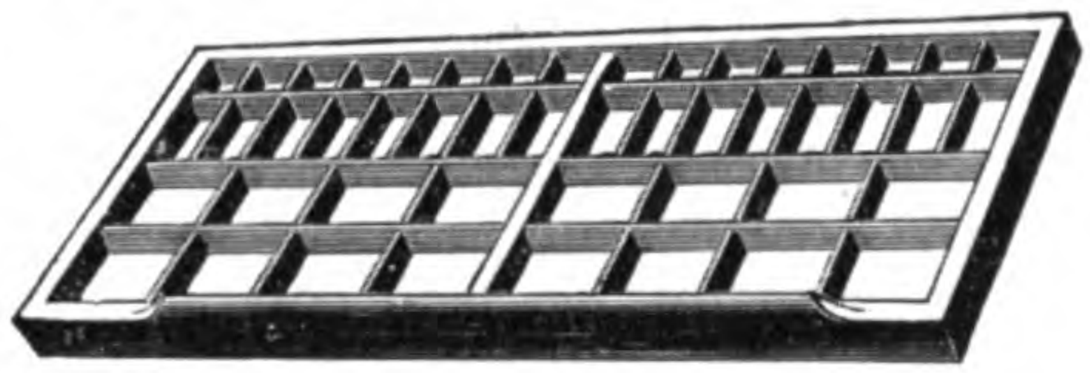
Full-size (32 cap boxes) . . . . . $1 00
Three-quarter (32 cap boxes) . . 0 85
Two-third (28 cap boxes) . . . . 0 75



## SPACE AND QUAD CASE.

This is an absolutely essential case in offices where economy of time and material is a consideration. Each case holds eight sizes of spaces and quads. Made full-size only.

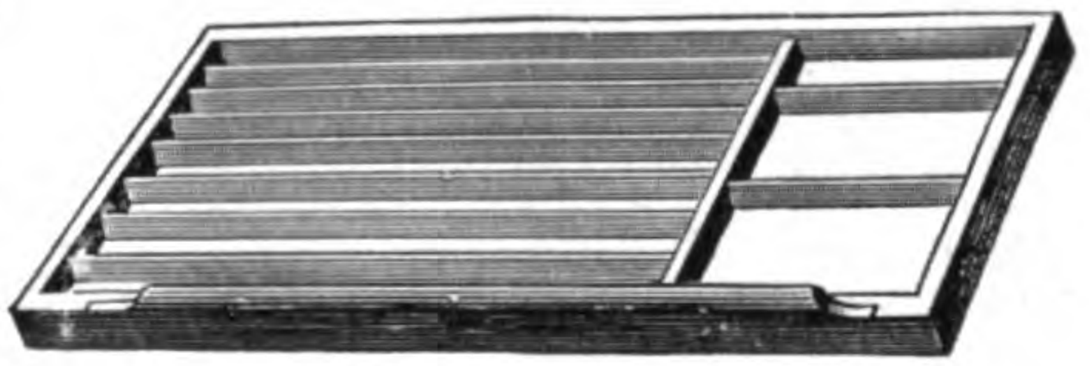
Price . . . . . $1 00



## METAL FURNITURE CASE.

A handy receptacle for metal furniture. There are compartments for 1, 2, 3, 4, 5, 6, 8, 10, 15, 20, 25 and 50 ems. The double-depth case takes three layers of furniture; the single-depth case takes two layers. The latter can be put in a full-size case stand or rack, and the double-depth case is for use on top of a stand or cabinet, or a special place can be made for it under the stone. Made full-size only.

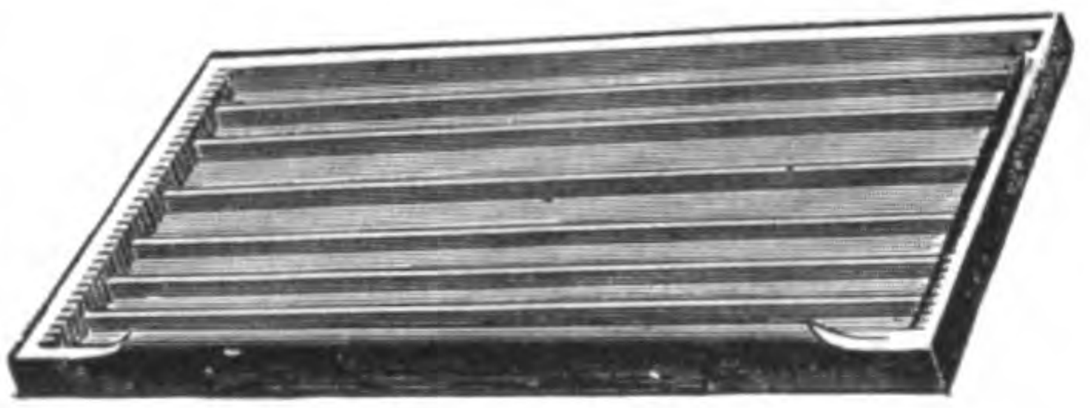
Double-depth . . . . . $2 00
Single-depth . . . . . 1 50



## SCRIPT OR WOOD-TYPE CASE.

Although mostly sold for wood type, these cases are made so accurately as to be suitable for large Script fonts. The movable partitions are adjustable by Picas. Nothing injures expensive Script type so much as tumbling about in a case. The use of Script cases will save type. Made in full- and two-third sizes.

Full-size . . . . . $0 90
Two-third size . . . . . 0 75



## MAMMOTH WOOD-TYPE CASE.

No. 3 (Mammoth) Wood-Type Case, 23 × 44 inches, with slotted sides. For special rack to hold this size case, see page 851. There are two more sizes of Wood-Type Cases made. For prices see page 845.

Price of No. 3 Wood-Type Case . . . $1 30

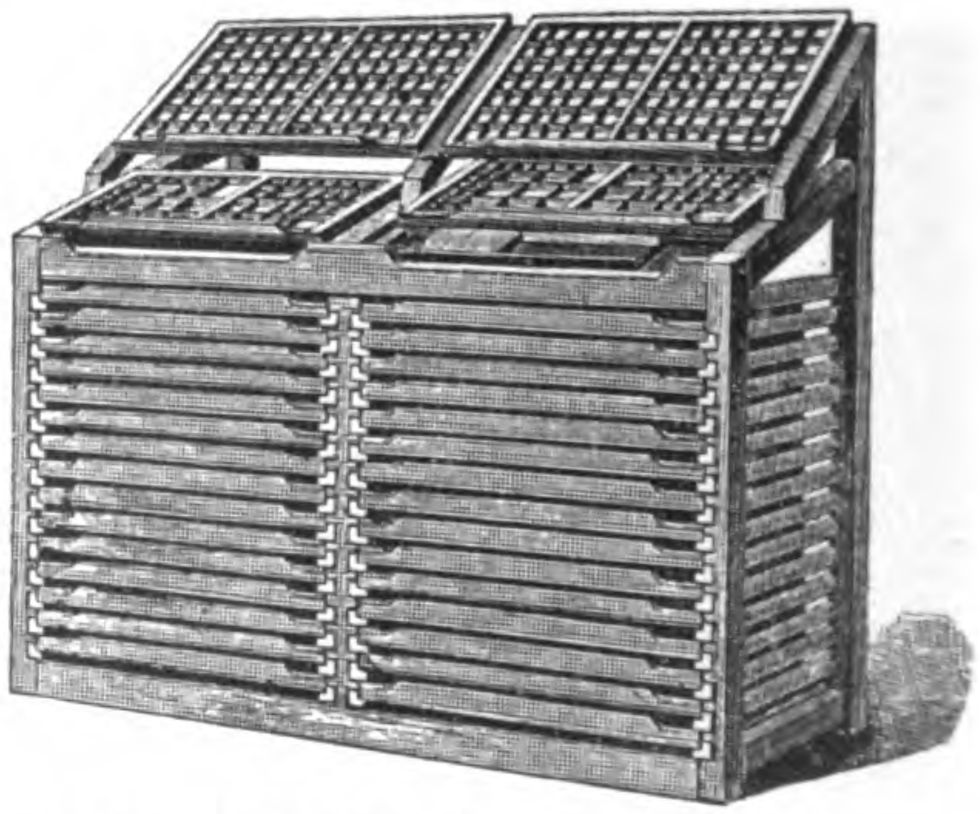
No. 15. Double Stand, with Galley Rest, and Racks for Twenty-four Full-size Cases.

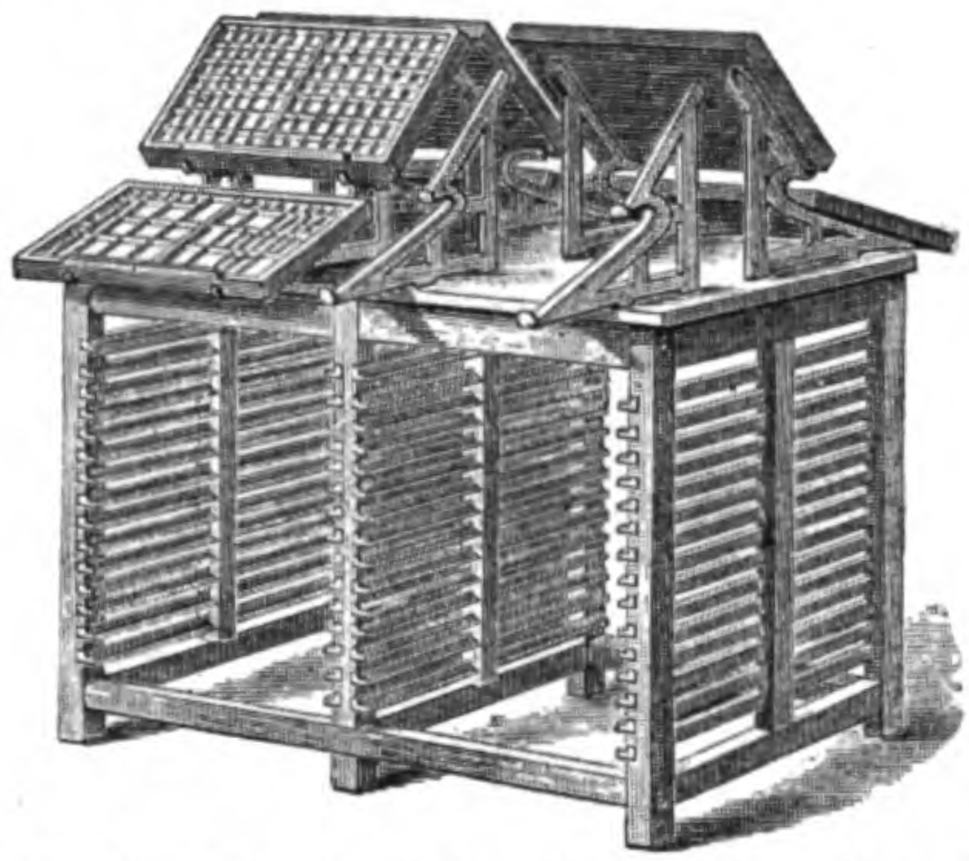
These stands are made of hard wood, with bolted frames.



No. 17. Double City Stand. The upper cases project over the lower, bringing the caps nearer the hand. There is a shelf to hold a galley under the lower case, which can be pushed back to permit matter to be emptied on the galley.

# NEW YORK SPACE-SAVING CASE STANDS.

New York Double Stand.



New York Quadruple Stand (see end view below).

These are *space-saving, rent-reducing stands.* Two New York Double Stands, holding sixty cases in racks and four pairs cases on top, occupy eighteen square feet of floor space, as against thirty square feet occupied by two ordinary double stands, holding at most forty-eight cases in racks and four pairs cases on top—a saving of twelve square feet. Two Double City Stands occupy a floor space of twenty-five square feet as against seventeen feet occupied by one Quadruple New York Stand—a saving of eight square feet. This saving is obtained by making the racks correspond to size of cases exactly, bringing forward the cap cases so that they do not overhang at the back of stand (as they do on ordinary stands), and extending the lower cases several inches into the alley.

End view of New York Window and Quadruple Stands.

## OTHER POINTS OF SUPERIORITY.

The lower cases project into the alley several inches, affording the compositor ample leg room, and allowing him to get closer to the type. The angle of the lower case is just right for rapid setting. The upper case is raised above the lower, and brought forward closer to the compositor's hand, while not obstructing the figure boxes of the lower case. The cases are held on strong iron brackets, securely screwed to a hard-wood top, which is perfectly smooth, and very useful for storing tied-up matter or for other purposes.

The Window Stand is a rearrangement of the Double Stand, so that it occupies a square area, and is very suitable for placing opposite a window.

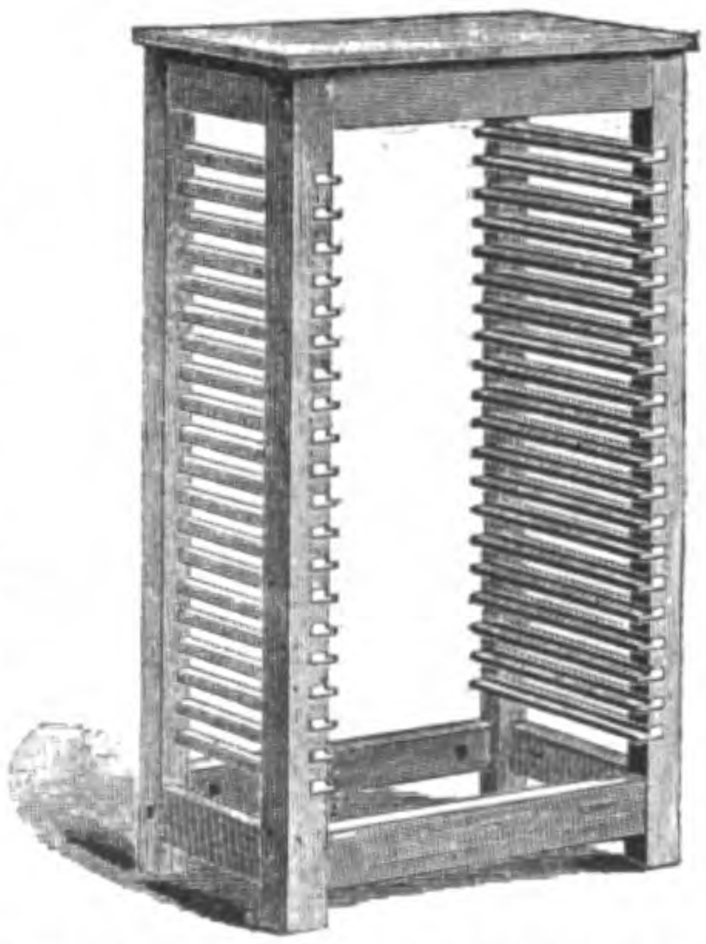
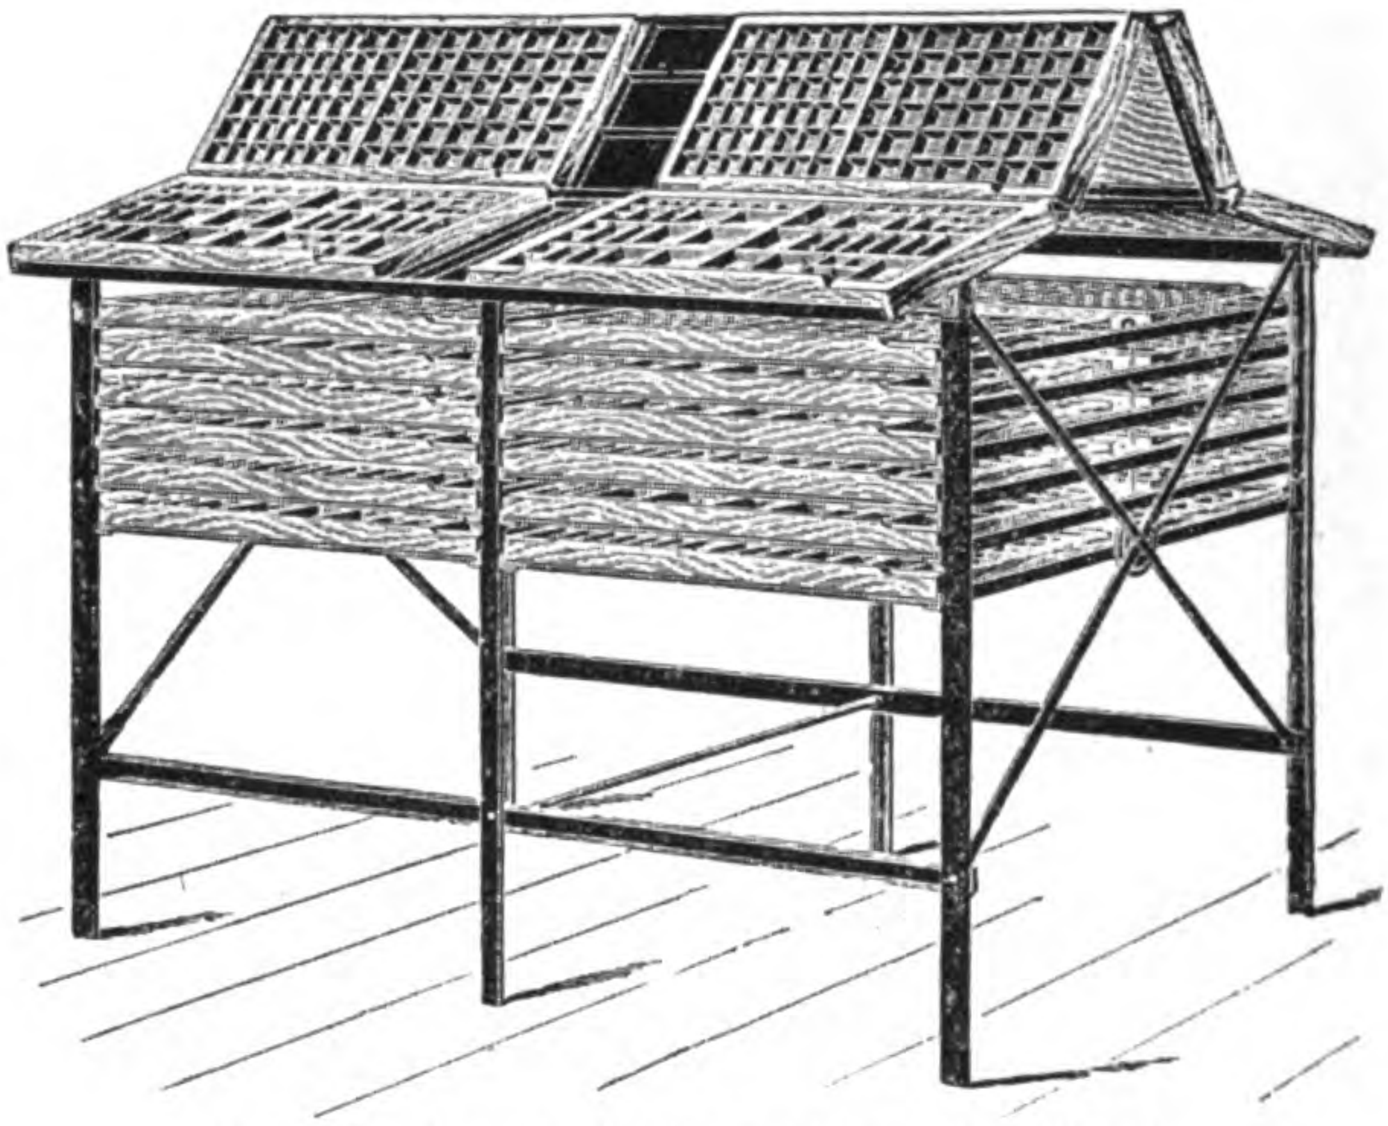
A No. 3 Wood-Type Case is 23×44 inches over all.



Case Rack for Twenty Full-size Cases.

## PERFECTION WROUGHT IRON STANDS.



Perfection Quadruple Wrought Iron Case Stand,
with Racks for Twenty-four Cases.

The Quadruple Stand has novel features. The cases on top project eight inches from the rack, giving the compositor plenty of knee room. The galleys between top cases are six inches wide, and divided into convenient spaces.

No stands are so durable and "ship-shape"-looking as those made of iron. These stands are exceptionally well made.

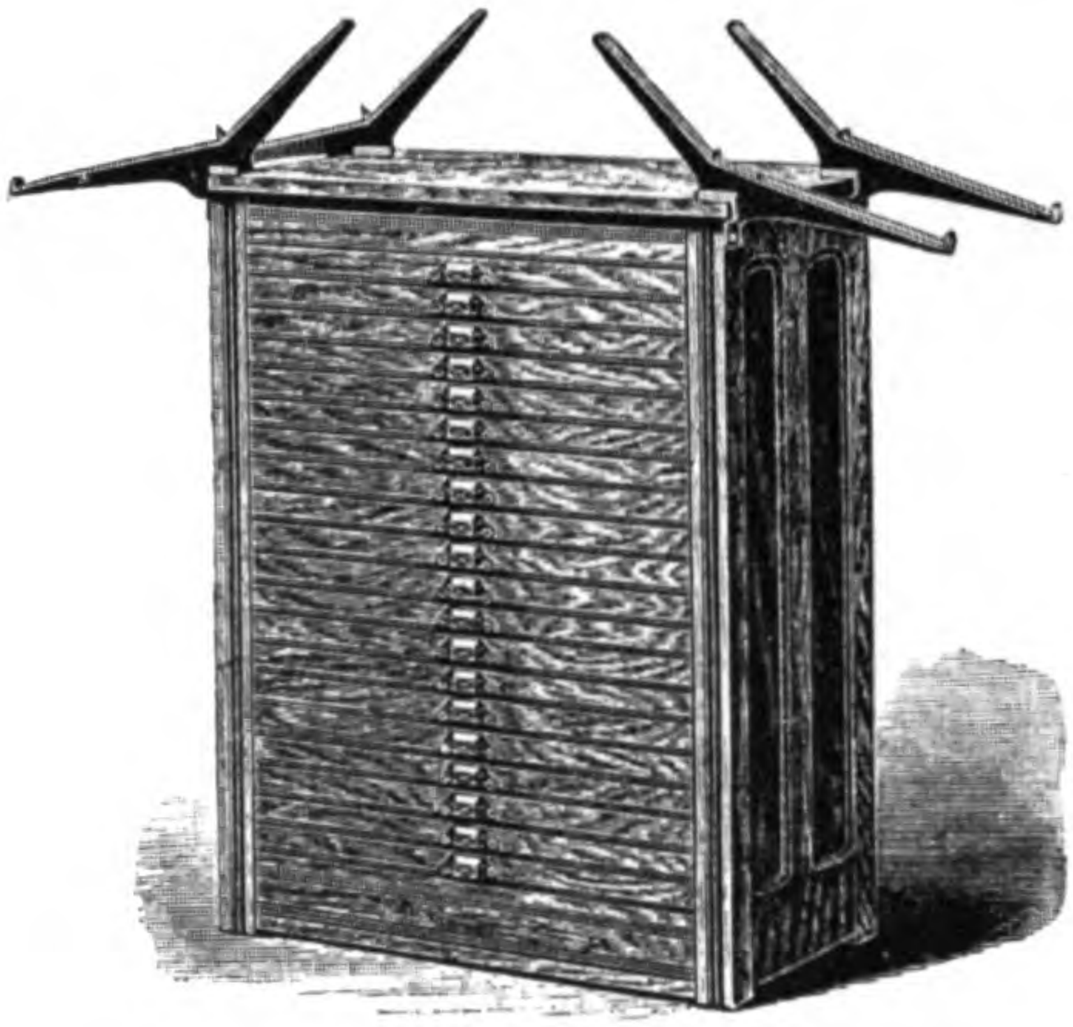
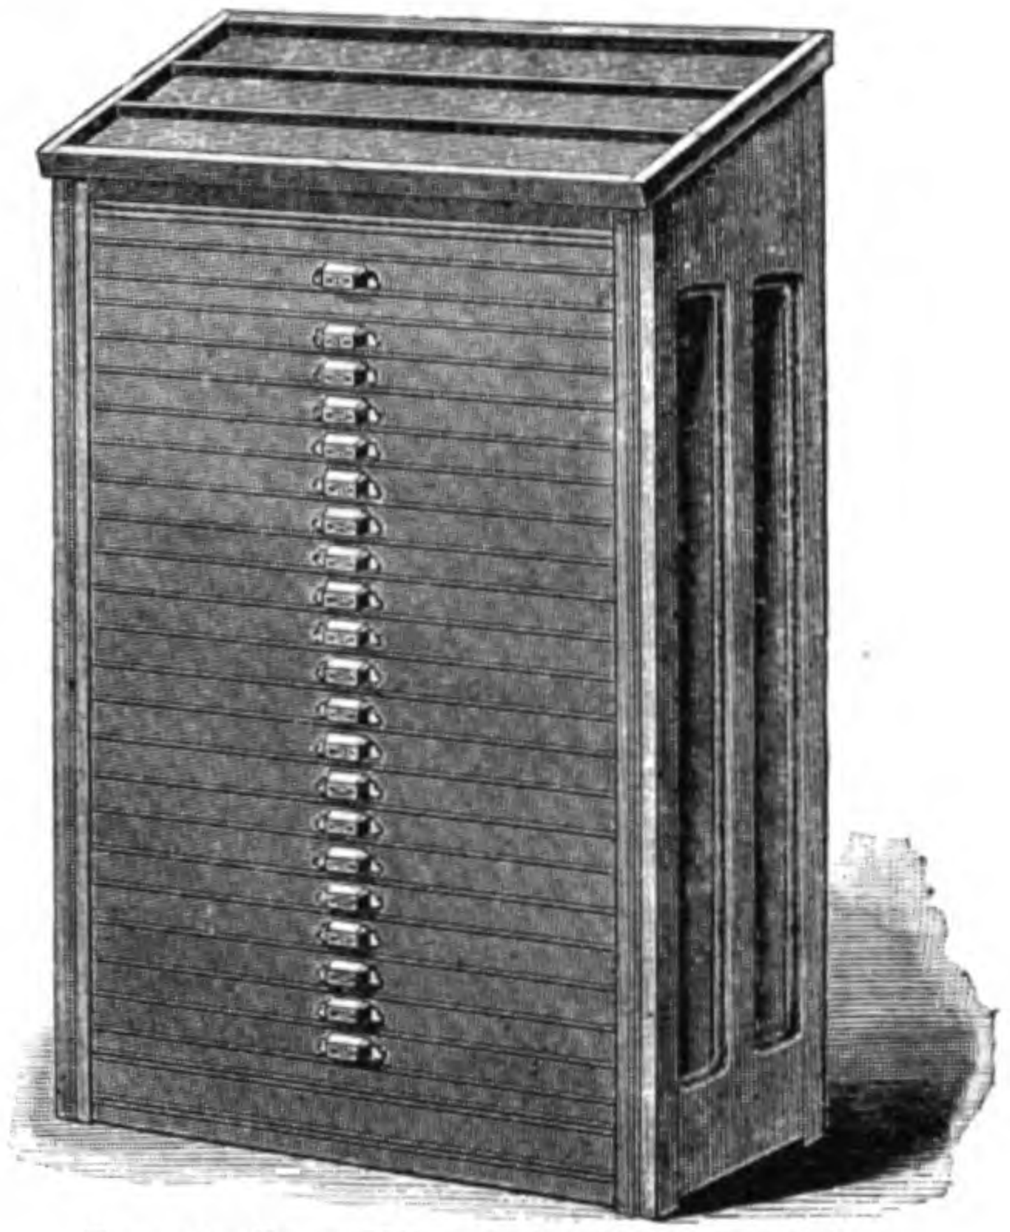
**With "New Departure" Cases.**



Twenty-Case Wisconsin Cabinet with Flat Top, showing Double Case Bracket, Style A*, attached to top, for holding two pairs of cases.



Twenty-Case Wisconsin Cabinet with Galley Top and Copy Drawer.

Although made of hard wood, cherry finish, these cabinets are sold at the same prices as ordinary cheap-looking stained cabinets. Three-quarter and full-size cabinets are furnished with California job cases, described on page 848, which are preferable to Italic cases, as they afford more room for the caps. The bottoms are made flush with the floor, to prevent pi from getting underneath. The sides are double paneled and very tastefully moulded. Double case brackets may be put on top of the flat-top cabinets, making a very convenient stand, the regular height from the floor. *Galley-top Cabinets are kept in stock with twenty cases only, but can be furnished for twelve and sixteen cases to order, though not recommended.*

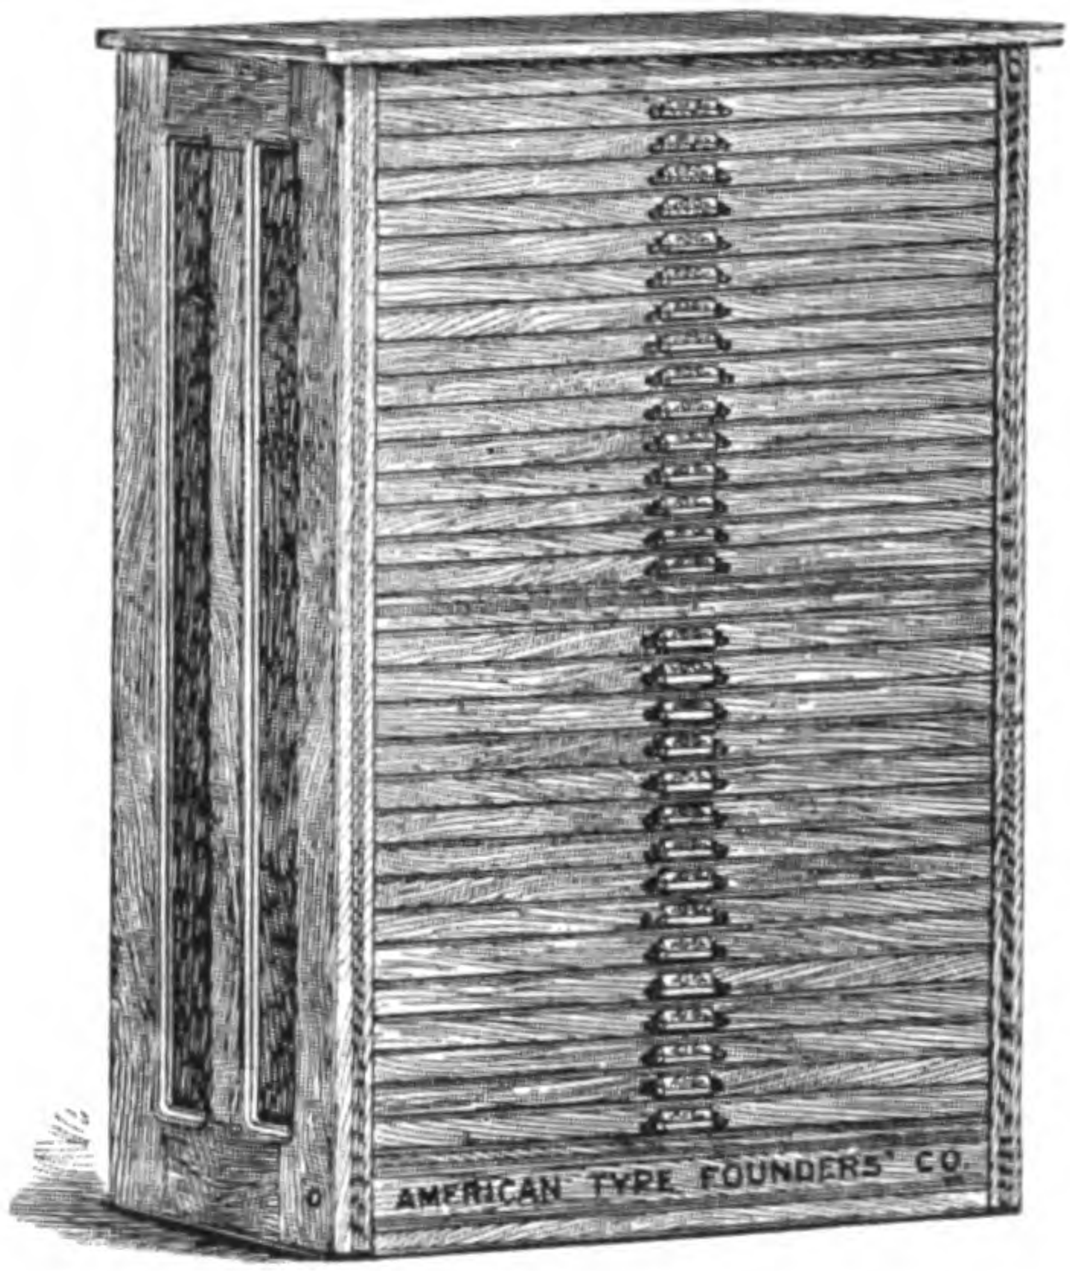
# AMERICAN STEEL-RUN CABINETS

**Hold 50 per cent. more type in same floor space occupied by Regular 20-Case Cabinets.**



By substituting steel for wood in the runs, the awkward upper projections on the fronts of regular cabinet cases (which in the ordinary are put on to hide the wooden runs) are dispensed with, and ten more cases are got into the same space. Cases are easier to set out of, and *all cases are within easy reach of compositors of average height.*

The cabinets are made of hard wood, polished, braced in center to prevent spreading, and California job cases (giving one-third more room for caps by dispensing with two superfluous rows of boxes) are used instead of Italic cases.

The height of the 30-case cabinets is 53 inches; of the 40-case, 68 inches. Cabinets can be supplied any height, but very high cabinets cannot be recommended owing to the loss of time in getting the top cases out of them.

Shows Steel-Run with Countersunk Screws.

Attention is directed to the common-sense assortment of cases in these cabinets. In thirty cases there will be required some cases for holding cap and small cap fonts.

The illustration herewith shows the steel run used in American Cabinets. Screws are countersunk.

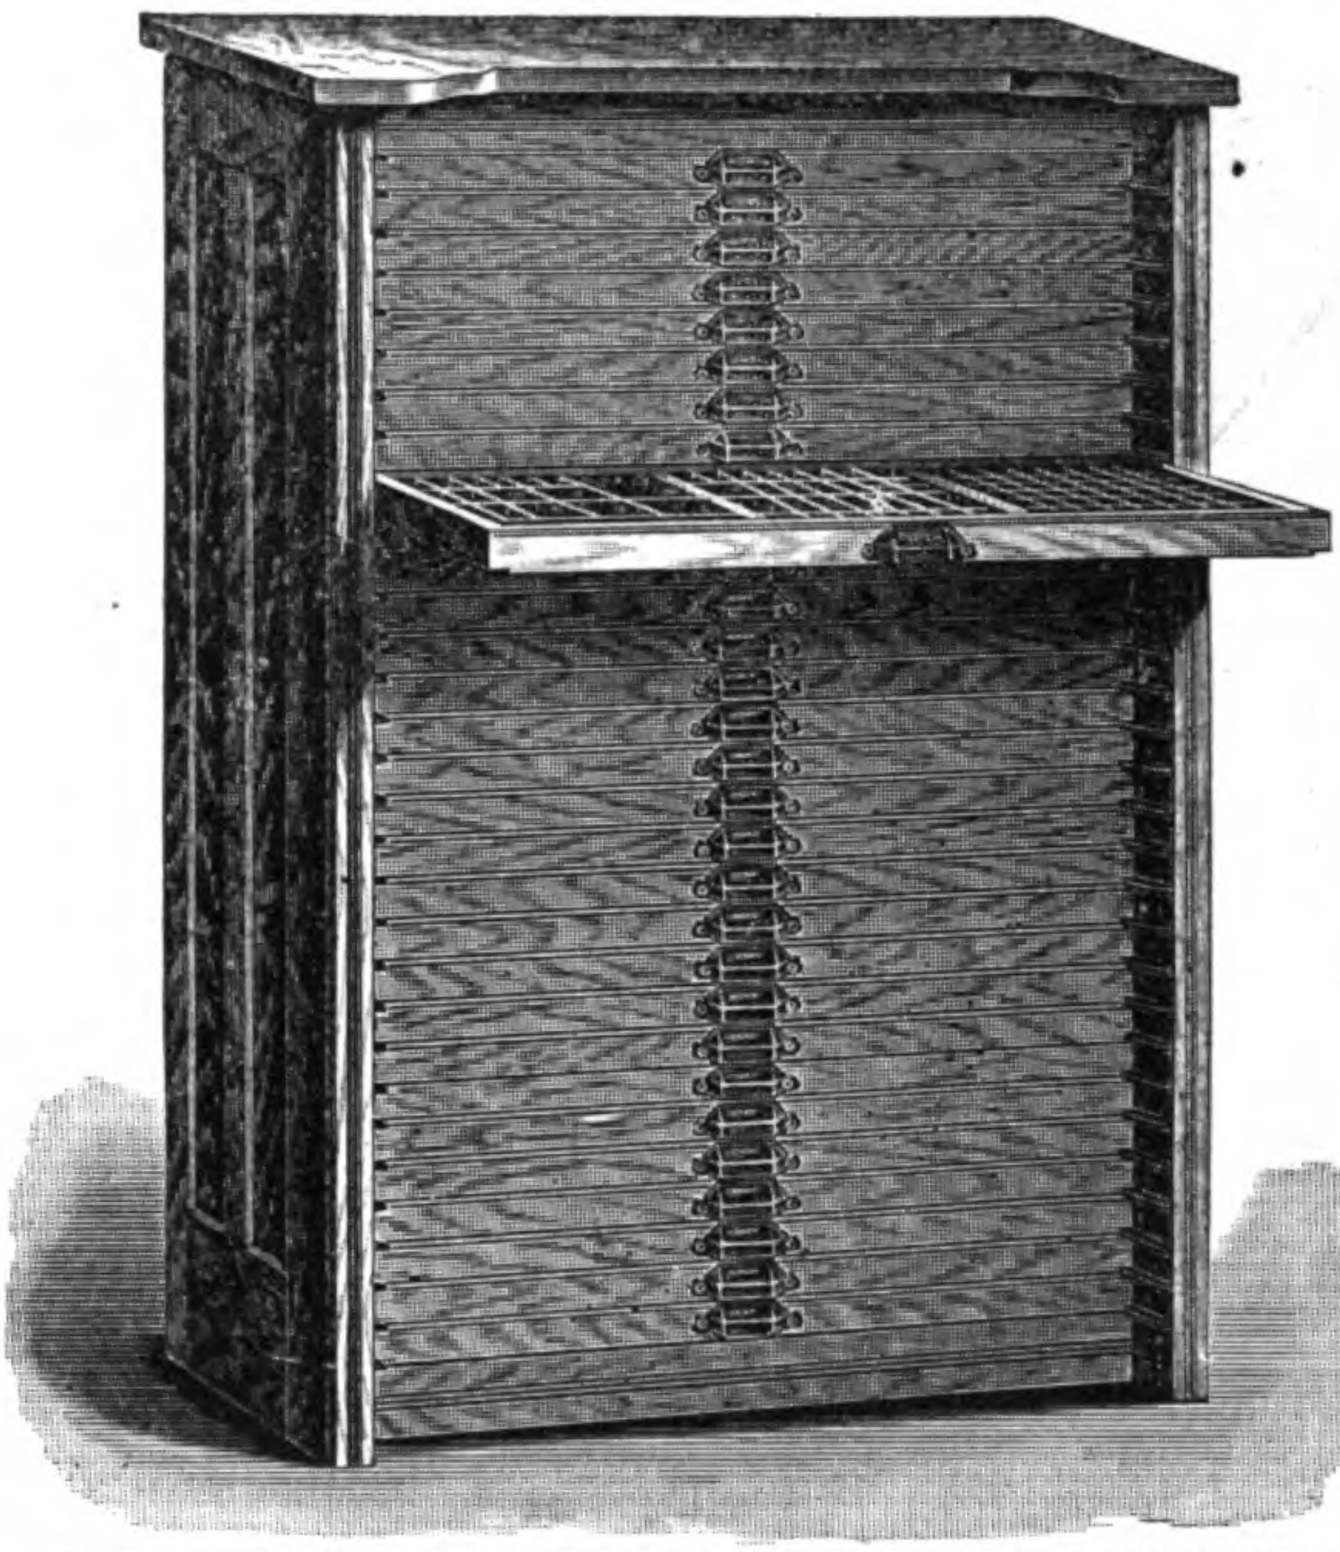
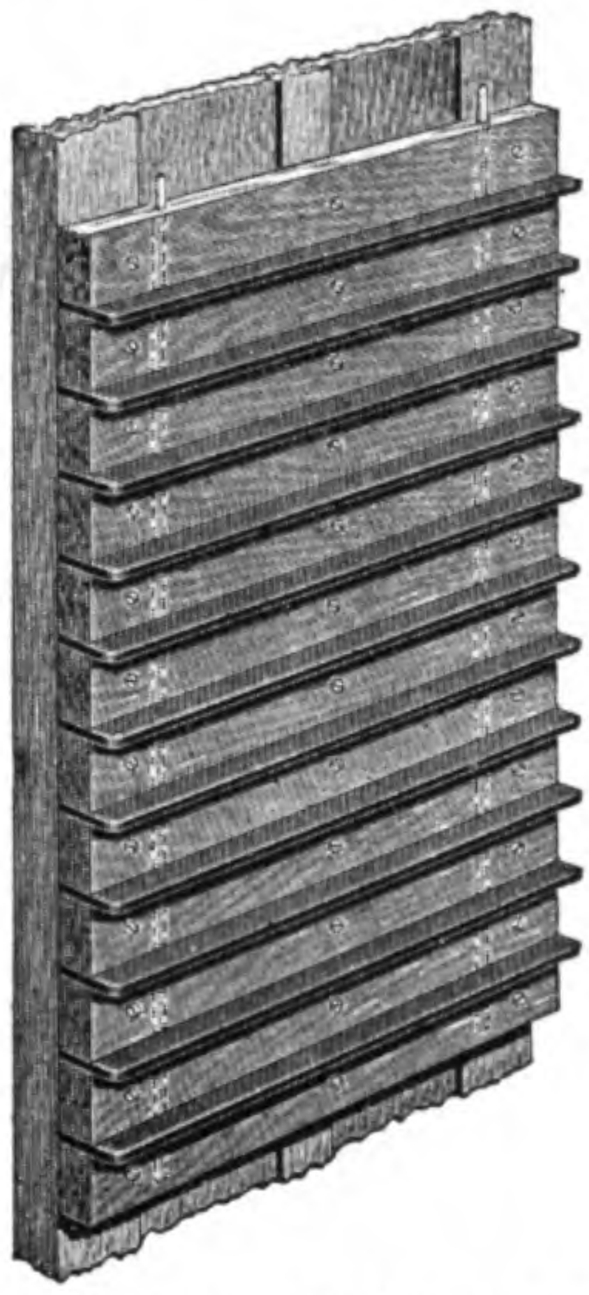
# PORTER'S PATENT EXTENSION FRONT STEEL-RUN CABINET.



Notice the extension sides, the chief merit of this cabinet. These sides project out far enough to temporarily hold any of the cases the rack for which may be too high or too low for the convenience of the compositor.



Shows construction of runs in Porter Cabinets. The steel runs are secured between wood, the wood screwed to sides, and two iron rods are passed through as extra strengtheners.

The sides of these cabinets are extended four inches beyond the fronts of the cases. These extensions serve the printer in two ways: (1) A case near the top of a cabinet may be taken from its rack and placed in a more convenient position for setting from, and will be held by the extensions without withdrawing another case. This cannot be done on any other cabinet. (2) The extensions permit cases to be drawn out further from the racks than is possible in other cabinets, making it easier to set out of the rear boxes. In addition, these cabinets have all the best points of other cabinets, such as steel runs, "New Departure" cases, hard wood throughout, and are stronger than any other cabinets, as will be seen by examining the sectional illustration above.

The extension sides make it practicable to use higher cabinets, containing more cases in a tier, than can be advised where ordinary cabinets are used.

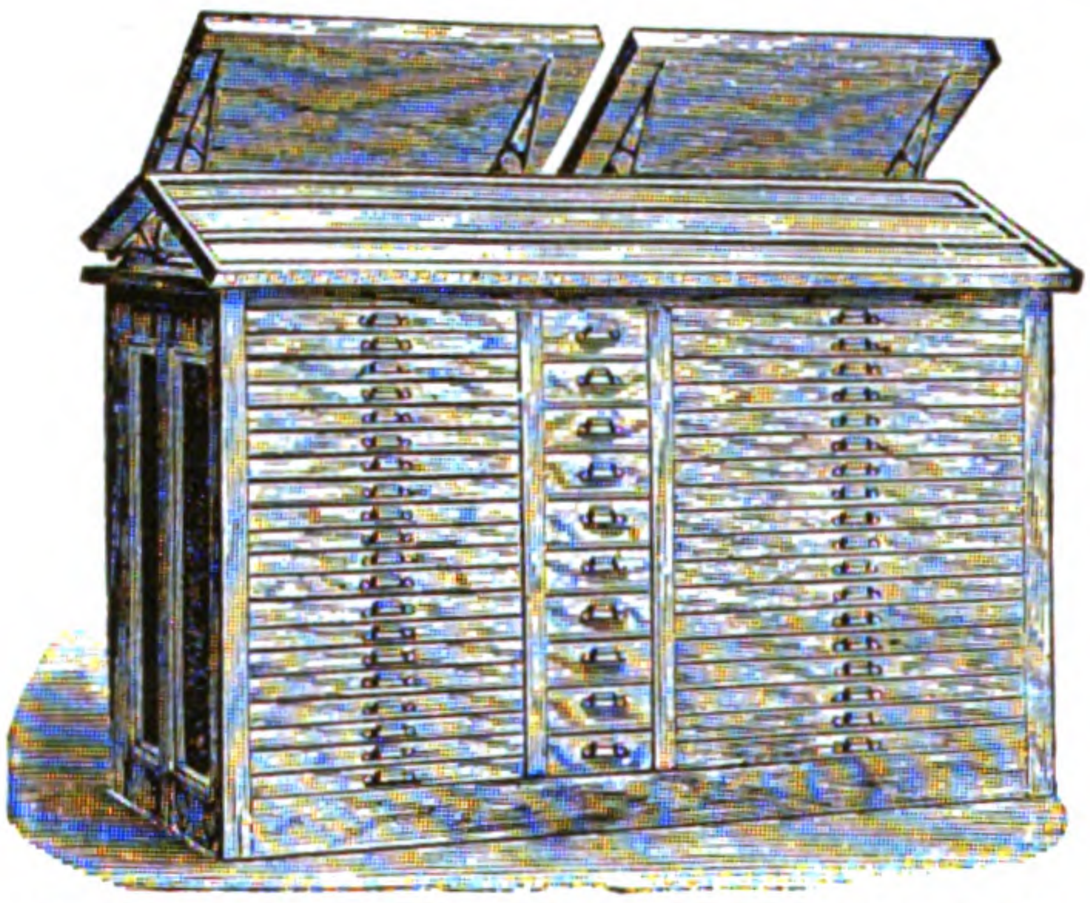
| No. 9, | with 30 full-size blank cases, one tier, height 53 inches | 45 00 |
| No. 10, | with 40 full-size blank cases, one tier, height 68 inches | 60 00 |
| No. 11, | with 50 full-size blank cases, one tier, height 84 inches | 75 00 |

Porter Cabinets of greater height can be supplied if desired. As all the above cabinets have flat tops, we do not list any double cabinets. A double 25-case (50 cases in all) will cost **$85 00**; a double 30-case, **$100 00**. Single tier, flat-top cabinets are always preferable to double, because it is easier to find positions for them. They are moved easier, and there is no saving in space by using double flat-top cabinets.

# "AMERICAN-POLHEMUS" CABINETS.

**All Hard Wood, Cherry Finish.**



Front view of American-Polhemus Double Cabinet, showing Sort Drawers, Galley Top and Jobbing Cases.

The object of the American-Polhemus Cabinet is to save time and space. Time is lost on the ordinary cabinets by stationing the compositor in front of twenty cases, all frequently in use by other men, who, when setting or distributing from them, keep the man at the cabinet idle. On the American-Polhemus Cabinets the job cases are unobstructed, and the compositor stands at the back, where he cannot be interrupted. If he is setting solid matter he can empty his sticks, without walking a step, on a galley kept under his lower case, as the cases are held by the Patent Tilting Bracket and Galley Rest. Illustrated on page 858.

Every inch of space on the American-Polhemus Cabinets is utilized to advantage. The galley top or bank is a most useful addition. The space between the cases is used as a sort cabinet. The top is flat, and tied-up matter may be kept on it, as the iron case brackets admit of easy access to the space under the cases and galley top. The brackets which hold the cases project into the alley eight inches, giving the compositor plenty of knee-room, while saving floor-space.

## STEEL-RUN AMERICAN-POLHEMUS CABINETS.

**All Hard Wood, Cherry Finish.**

These cabinets are similar to the American-Polhemus Cabinets, illustrated on these pages, except that the use of steel runs instead of wood runs increases their case-holding capacity without changing floor space or height.

No. 5½. Double American-Polhemus Cabinet—Contains 18 full-size California job, 3 full-size triple, 4 full-size cap, 20 three-quarter California job, 5 three-quarter cap, and 2 pairs of full-size news cases on top, 10 sort drawers, a galley top, and 2 pairs of patent tilting brackets . . . . . $95 00

No. 6½. Double American-Polhemus Cabinet—Contains 43 full-size California job, 4 full-size cap, 3 full-size triple, and 2 pairs of full-size news cases on top, a galley top, and 2 pairs of patent tilting brackets (*no sort drawers*) . . . . . 95 00

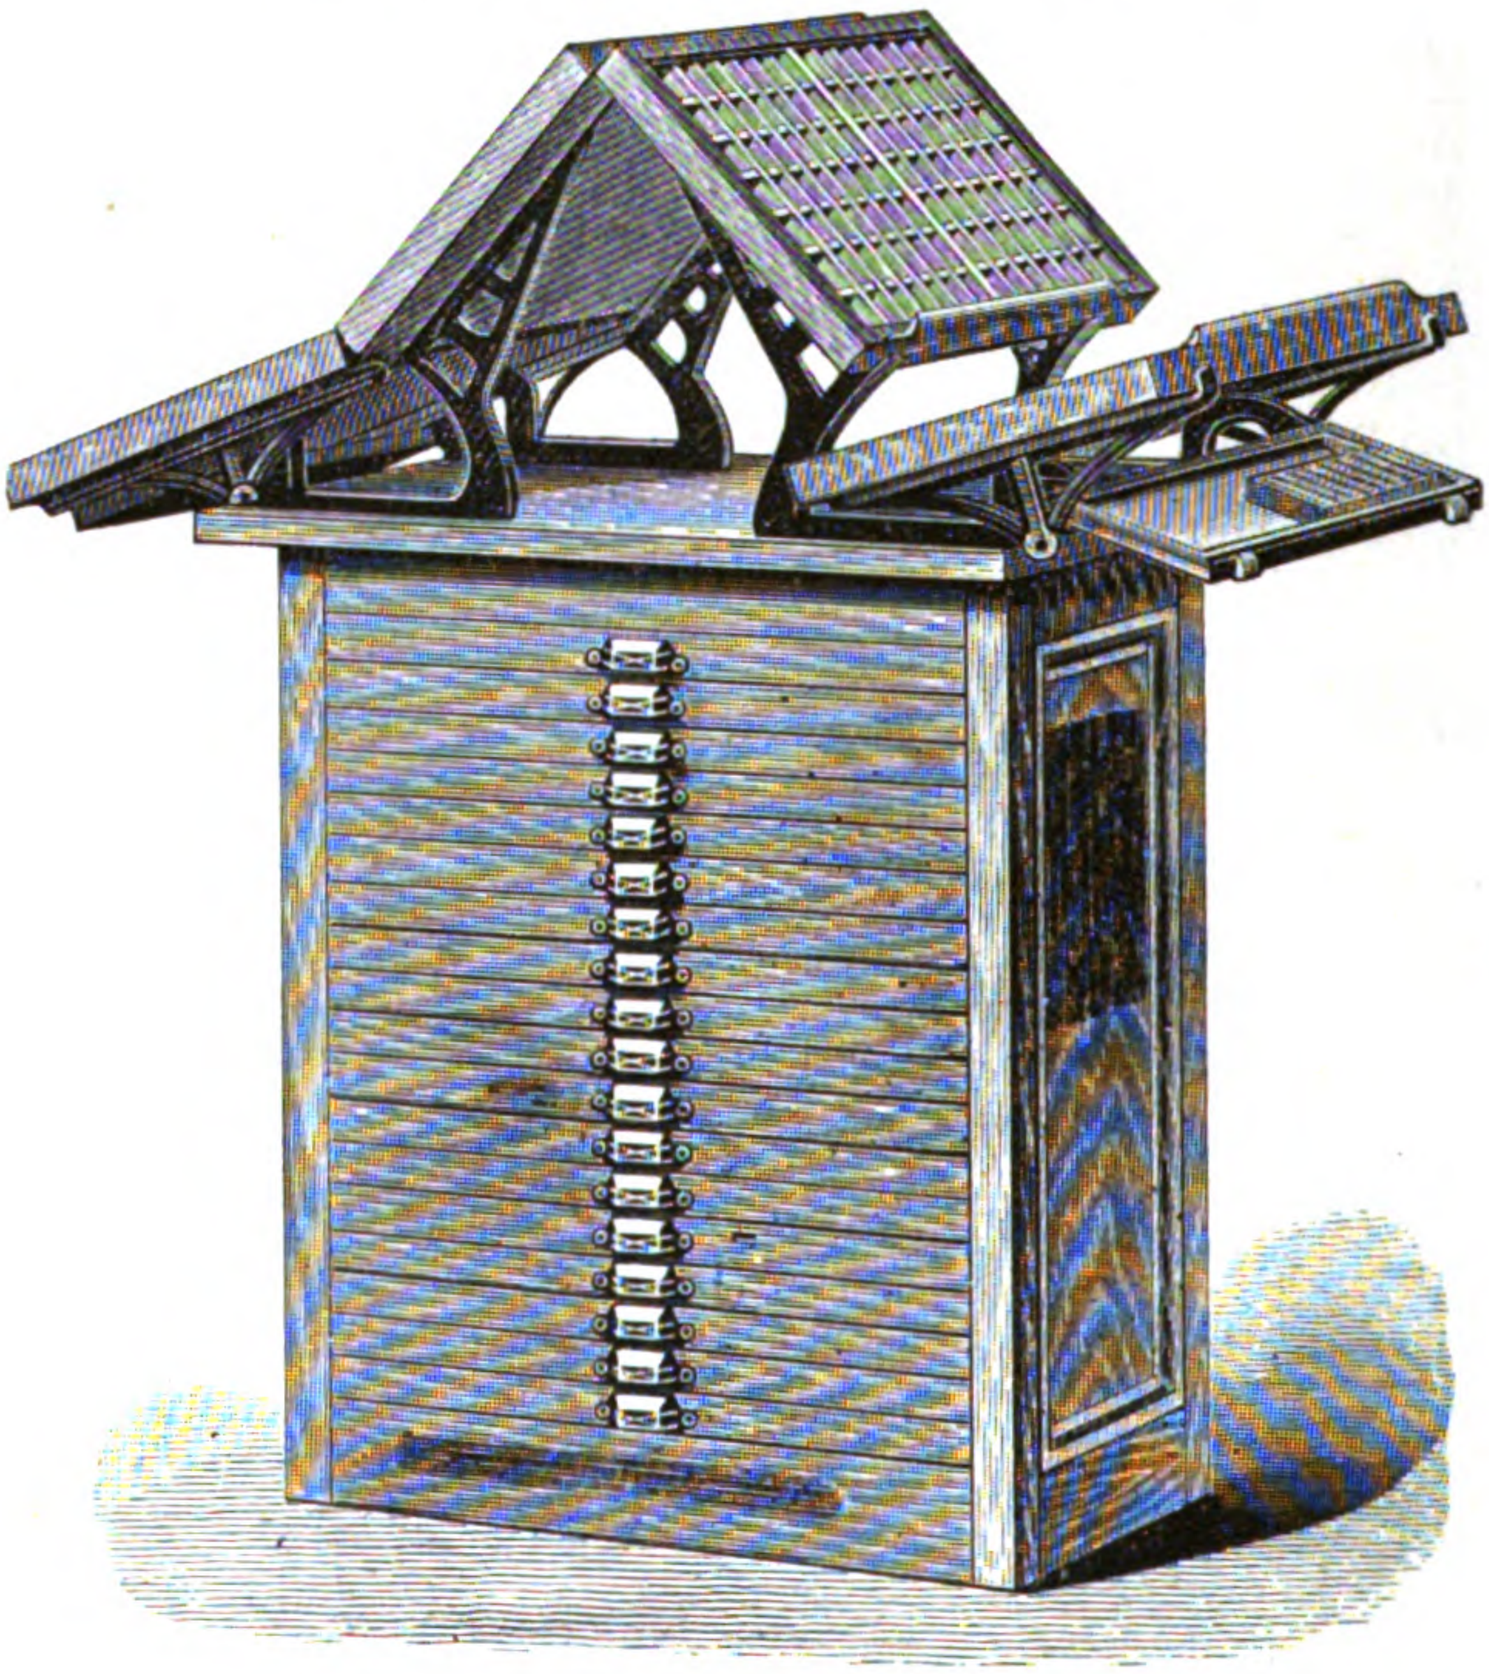
Front of American-Polhemus Triple Cabinet, showing Jobbing Cases, Sort Drawers, and Galley Top or Bank.

## WISCONSIN WINDOW CABINET.



Specially designed for placing in front of a window, as it does not obstruct the light, of which the cases on top get the full benefit. Two men may work undisturbed at the sides, while the job cases in front are convenient for other men. The top is flat, and useful for holding tied-up type.

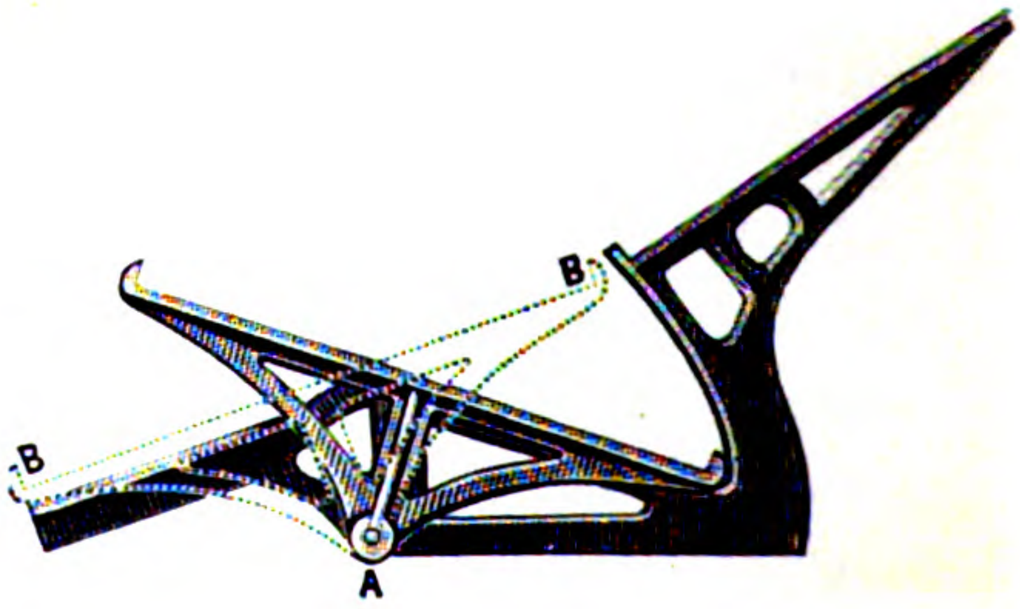
These cabinets have the patent tilting bracket and galley rest, which enables a compositor to empty his stick without leaving the cabinet by simply tilting his lower case, as shown in the cut, thus exposing the galley.

Wisconsin Window Cabinet, with 2 pairs of Patent Tilting Brackets and 18 full-sized California job cases, 2 pairs of news cases on top, hard wood, cherry finish . . . . . $36 00

## PATENT TILTING CASE BRACKET.

**Used on Wisconsin Window and American-Polhemus Cabinets.**

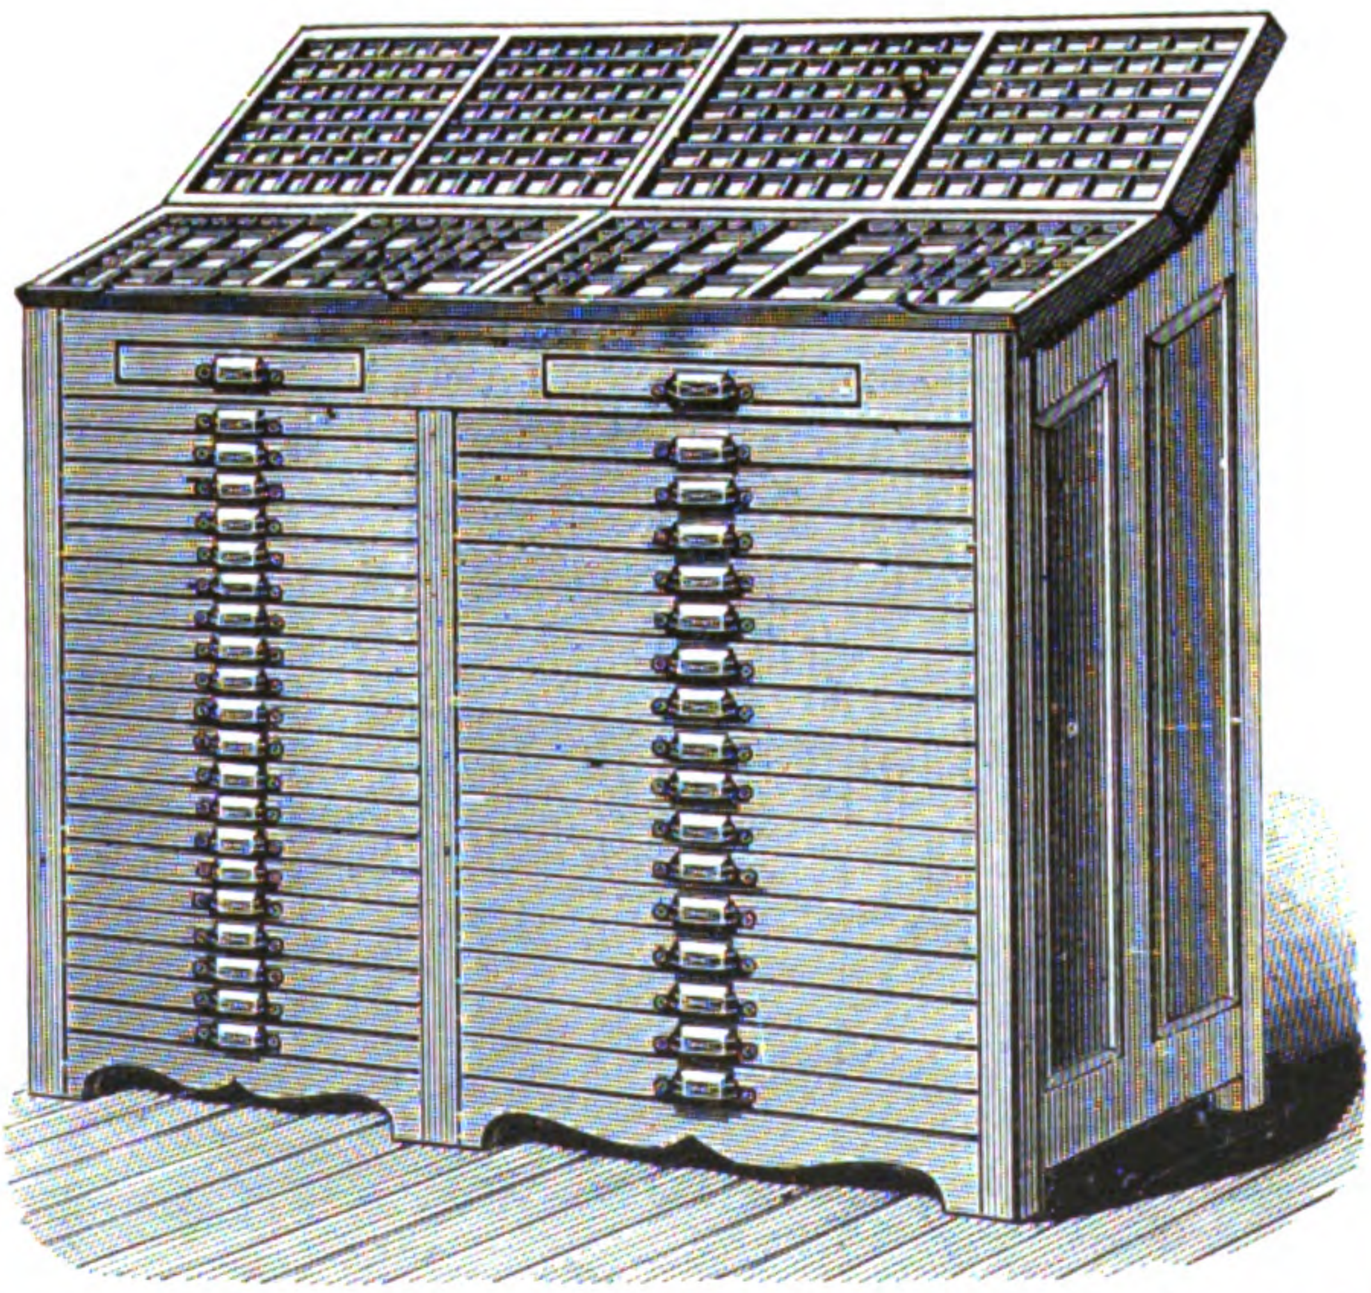
B B (outline) shows bracket holding case in position for setting. Shaded cut shows bracket tilted up, allowing compositor to empty on galley below lower case, which is more clearly shown in cut of Wisconsin Window Cabinet printed above. These brackets are also supplied with all American-Polhemus Cabinets.



## COMBINATION CABINET No. 1.

Made of hard wood, cherry finish. Contains 18 full-size California job, 18 two-third job, 2 pairs full-size news cases on top, 2 copy drawers, and 10 sort drawers with partitions . . . . . $75 00

## EAGLE CABINET.



Made of hard wood, cherry finish. Contains 40 cases in all, including 12 full-size California job, 2 each full-size triple and cap cases, 20 three-quarter California job cases, 2 pairs full-size news cases on top, and 2 copy drawers . . . . . $70 00

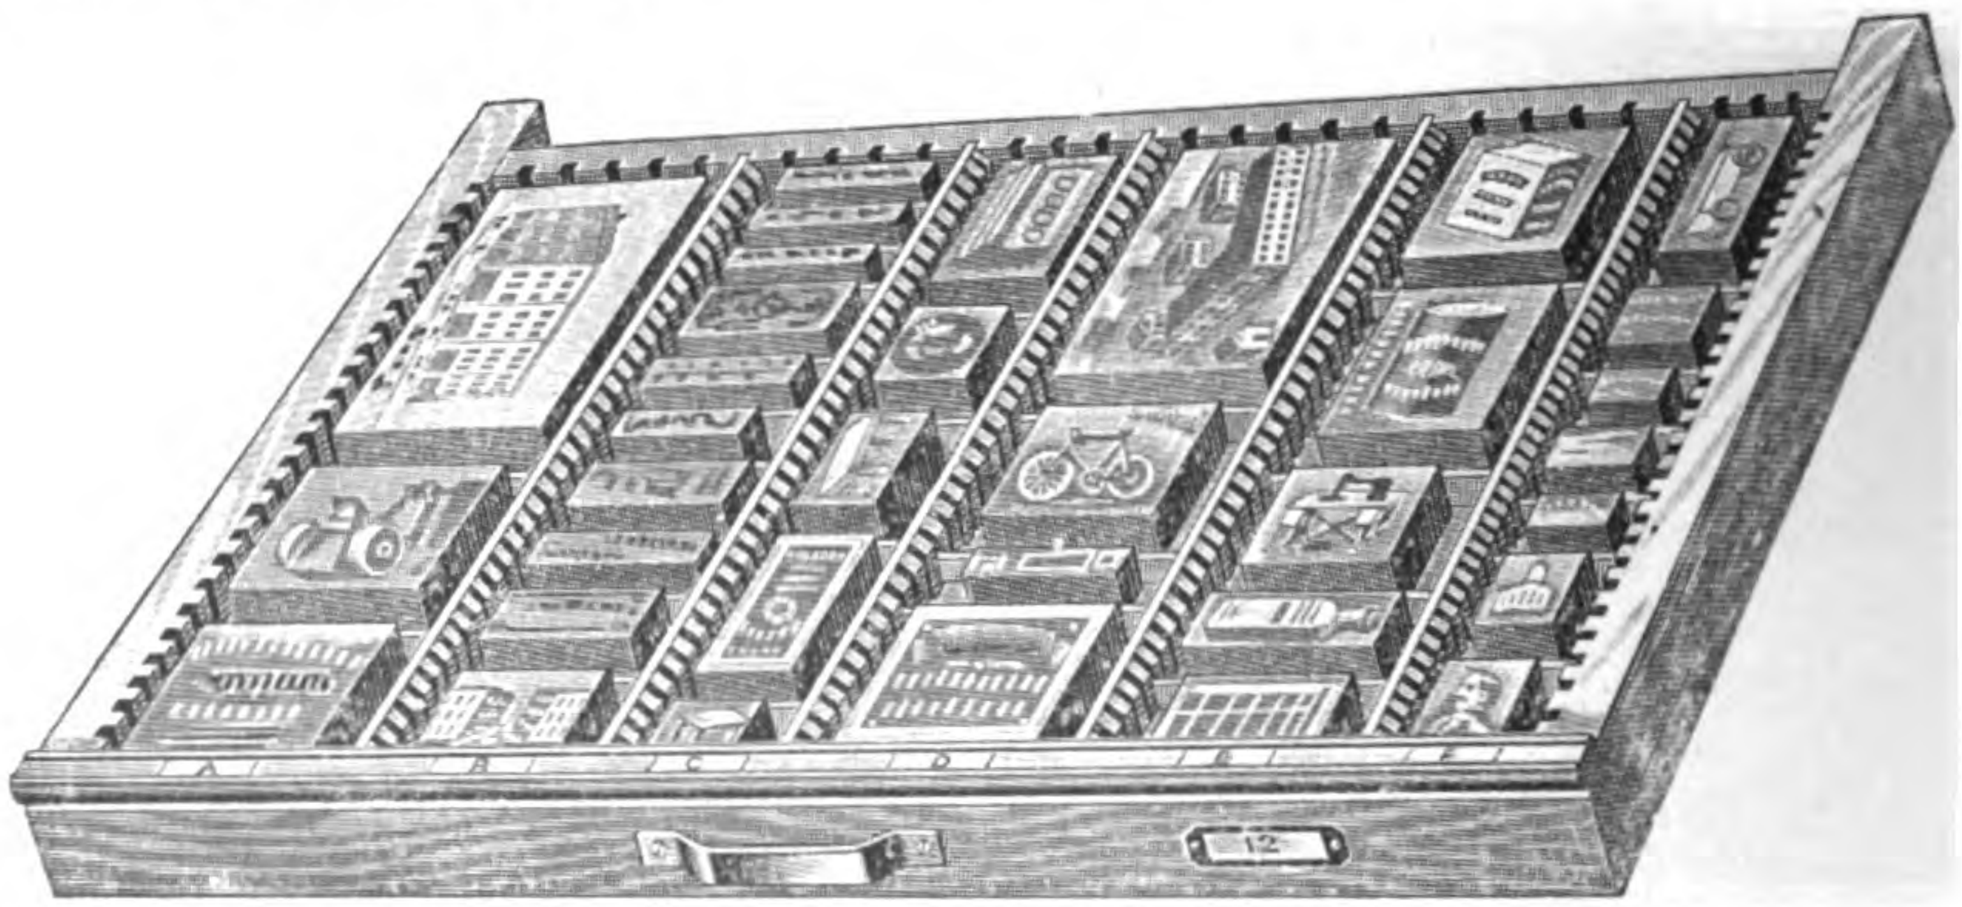
# INDEXED ELECTRO-TYPE CABINET.

**Antique Oak Finish.**

Fitted with the special cases illustrated below, each furnished with strong adjustable slotted partitions, each case numbered in front, and each section in the case designated by initial label, for which a secure holder is provided. The cuts in each lengthwise section are separated and held in place by shallow crosswise slats. An Index Book is furnished with each cabinet in which the cuts are indexed as follows:

| ORIGINAL CUT | | | NAME OF CUT | ELECTROTYPES | | | | |
|---|---|---|---|---|---|---|---|---|
| DRAWER | SECTION | DIVISION | | DRAWER | SECTION | DIVISIONS | | |
| 12 | D | 3 | Bicycle | 31 | E | 1 | 2 | 3 |
| 12 | A | 2 | Lawn Mower | 33 | A | 4 | 5 | 6 |
| 12 | E | 3 | Sewing Machine | 35 | B | 1 | 2 | 3 |
| 12 | D | 4 | Factory Plant | 30 | C | 7 | 8 | 9 |

These cabinets meet in every respect the requirements of not only printers but of all manufacturing concerns that use cuts largely. Printers will do a favor to their customers of this class by calling their attention to these new cabinets. They are substantially and handsomely made of ash, finished in antique oak. The cases slide on steel runs, so that they take up the least possible space. The dimensions, weight and prices are given on next page.



Case furnished in Indexed Electrotype Cabinets.

Note that every cut is in a distinct compartment, and that as many sections and divisions of sections can be made as are desired. The plan of the index printed above refers to the case shown here.

The fifty-case and sixty-case cabinets are furnished in one or two tiers, as desired.

**SPECIAL NOTICE.**—The above prices include the cabinets fitted with a full equipment of division slats, including five of the slotted section divisions for each drawer in the two-thirds size cases, and six for each drawer in the three-quarter and full-size cases; also with a large assortment of cross divisions, in various lengths. Each drawer is fitted with a metal number plate, as shown in the illustrations on preceding page. One index book is furnished with each cabinet.

Flat-Top Sixteen-Case Electro Cabinet.

# ELECTRO AND CUT CABINETS.

**Antique Oak Finish.**

These cabinets are filled with blank cases, and are made of polished ash, antique oak finish, with bronze case-pulls. The cases have extension backs. In addition to the ordinary use of the printer, these cabinets can be recommended to advertisers for keeping their wood cuts, etc., for keeping samples of hardware, confectionery, fancy stationery, for seeds, and for many other purposes.

All sizes can be supplied with galley tops at an advance of $3.00 on flat-top prices, but galley tops are not recommended except on 20-case cabinets.

No. 5 Wood-Type Cabinet, with Galley Top. Occupies nine square feet floor space, and affords one hundred and twelve square feet for storage of type.

## WOOD-TYPE CABINETS.

Very substantially constructed of hard wood, cherry finish. The cases are slotted on the sides, and have movable strips which may be adjusted to Picas. The cases in the Mammoth Cabinet (23 × 44 inches) have a center bar, and cases in the Regular Cabinet (23×32 inches) have no center bar.

These cabinets afford the most economical method of keeping wood type. The top of cabinet is available for use in laying out lines. They save the time lost in climbing to shelves, and the wood type is kept clean and is less liable to warp.

## BOOKBINDERS' CABINETS.

Made of hard wood, cherry finish, with bronzed pulls on each case. The cases are made in exactly the same style as printers' cases. These cabinets occupy a space of 20×20 inches, and may be put on or under a bench. "A place for everything and everything in its place" is a rule bookbinders should live up to, and these cabinets enable them to do so.

Case used in Bookbinders' Cabinet.

# ROWEN BORDER AND SCRIPT TYPE CABINETS.

Rowen Border Cabinet with Twenty Cases.

These cabinets supply the long-felt need of a proper receptacle for borders, keeping them in compact shape and preserving the face.

The cases in these cabinets are 10×12 inches inside, and are tilted sufficiently to keep the type on its feet. The borders or type are held between movable division strips, which are 18 Points wide, while the slots into which these strips fit are set 6 Points apart, so that they can be adjusted to hold 6, 12, 18, 24, 30, 36, 42, 48, 54, 60, or 72 Point bodies, while such irregular and seldom-used bodies as 8 and 9 Point may be carried in the 12-Point drawers, or special strips may be procured for them.

For script type a quantity of metal pinch springs is furnished with each cabinet, for inserting between the different letters in a font, so that if all the letters "d" are removed, the pinch spring holds the letters "e" on their feet. The advantages of keeping delicate scripts in cases where the faces of the letters are not subject to friction and scratching will be apparent to all.

## HANDY SORT CABINETS.

These cabinets are fitted with serviceable sort drawers which should supplant the various cigar-box-tin-can arrangements which disgrace so many offices. The drawers are 8 × 20 inches over all, and two inches deep. The cabinets are very strong, made of hard wood, and remarkably low-priced. The drawers, which are also for sale separately, have movable partitions, and may be adjusted to the special requirements of any printing office. All drawers have strong bronze drawer-pulls, whether sold in cabinets or separately.

A picture of the drawer is shown below. Drawers are sold separately if required.

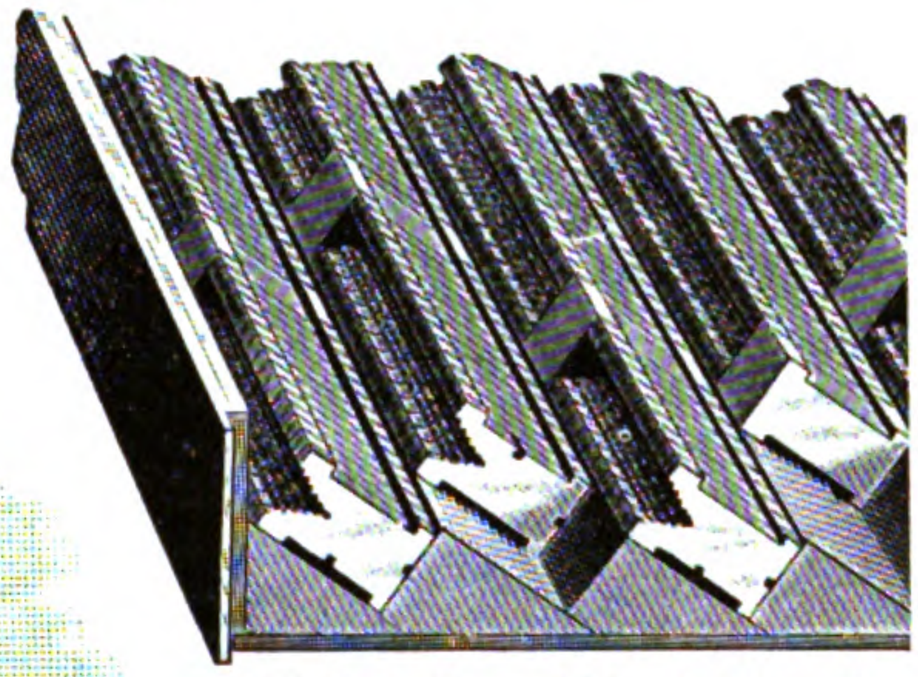
No. 4. 12 matrix and 1 tool drawers, height 43 ins. . . . . 40 00

Six metal slugs, same shape and size as a matrix and ¾-inch wide, furnished with each drawer. These hold up the matrices at ends of lines.



Detailed Section of Matrix Drawer, showing Matrices in place.

## SPECIMEN CABINETS.

Made of ash, with antique oak finish. These cabinets are handsomely made, and will be an ornament to any office.

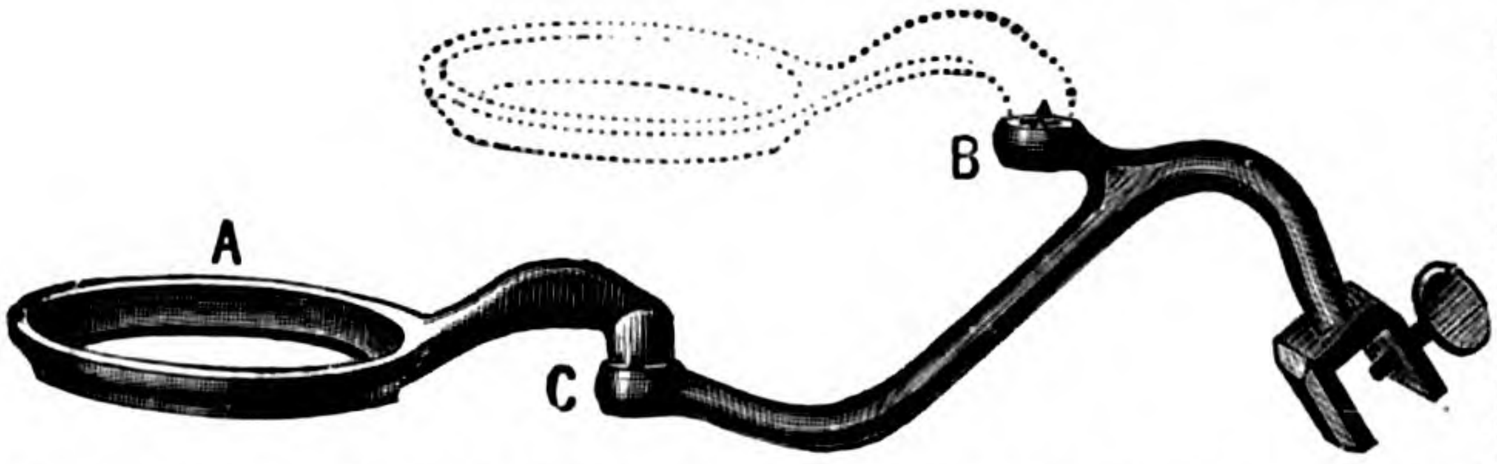
The drawers have movable partitions, and are made in two depths—2½ inches and 5 inches. The No. 1 Cabinet is the proper height for placing a letter-copying press on.

The methodical classification and preservation of specimens in a cabinet enables customers to decide on what they want quickly, and in many cases suggests other requirements. Let the public see what you have to sell, and they will become buyers.

No. 1, 8 drawers, 26 inches wide by 19 inches deep by 42 inches high . . . . . $14 00
No. 2, 12 drawers, 26 inches wide by 19 inches deep by 50 inches high . . . . . 20 00

No. 1 Specimen Cabinet, 26 inches wide, 42 inches high, and 19 inches deep.

## CHALLENGE LAMP HOLDER.



A most convenient and safe attachment for holding a lamp over the compositor's case. It will be readily understood by reference to the cut that the fount holder A can be instantly raised from C to B, as shown by the dotted lines, to adapt the position of the light to suit the compositor. Small thumb screws at the top of B and C, with suitable recesses in A, retain the light perfectly stationary in any position.

## TYPE-HIGH GAUGE.

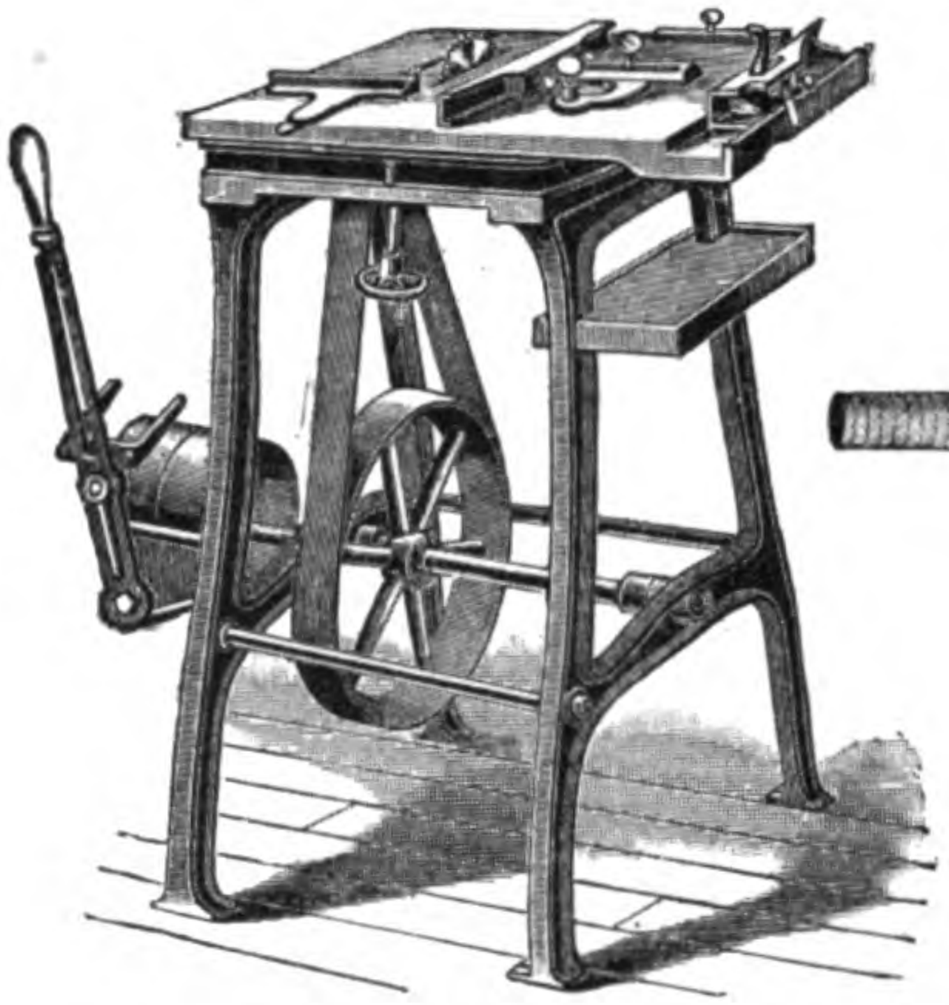
Much time may be saved in the press room if the maker-up will test all electrotypes, and have those that are high or low brought to the proper height by an electrotyper, or do it himself, before the form goes to press. The wise employer should insist on the use of this Gauge.

Price, each . . . . . $2 50

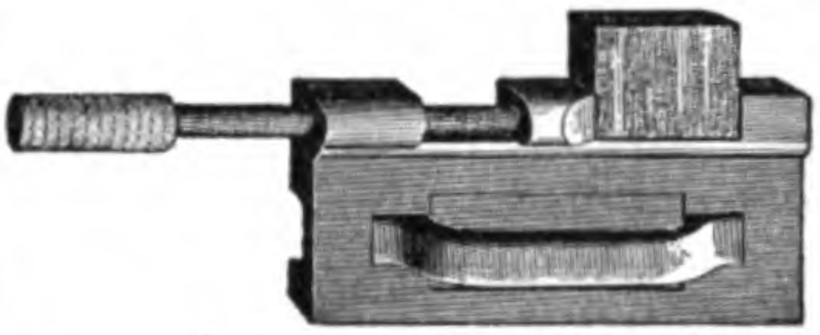
*See Type-High Machine on opposite page, and Backing for Electrotypes on page 978.*

## PRINTERS' SAW TABLE,

**With Shoot-Board Attached.**



A very necessary machine in large printing offices. It will saw wood, metal or brass, and will trim wood and metal accurately from the merest shave upward. It affords the quickest and most accurate method of cutting slugs, furniture, thick brass rule and plates, and as it is fitted in the most complete manner with gauges, all trimming and cutting is done with perfect trueness and squareness. An attachment for sawing linotype slugs is furnished for $15.00 extra.



Attachment for Cutting Linotype Slugs.

This is a thoroughly well-built machine, equal to similar machines used by electrotypers, made of iron and steel, with accurate adjustable gauges. The saw is raised or lowered by means of a clamp-screw set under the table. The countershaft is attached to the saw, and should not run less than four hundred revolutions per minute. The driving pulley is 7 inches in diameter, for 2½-inch belt. Size of table is 18×24 inches, height 40 inches, and floor space occupied 24×32 inches.

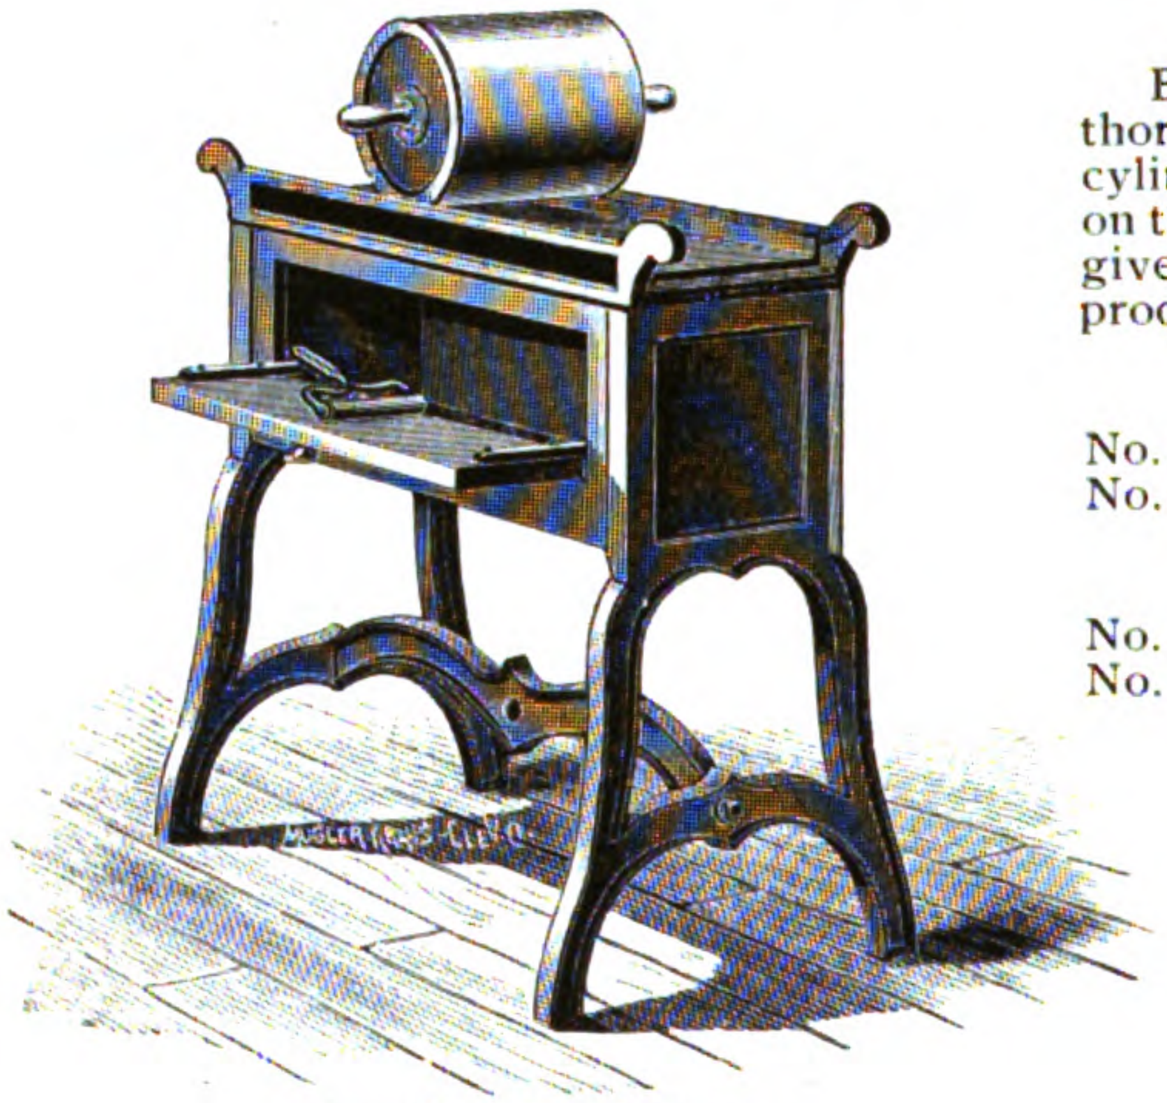
# GALLEY PROOF PRESSES.



American Proof Press.

## AMERICAN PROOF PRESS.

Built in the most substantial manner, thoroughly braced, with accurate bed and cylinder. The cylinder is much heavier than on the average proof press, and consequently gives a much better impression. The best proof press made.

**With Iron Stand.**

No. 1, 10×31 inches inside . . . . . **$30 00**
No. 2, 16×31 inches inside . . . . . **42 00**

**Without Stand.**

No. 1A, 10×31 inches inside . . . . . **$22 50**
No. 2A, 16×31 inches inside . . . . . **30 00**

Each proof press is furnished with blanket, brayer frame and stock.

## CHALLENGE PROOF PRESS.

Lighter frame and lighter cylinder than the American Proof Press. The best low-priced proof press in the market, and equal to many listed at higher prices.

10×31 inches inside . . . . . **$27 00**

Each proof press is furnished with blanket, brayer frame and stock.

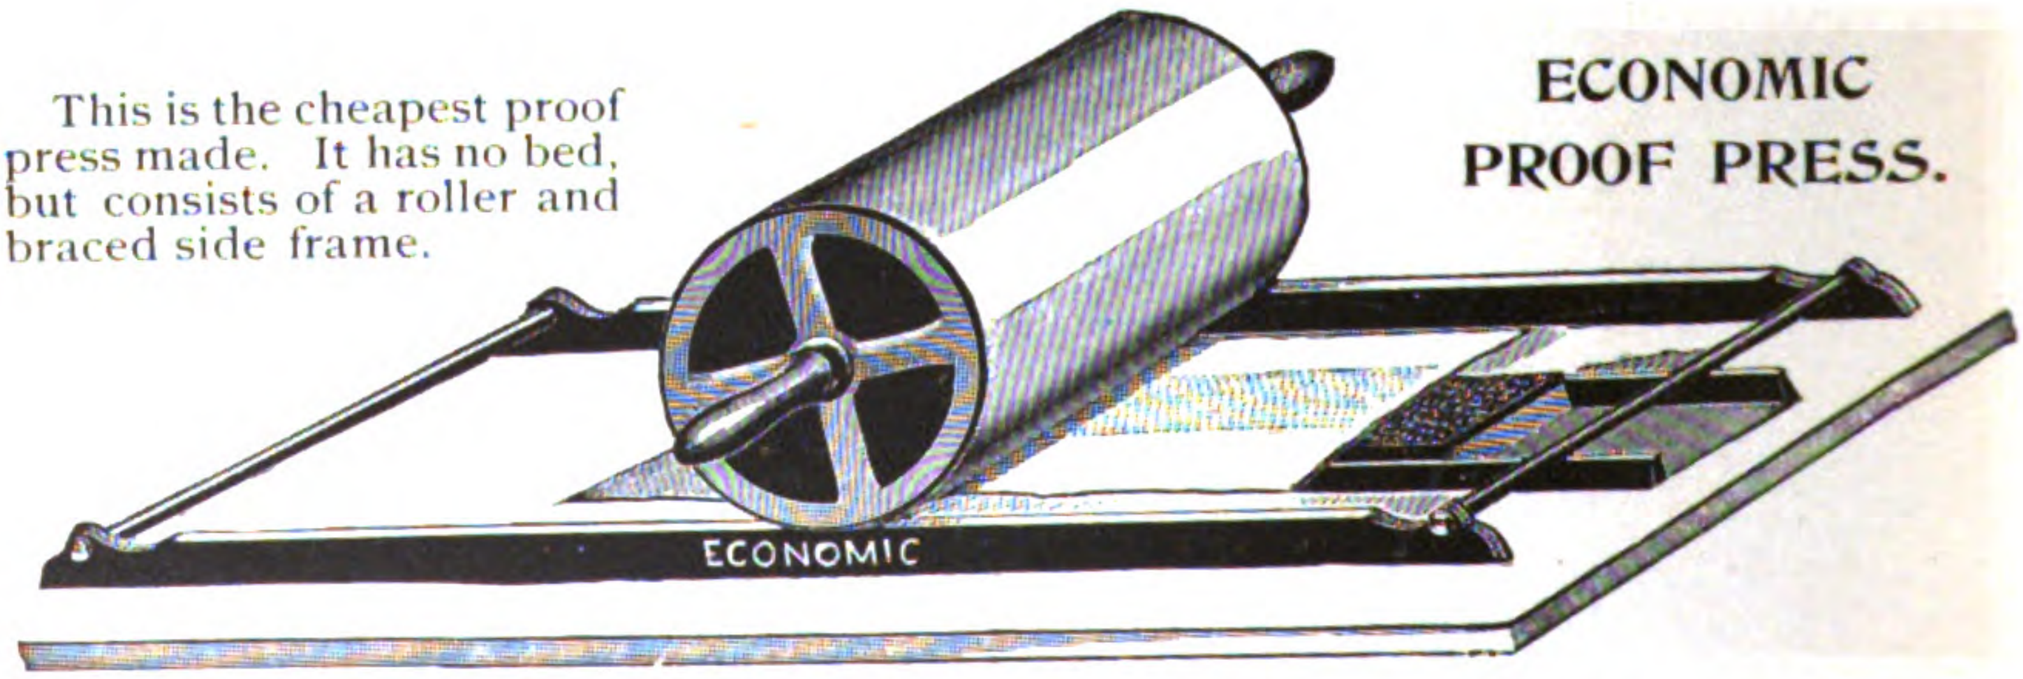
## RELIANCE JOB GALLEY PRESS.

Designed for taking proofs of job work.

No. A, without table, takes 14×20 job galley . . . . . **$22 50**
No. B, without table, takes 15×22 job galley . . . . . **$25 00**

## ECONOMIC PROOF PRESS.

This is the cheapest proof press made. It has no bed, but consists of a roller and braced side frame.



A mould is provided for casting weights which can be placed inside the cylinder to increase pressure according to character of the work.

10×34 inches inside, complete with blanket and weight mould . . . . . **$13 50**

## WEBB SUCCESS SELF-INKING PROOF PRESS.

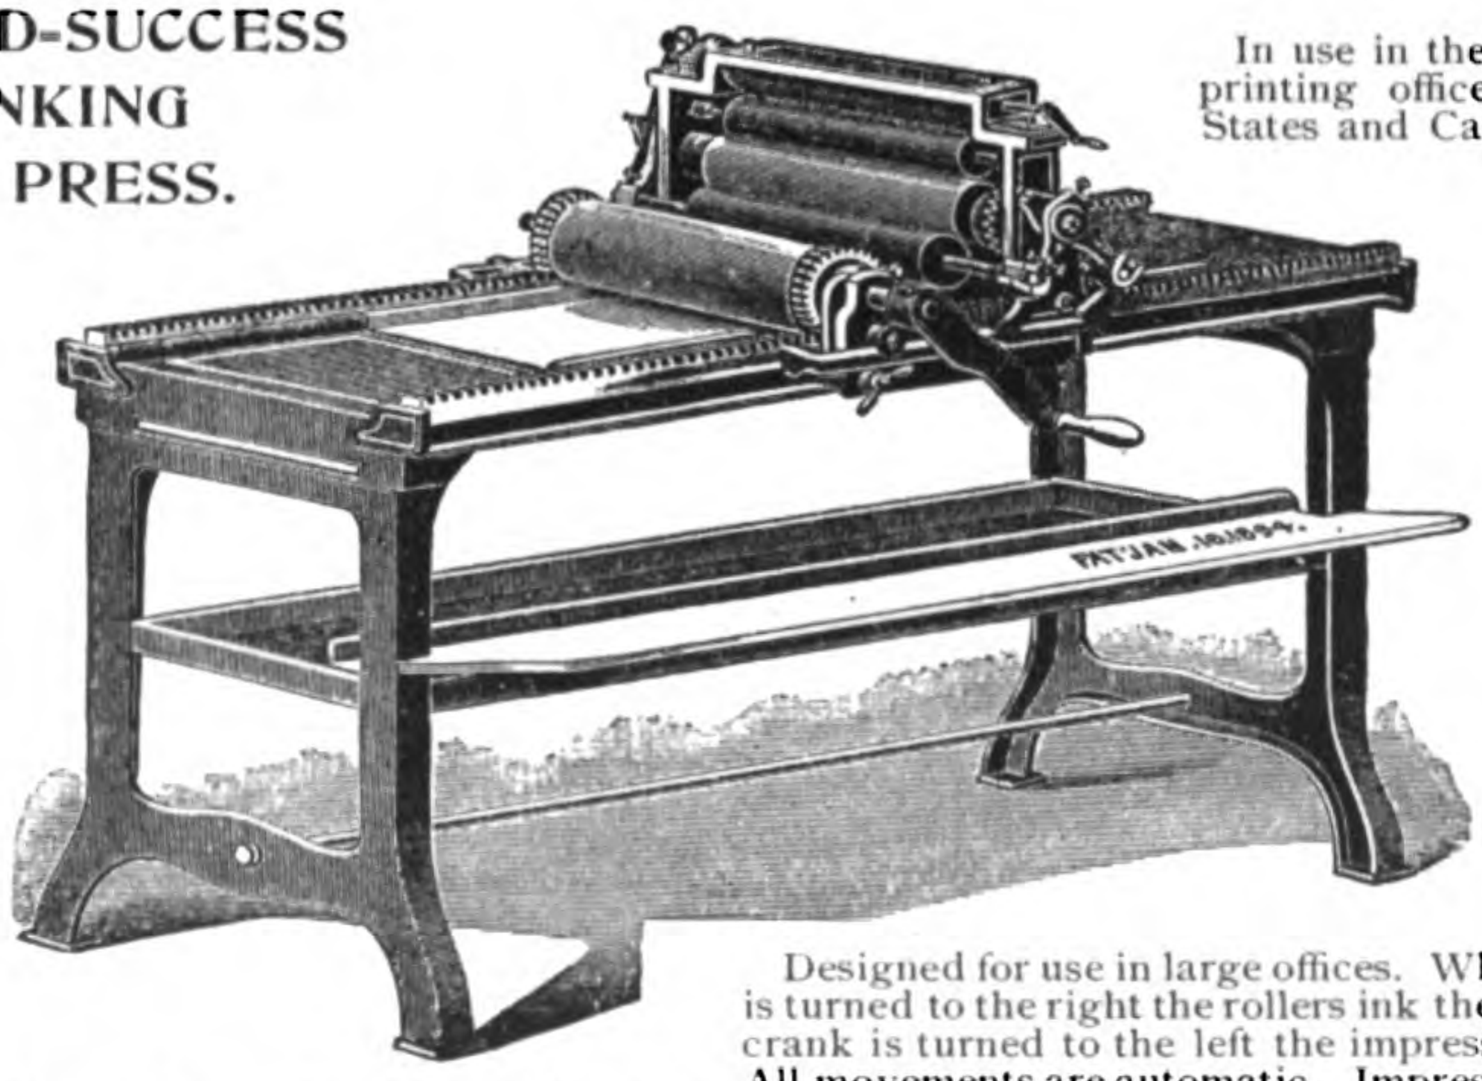
**Prints from One or Two Rolls of Paper.**

Designed for use in newspaper offices. Used by all the leading New York and Boston daily papers. It operates in the same manner as the Herald-Success Press, described below, with the addition of working from webs of paper.

With 10-inch bed, for one web of paper, for proving single, double or triple-column galleys . . . . . $300 00
With 12-inch bed, designed for taking two webs and taking two single-column galley proofs at once, or double, triple or quadruple column proofs by using wider single webs . . . . . 400 00

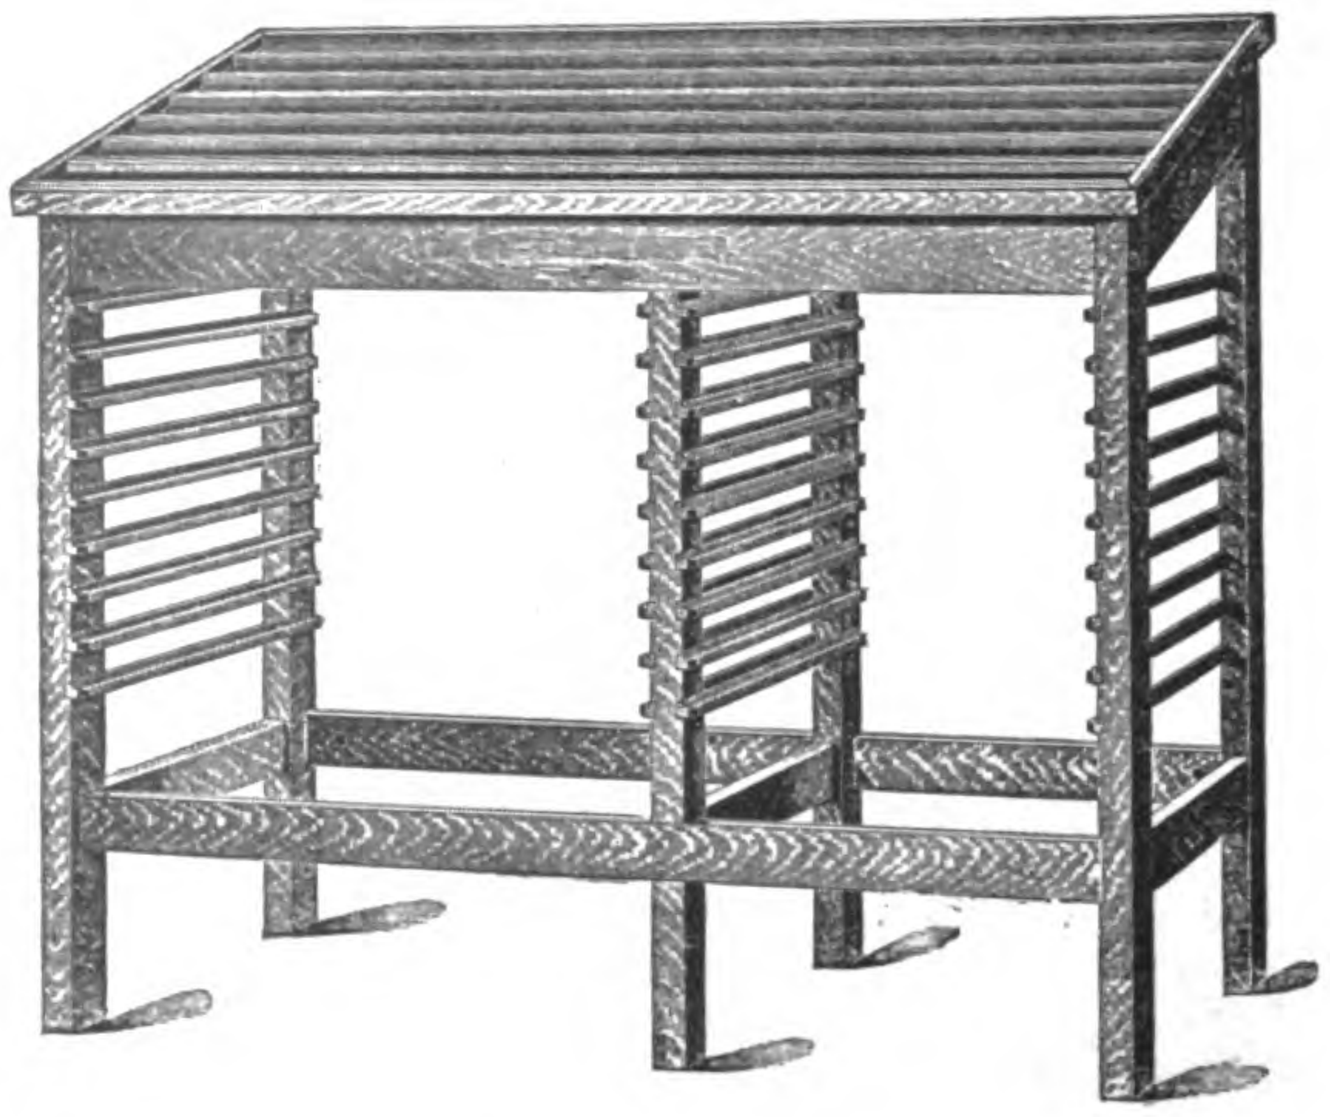
## HERALD-SUCCESS SELF-INKING PROOF PRESS.

In use in the government printing offices of United States and Canada.



Designed for use in large offices. When the crank is turned to the right the rollers ink the forms, when crank is turned to the left the impression is taken. All movements are automatic. Impression cylinder is covered with seamless vulcanized rubber, taking clean and sharp impressions.

With 18-inch bed, capable of proving four single-column galleys at one impression, or large magazine pages . . . . . $300 00
With 24-inch bed, adapted for full-page newspaper proofs . . . . . 400 00



# STANDING GALLEYS.

**Made to Order.**

Buyers may have these made to any dimensions they desire, at prices proportionate to those quoted below for the sizes and styles commonly used.

The space underneath may be utilized in various ways. In place of the case racks, as shown in the cuts, galley shelves and racks or letter boards can be put in. In ordering Standing Galleys, or in sending for estimates of cost, it is necessary to be *explicit* as to measurements and other requirements.

The regular width of single columns is three inches; of double columns, six inches; but these may be varied. The column strips are made of the same material as ordered for the top.

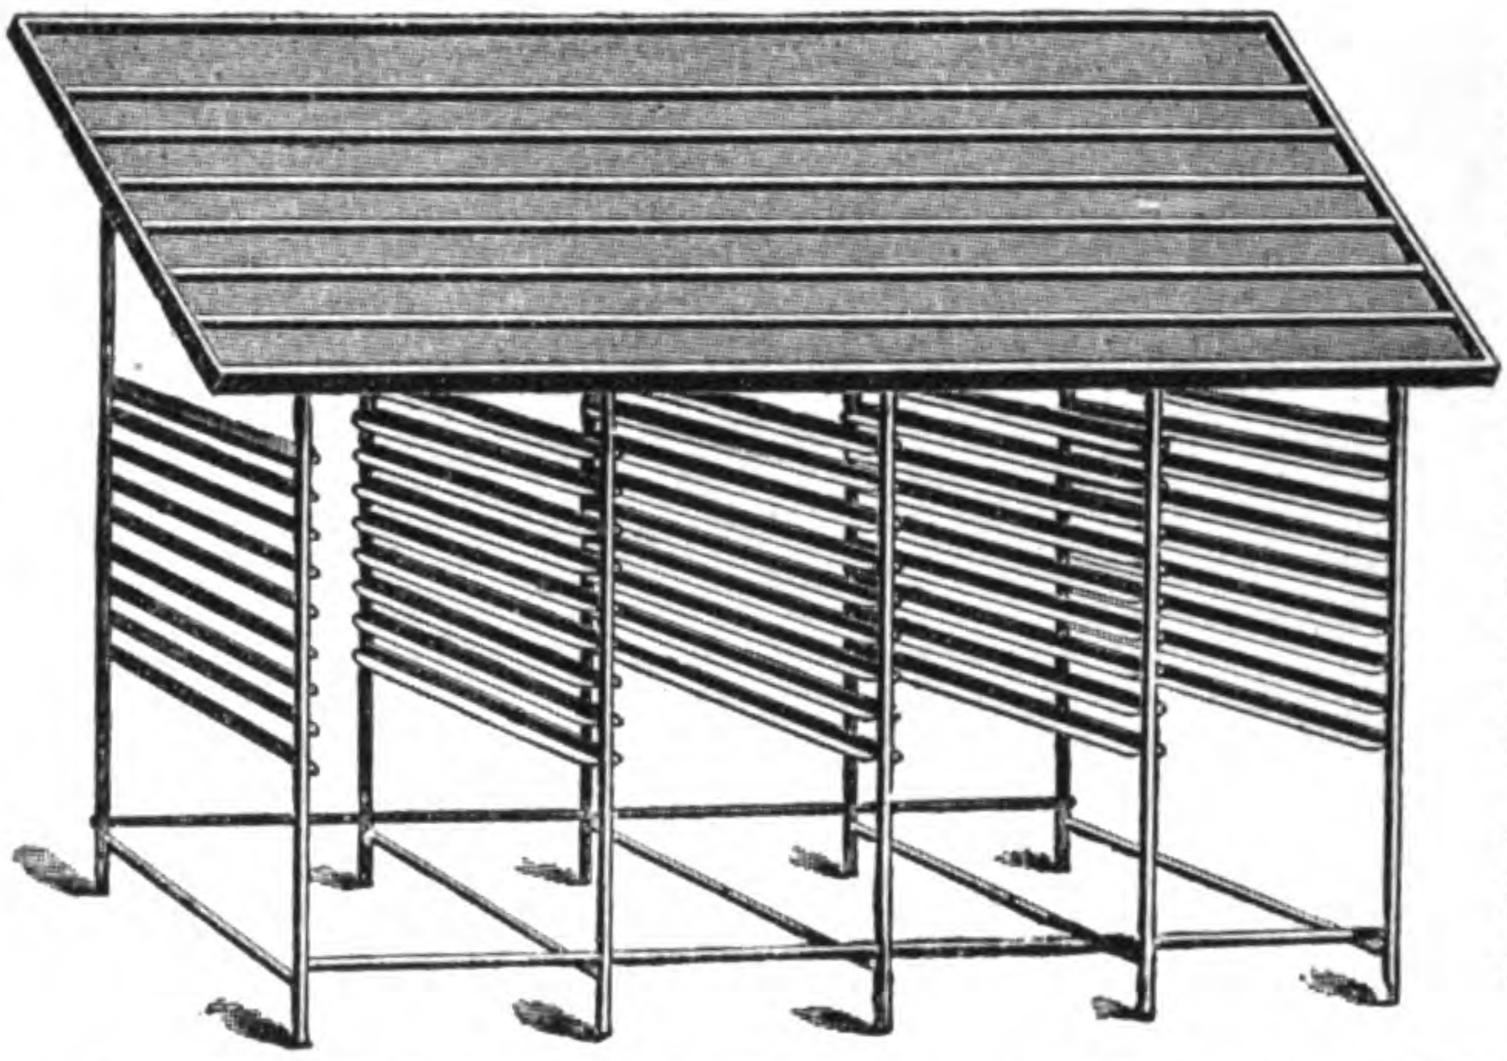
# WROUGHT IRON HORIZONTAL STANDING GALLEY.

**With All-Brass Top.**



The Wrought Iron Standing Galleys, with columns running horizontally (see cut), have iron racks and all-brass tops. The brass strips screwed on top are L-shaped, making the partitions only a little wider than column width, but leaving enough room for the fingers to lift the type, thus reducing the width of the top, making it more convenient to reach the upper rows. The columns are made to any desired length and width.

The cut on this page is an illustration of the No. 6 size, which is 12 feet long, with iron racks for 32 full-size cases.

# WROUGHT IRON LONGITUDINAL STANDING GALLEY.

**With All-Brass Top.**

Made entirely of brass and wrought iron. The top is covered with sheet brass, and screwed on the hard-wood top from underneath.

Standing Galleys with columns running longitudinally are designed for dead matter, and are almost indispensable. Uniform distribution is guaranteed, as the compositor is compelled to take the type from the top, and gets it into the cases regularly; consequently the type gets an even wear. The front is provided with a channel or gutter for the water used in wetting the type to run off into a receptacle. Any size made to order.

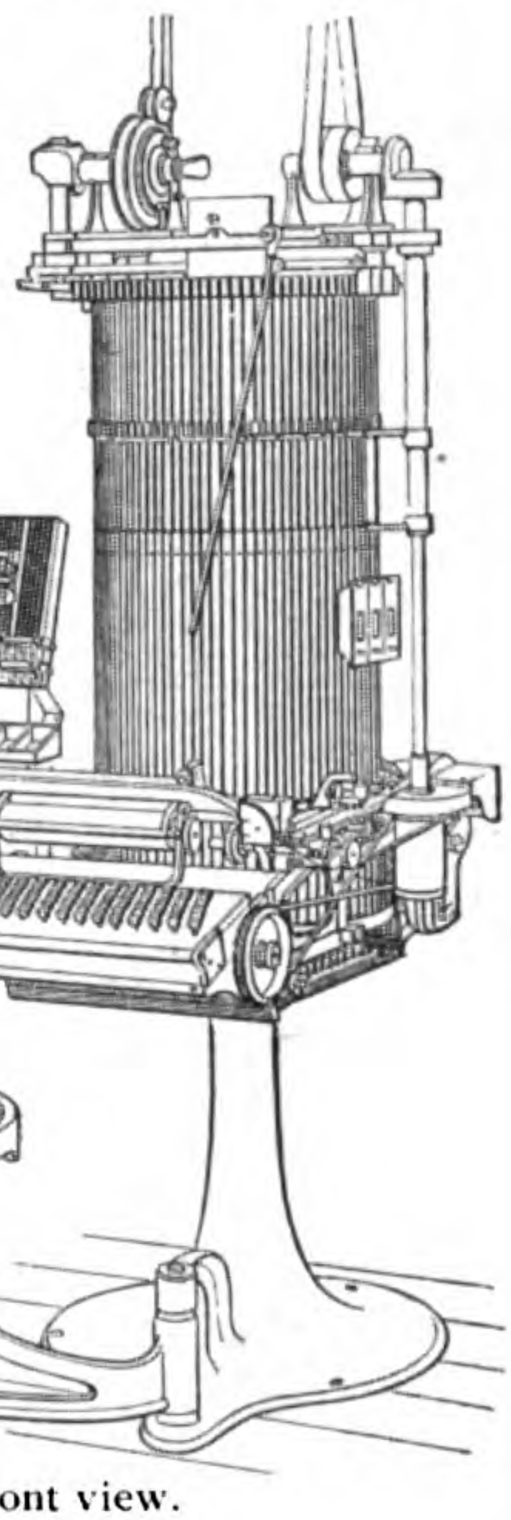
Price, per single column, 26 inches deep, in banks not less than 5 feet long . . . . **$3 50**

# THORNE TYPE-SETTING AND DISTRIBUTING MACHINE.

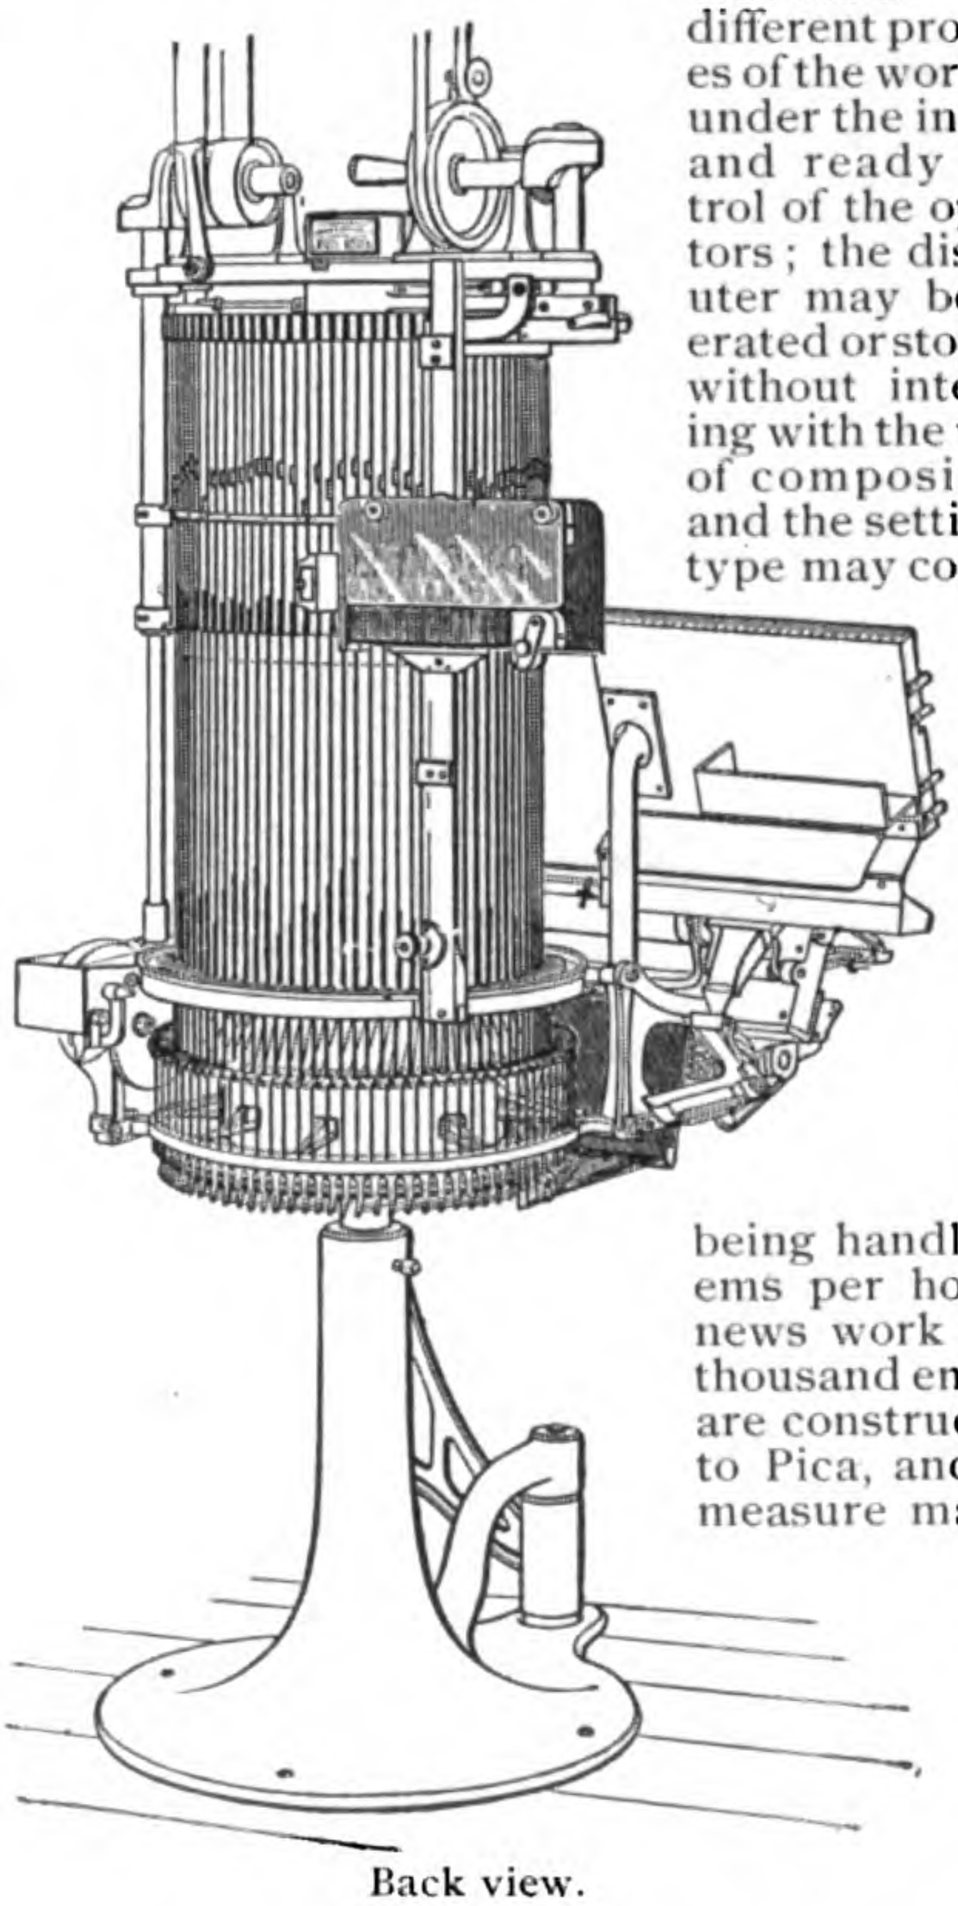
Type-setting machines, long regarded as an experiment, are now as much of a necessity in the average printing office as cylinder presses, and publishers or printers having any considerable amount of plain book or news composition cannot afford in these days of competition and hurry to rely upon slow, laborious and expensive hand composition, when this simple, reliable, and moderate-priced machine is available, which will produce the same work in a perfect manner in half the time and at less than half the expense of hand work.

The Thorne Type-Setting Machine, using perfect type, produces results typographically equal, if not superior, to the work of the hand compositor; so that not only are these machines now in successful use on news and periodical work, but they are likewise constantly employed in the production of books requiring composition of the most exacting character.



Front view.

The processes of distribution and composition are combined in a compact and simple machine of marvelous accuracy of construction, occupying but small floor space, and requiring little more power for its operation than a sewing machine. The different processes of the work are under the instant and ready control of the operators; the distributer may be operated or stopped without interfering with the work of composition, and the setting of type may continue so long as there is type for distribution. There being no time lost in distribution, composition may be carried on continuously should occasion require it, and it is a common practice to run machines with two sets of operators night and day.



Back view.

Proficiency in operating the machine is readily acquired after short practice by printers, and no machinist is required in attendance, for all working parts are made interchangeable. When a part becomes worn or damaged it can be replaced by any one of average mechanical ability. The capacity of the machine is limited only by the proficiency of the operator and the character of the work being handled. On book work from five to six thousand ems per hour are readily distributed and set, while on news work and work of similar nature from six to nine thousand ems are produced by expert operators. Machines are constructed to handle any one size of type from Agate to Pica, and for book work are so constructed that the measure may be changed in a minute's time. They are adaptable for use in any language, and machines are now employed by English, French, Finnish, Hebrew and German printers to set the type of newspapers, books and periodicals published in these languages. In the classes of work for which it is designed the machine will earn its cost within a few months.

## METALLIC TAPE COUPLERS.

This is a device for connecting ends of tape on presses and folding machines, so that there will be no wear at the joined parts, as is usual on sewed ends, which wear and cause the tape to run crooked and throw paper out of register. The Metallic Tape Coupler outlasts other methods of securing the ends of tape, and keeps the tape running true. It can be put on in a few seconds by means of Parallel Pliers made for that purpose.

EXPLANATION OF NUMBERS.

No. 1 gauges are 12 points high, with lip 1/16-inch long; No. 2, 15 points high, 1/16-inch lip; No. 3, 18 points high, 1/16-inch lip; No. 4, 12 points high, short lip; No. 5, 15 points high, 1/8-inch lip; No. 6, 12 points high, 1/4-inch lip. All gauges with tongues are 12 points high.

### GOLDEN STEEL GAUGE PIN.

### ORIGINAL STEEL GAUGE PIN.

### PERFECT REGISTER GAUGE PIN.

Pastes on like a quad, has a thin steel clip which strikes into tympan and prevents sheets from slipping under gauges, and is adjustable after pasting on.

### FLEXIBLE SIDE GAUGE PIN.

May be placed directly under gripper finger without injury to gauge or displacing it. The sheet is fed to the curved spring arm. Made of fine thin steel, with teeth underneath to prevent sheet from getting under gauge.

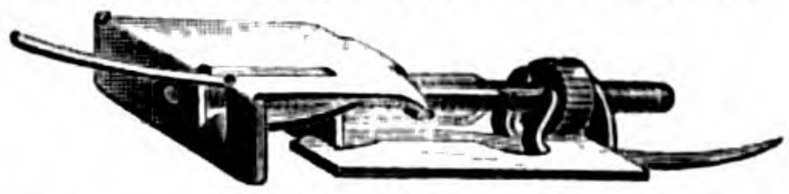
### CYLINDER SIDE GUIDE.

Secured to feed-board by the sharp point shown in outline in cut, which is placed at the side of pillar, so that hair adjustments may be got by simply turning the pillar to the desired position. The bendable brass tongue is adjustable in every direction.

### SPRING TONGUE GAUGE PIN.

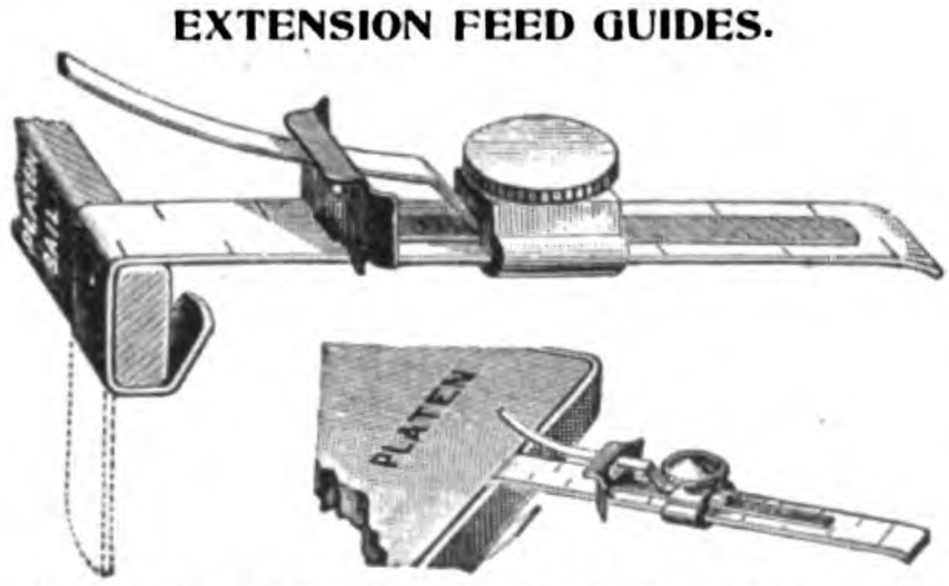
This is the most satisfactory gauge pin made. It meets almost every requirement of the pressman.

### SCREW ADJUSTING GAUGE PIN.



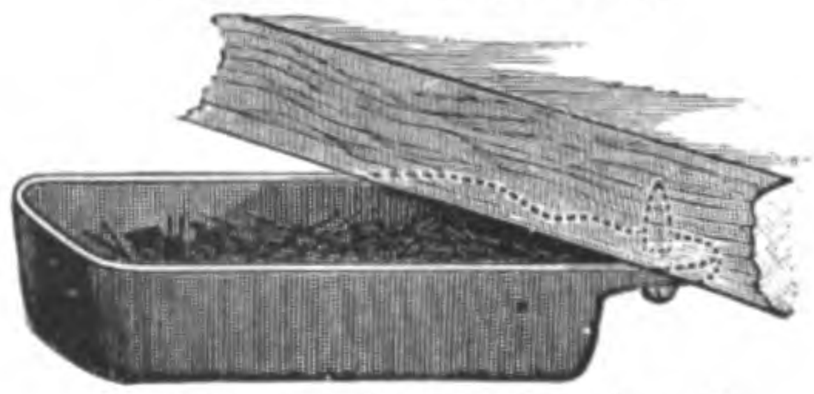
The prong should be inserted a quarter inch below the feeding line and forced snugly home. The base may be secured to the tympan with paste or glue if desired. The adjustment is got by means of the screw and nut with absolute precision and without weakening the hold of the pin to tympan.

### EXTENSION FEED GUIDES.



The cut shows the method of securing the guides between platen and platen bail, so that sheets may be fed below the lower edge of the platen.

### GAUGE PIN DRAWER.



Screws on under the feed-board.

## SUCCESS SAFETY BENZINE CAN.

**Made of Brass.**

By the use of this safety can, leakage of benzine or its vapor is prevented, as the stopper is automatically self-locking — always tightly closed when the can is not in use. The flow of benzine, naphtha or any other fluid is regulated by the pressure of the second and third fingers upon a circular plate on the nozzle; and the adjustment is so perfect that one can pour a single drop, or a full stream, at will. It is also neat and cleanly, for the hands are kept entirely free from contact with its contents. The patent improved stopper is as durable as it is simple. Made of the best material, and carefully finished and adjusted.

As a safeguard against loss by fire, this can is an economical and profitable "policy." Benzine is dangerous, but its use is divested of risk where this improved can is employed. It has been put to the test, and proved safe and serviceable in every respect. It may be overturned or placed in any position whatever, and the contents will not spill or overflow. There are no chains or exposed springs.

Approved by the Board of Fire Underwriters.

| Quart can | $0 75 |
| Gallon can | 2 00 |

## UNION STORAGE CAN.

**For Holding Benzine or Oils.**

It is strongly made of galvanized iron and is self-closing. There can be no evaporation, and no fluid can be spilled until the nozzle is opened by means of the spring. A very necessary article in all printing offices which are permitted to have one or more gallons of benzine on the premises.

Quite a saving in the cost of benzine and oils will be realized by purchasing in the quantities held by these storage cans, besides avoiding the inconvenience of sending out at frequent intervals to get the ordinary benzine can filled up.

## UNION SAFE BENZINE CAN.

This is patterned after the original benzine can, with the addition of a circular plate around the head, near the vent, by means of which the valve is opened without wetting the fingers. When pressure is removed it closes automatically. The head is attached to the can with a chain, so that it cannot be lost when unscrewed for the purpose of filling with benzine.

Made of tin.
Enameled red.

**Holds one quart, each** . . . . . $0 75

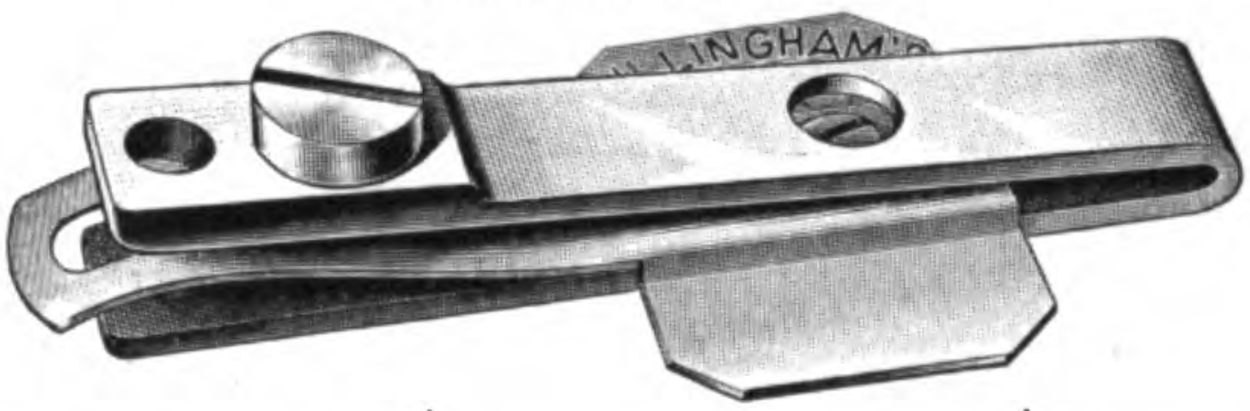
## PRESS POINTS.

For inserting in wood furniture when sheets are printed for folding machine. Points are screwed into wood with wrench as far as the cross pin will allow, when they will be found to be correct height.

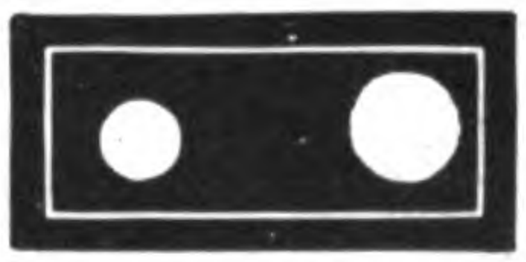
Points, per dozen . . . . . $0 75 | Wrench . . . . . $0 75

## DILLINGHAM PRESS PUNCH.

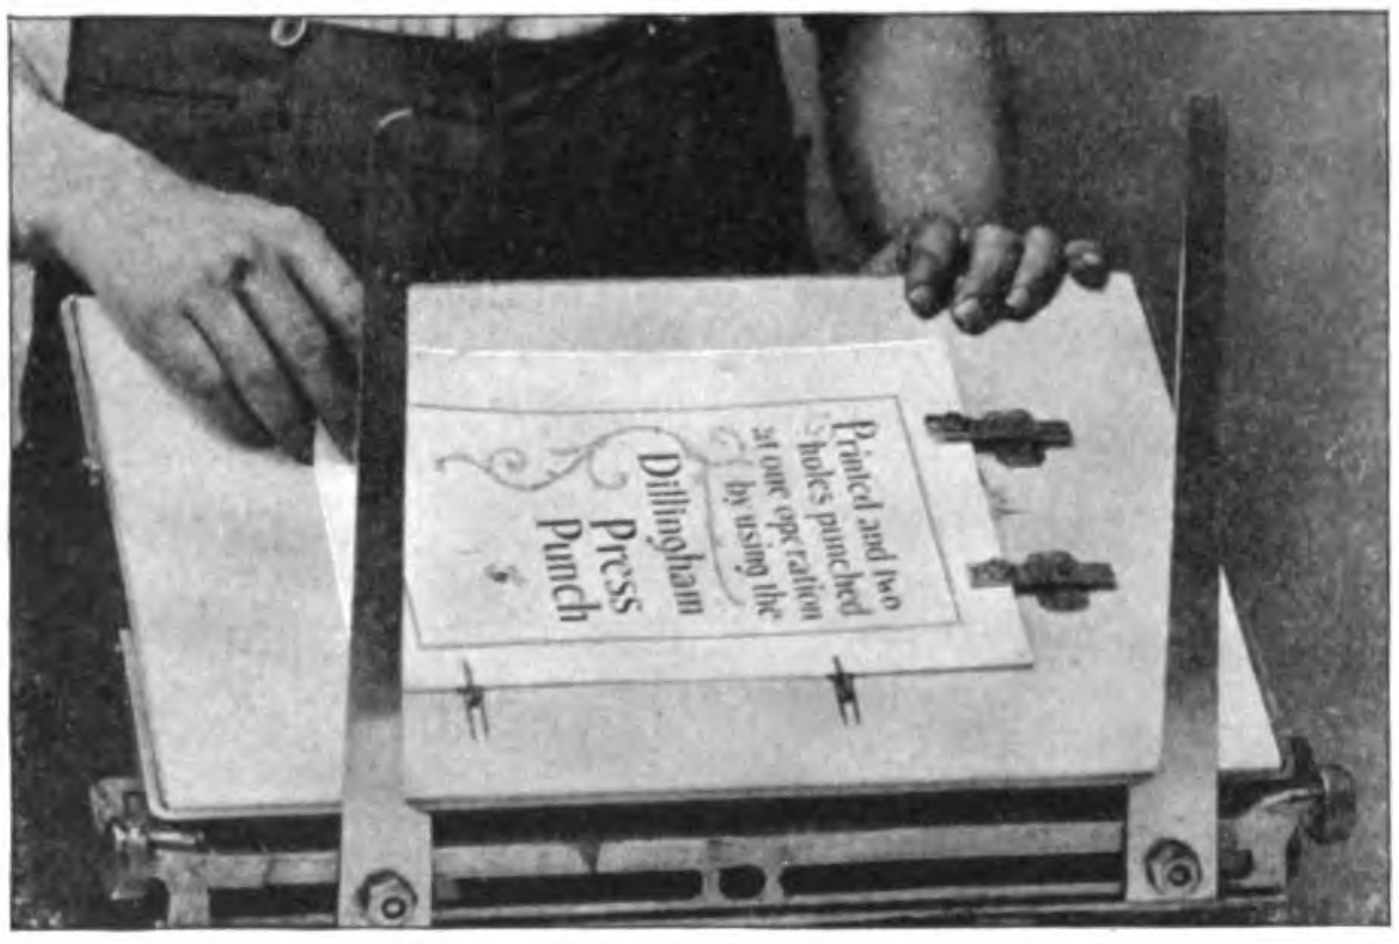
Patented March 2, 1897.



Is secured to the tympan of platen presses in same manner as a feed guide, and punches a clean hole in card or paper simultaneously with the printing on jobs which have a margin of one inch or more. The method of working this punch is clearly shown in accompanying half-tone. The slightly curved spring is placed under the upper tympan sheet, and the sheet to be punched is fed over this curved spring and under the punch with no more trouble than in feeding to gauge pins. The punch is secured to the



tympan by paste or glue or (better still) by a mixture of paste and glue. Two or more punches can be used on one sheet. Punching and printing can be done simultaneously on a variety of work, such as window cards, programmes, orders of dance, souvenirs, etc. Made with large and small holes, as per diagram. The larger hole will be sent unless otherwise ordered.



Each, with directions, net . . . . . $1 25

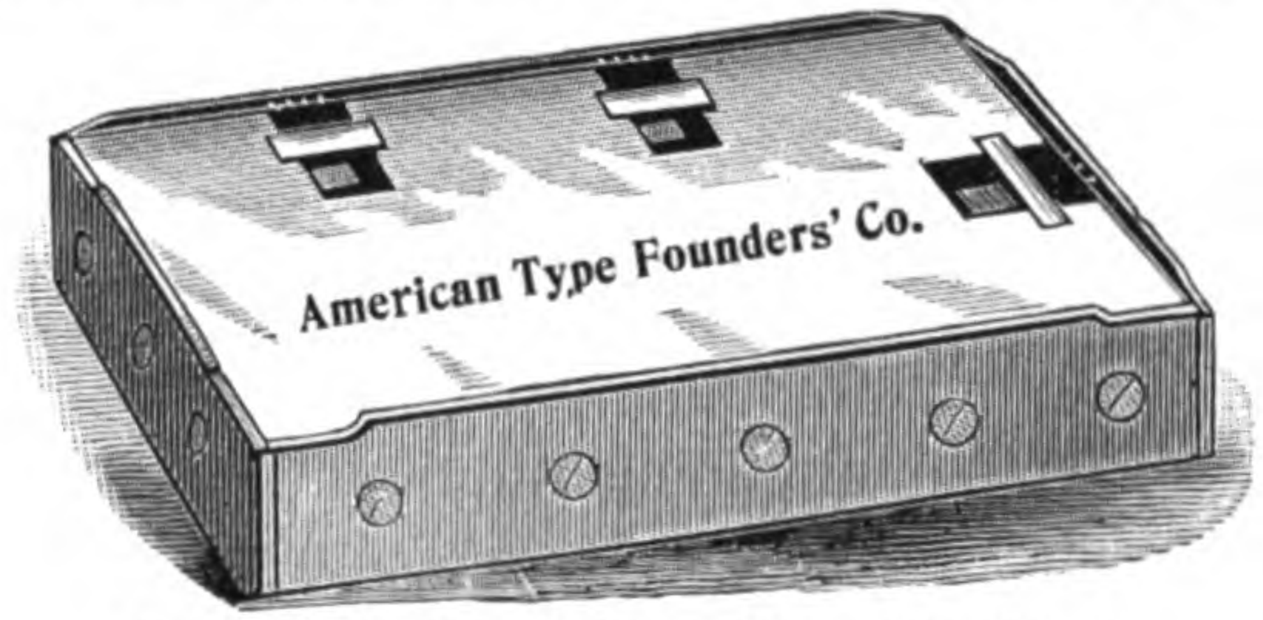
## PRESS PUNCH.

This punch is about one thirty-second inch lower than type, and can be locked up in a type form, thus enabling printers to punch holes in stock at the same time it is printed, without extra expense. A piece of 2-point brass rule should be cemented to the tympan sheet for the punch to strike on, and an opening left in the form opposite opening in base of punch to prevent it from becoming clogged. Made of best tool steel, tempered.

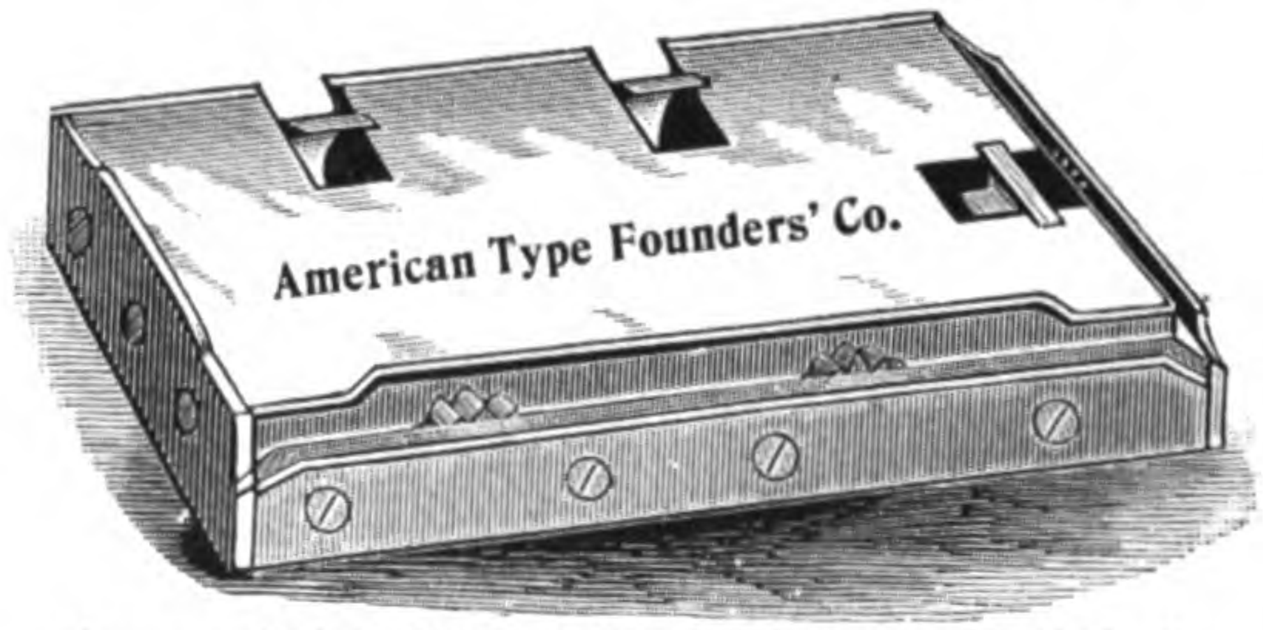
For ⅛, 3/16, or ¼ inch hole, each . . . . . $1 00

# MAHOGANY AND IRON STEREOTYPE BLOCKS.

Mahogany Blocks are made of the best San Domingo mahogany, thoroughly seasoned, and are first-class in every detail. All blocks are made to order at short notice.



New Style Block, with Patent Side and End Hooks.



Improved Plain Old Style Block, with Patent End Hook.

## IMPORTANT POINTS.

Do not order a set of blocks, nor make up a form of patent blocks for press, until you know the exact size of chase that must hold the blocks, and the thickness and position of its cross-bars. Ascertain also the exact size of paper for which the blocks are intended, and whether the leaves of paper, after printing, are to be cut or uncut, and to be sewed or stitched. In making up blocks, if paper is to be uncut and sewed, allow nothing for loss by waste on the fore edge; if it is to be side-stitched and trimmed, make suitable allowance for margin that will be concealed by wire stitching in binding.

**CAUTION—To Avoid Errors.** In sending orders, give the size of each block outside, and also the size of largest and smallest plate to be worked, *measuring the back of the plate;* or add ¾ of an inch to the printing matter, as follows, viz.: If the matter is 3 × 5, the blocks should be 3¾ × 5¾ outside, the bevel on the plate being about ⅛. The hook and pinion will take ⅝ with a little allowance for taking the plate free. All blocks are made ¾-inch thick, unless otherwise ordered.

## WITHOUT END HOOKS, FOR PLATEN PRESSES.

To get the price of blocks with head brass, but no end hook, take the price of the next largest size in Price List. Add 50 cents each for extra hooks and pinions inserted in blocks.

# WETTER NUMBERING MACHINES.

## THE BETTER WETTER.

The latest successful development in Numbering Machines, for use with or without type on printing presses. This is the only typographic numberer that prints nothing but the figures, without "No.," a period, or any other affix or suffix intended to act as plungers or to prevent the printed sheet from being smeared by the revolving figures. The pressure of the platen or cylinder on the figures operates the mechanism which changes the numbers and also an ingenious bearer, which raises automatically and holds the printed sheet off the figures while they are changing. This bearer does not print on or indent the paper.

The Better Wetter is made with that perfection in construction and materials which have made all "Wetter" Machines famous.

The Better Wetter.

This is the smallest machine of its kind, being ⅞-inch wide, the length depending upon the number and thickness of figures required. *Type can be set close up to the machine on all sides.*

Four regular styles of figures made. Styles **J** and **K** kept in stock. Styles **L** and **M** furnished at short notice.

**Style J** 1234567890 **Style K** 1234567890

*These Styles used on both the Better Wetter and No. 1 Wetter.*

**Style L** 1234567890 **Style M** 1234567890

No. 1, actual size, Style J.

## No. 1 WETTER NUMBERING MACHINE.

This is the regular machine, of which thousands are in use all over the world. Permits printing and numbering at one impression. Can be used on any make of press. Numbers automatically from the unit to its full numerical capacity. It can be used with or *without* the character "No." Other characters, such as a star, parenthesis, fist, cipher, or any letter, can be used to either precede or follow the figures. Produces clean, smooth and distinct figures. Styles of figures **J** and **K** are most used, and are kept in stock, but Styles **L** and **M** can be furnished upon short notice.

The 5-wheel style **J** machine occupies a surface space of ⅞-inch in width by 1¼ inches in length.

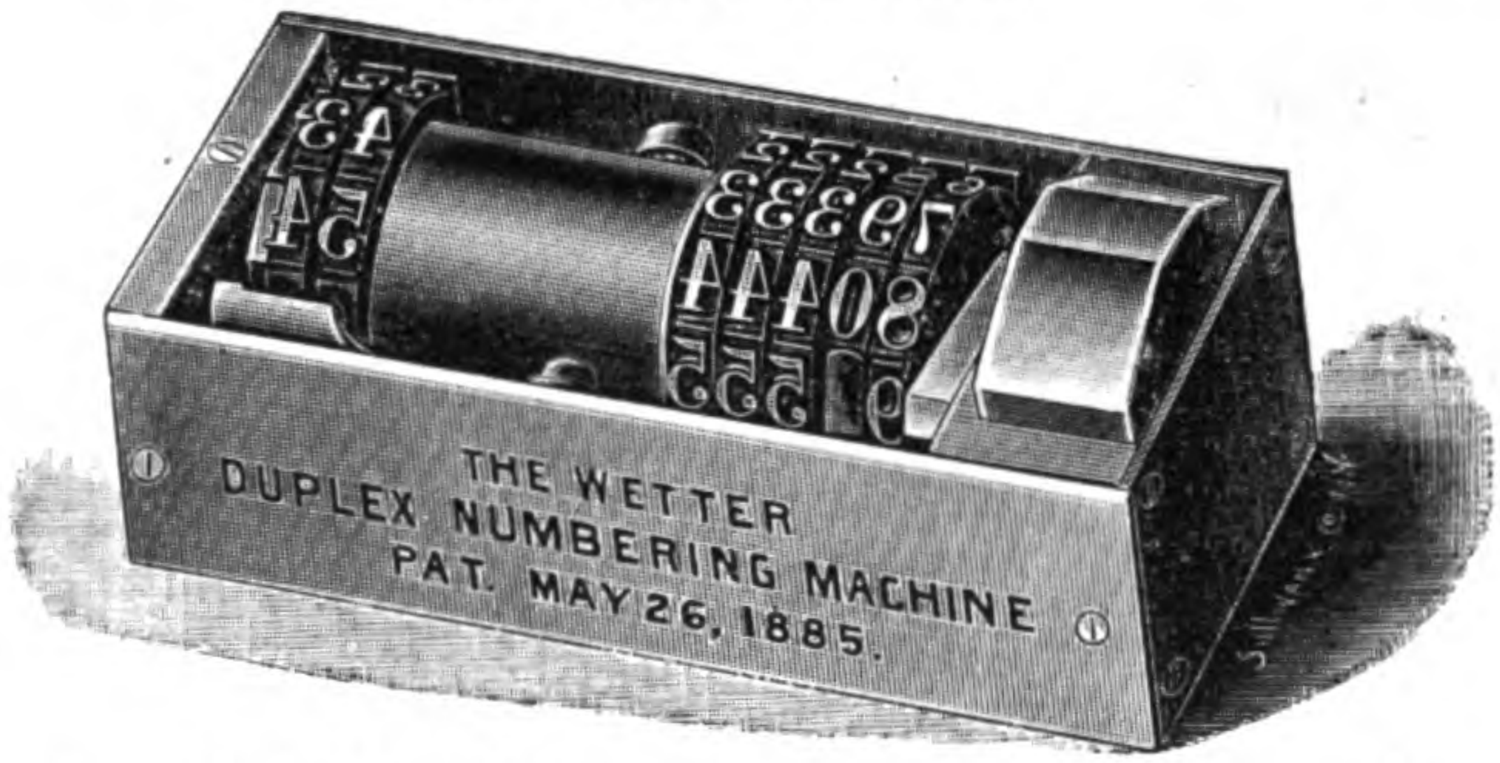
## No. 4. WETTER MACHINE FOR NUMBERING CASH SALE SLIPS.

(*See illustration on opposite page.*)

Made to number automatically from 100 to 1, or 50 to 1. Object of numbers running backward is to avoid expense of collating sheets after printing. Can be made to number forward. After printing to 100 or 50 they commence again at 1. Plunger wheel can be made with a letter wheel to print A, B, C, D, E, F, G and H, or letter slides may be used in plunger, and any of these letters or the character "No." can be used at will by turning the wheel until the desired letter is on top.

Price, 3-wheel, with letter wheel . . . . . $25 00

## No. 5. WETTER DUPLEX MACHINE FOR NUMBERING DUPLEX RAILROAD TICKETS.



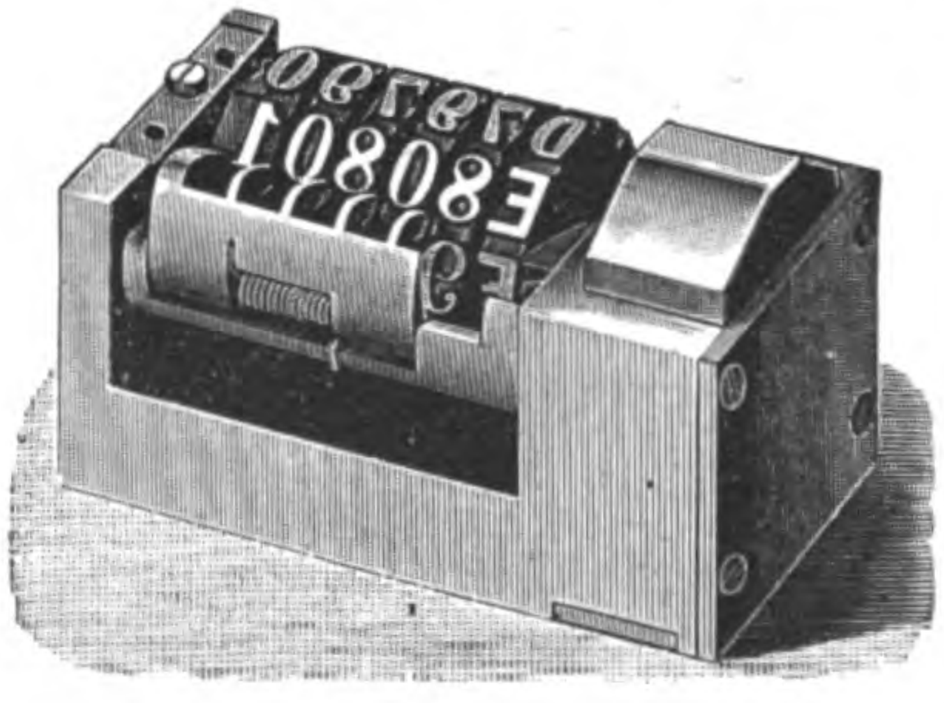
Numbers tickets on both sides and also on stub at one impression. Ticket numbers generally run from 1 to 100 or 0 to 99, and changes consecutively the book number which runs from 1 to 9999 or 1 to 99999. Can be arranged to change once at every one hundred impressions of ticket number, or can be made stationary, so that changes can be made by hand. There are three machines to a set—one for stub and one for each side of the ticket, to be used in same manner as ordinary Wetter Numberer, needing no attachment of any kind.

Set of three machines, net . . . . . $120 00

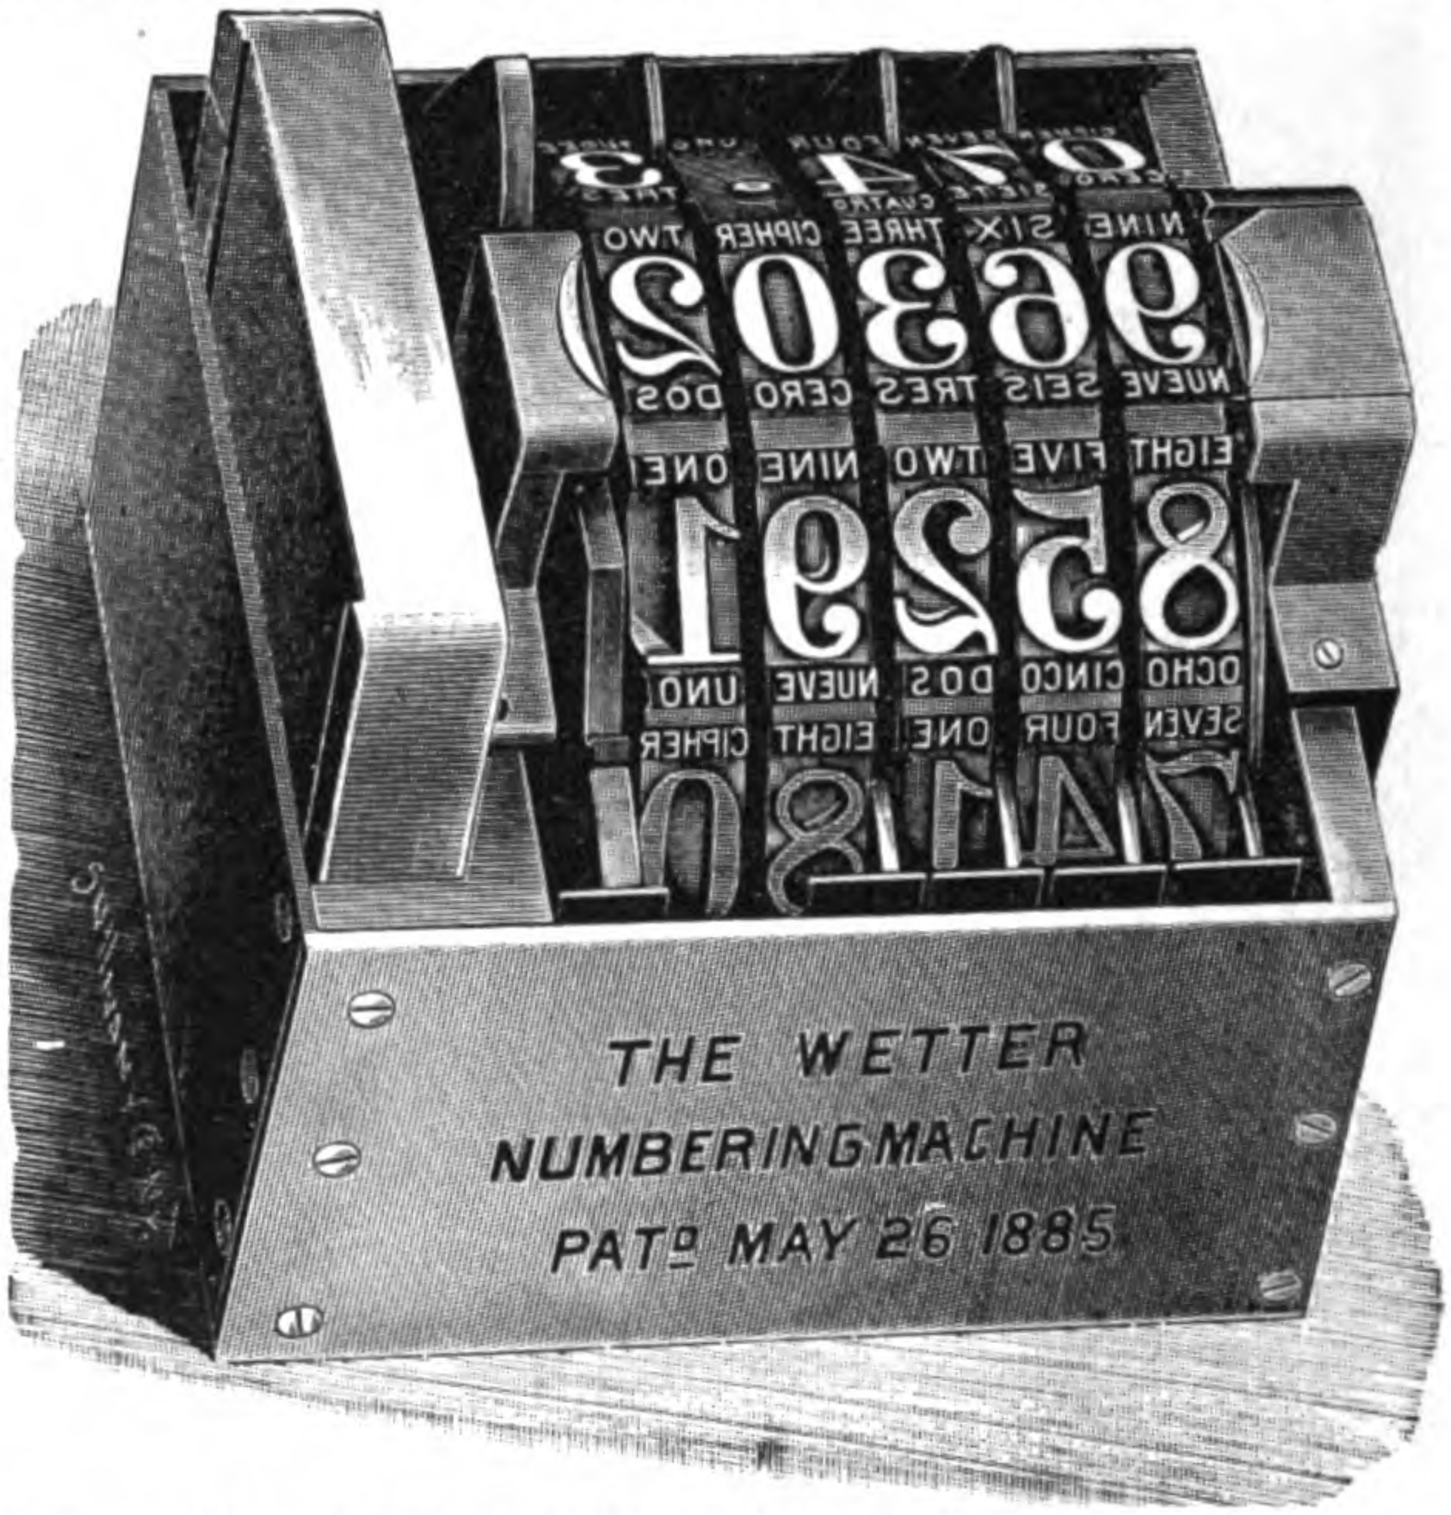
## No. 7. WETTER MACHINE FOR NUMBERING BOND COUPONS.

Numbers with or without serial attachment. ⅞-inch wide, and can be used on narrowest bond coupons. Letter wheel can be placed on end to indicate serial No. A, B, C, D, E, F, G, H, I or J; or the serial letter or character "No." can be placed close to figure, thus—A1.

Price, 5-wheel . . . . . $25 00
Price, 6-wheel . . . . . 28 00
Price, 7-wheel . . . . . 31 00



## No. 8. WETTER MACHINE FOR NUMBERING LOTTERY TICKETS.



These are considerably more than type high, and the printing-press bed must be sunk or cut out so it will take in a thickness of two inches. We can supply presses for this purpose. Denominations of the figures can be spelled out under and over the figures in any language. Parenthesis marks can be placed at each side of a figure, thus—(1) to (9). At changing to 10 the parenthesis is moved back one step, and may be changed to include all figures until the full number (99999) is printed. Prices on application. Send full details and samples of work required. We show example of the figures used.

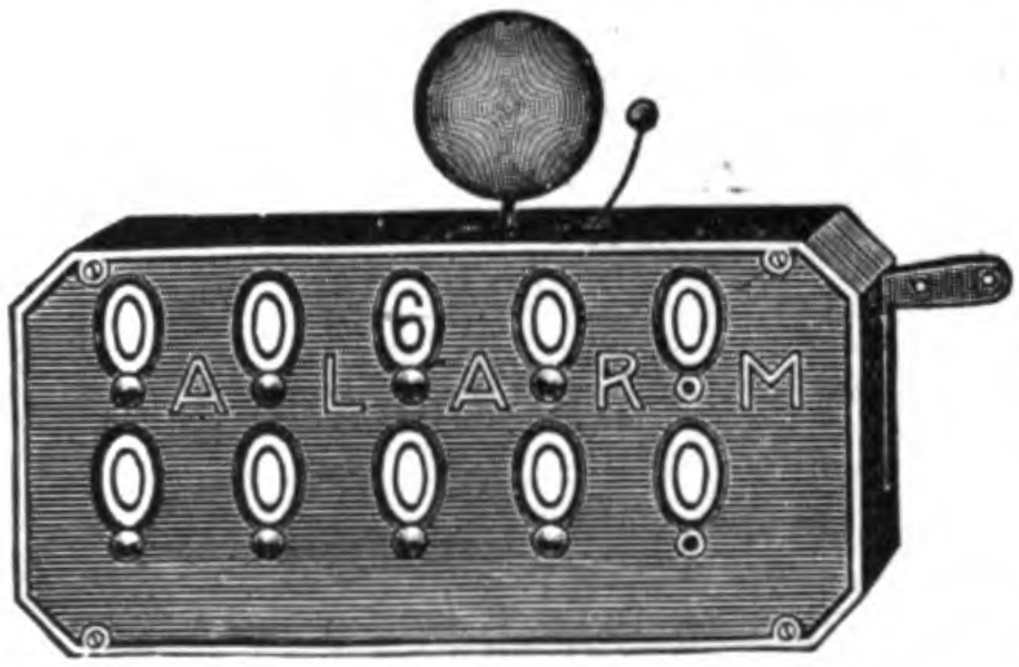
| No. 2A, 5-dial, with 4-inch gong, to give alarm at each 100 | . . . . . | 15 00 |

## DOUBLE DIAL ALARM COUNTER.



This counter is so constructed that the lower dials show the number run like the usual counter. The upper dials are the alarm device, and can be set (instantly without taking from the case, by thumb-screw or key) to any desired number you wish to print, and when that number is printed the bell will ring. To illustrate: Set the alarm on 600, if that is the number you wish to run, with lower dials on ciphers. First revolution of the machine the lower dials will show 1, and the upper dials 599 or one less, and so on until 600 is run, when the upper dials will stand at (000) ciphers and the bell will ring. Any time you look at the counter it will show how many yet to run. Perfectly simple in construction. No more springs are used than in an ordinary counter, and all are made of best piano wire. This counter has an iron case, and very legible figures.

No. 1. Double Dial Alarm, 5×8, ½-inch figures, registering 100,000 . . . . . $15 00

## AMERICAN COUNTING MACHINE.

Has no superior for strength, accuracy, reliability. Can be set to zero, or any number, with the fingers with the greatest ease. There are no springs inside this counter, and all movements of the figure-dials are so positive that it is impossible for them to miss registering. The case may be screwed to the wall or on a table, and the lever can be set to any position, and will work from front or back. The figures are cast solid, nickel-plated, and are very legible.

# CHESAPEAKE ECONOMY COMPOUND.

**The Effective Ink Reducer for both Lithographic and Letter-press Inks.**

**IT IS PURE.** — Chesapeake Economy Compound is absolutely free from mineral petroleum products or acids of any kind, and is perfectly safe. Varnishes may be added, if required.

**IT HELPS INKS.**—Any kind or color of ink mixed with Chesapeake Economy Compound will not dry on forms or rollers, and will not skin when exposed to the air. Upon being mixed with ink, Economy Compound becomes thoroughly identified with it, and with less weight of ink a solid, sharp print is obtained. Inks mixed with Economy Compound will cover 30 per cent. more paper than if used without it.

**IT PREVENTS TROUBLE.**—Coated and surface papers will not pull if printed with ink mixed with Economy Compound, and the use of the Compound tends to prevent off-set and to make inks dry quicker on paper. It is not necessary, as a rule, to wash up rollers at night when inks are mixed with Economy Compound, as the inks will not dry on rollers. Economy Compound keeps lithographic stones in good condition, and inks mixed with it lift well from the stone.

## A FEW OPINIONS.

*The Pioneer Press Co., St. Paul, Minn.:* "Ship us 50 pounds Economy Compound, same as furnished heretofore."

*P. F. Pettibone & Co., Chicago:* "We have been using Economy Compound in our press room for some months, and find it a very fine article indeed."

*John A. Lowell & Co., Boston:* "We find Economy Compound most excellent for printing heavy black forms on enameled or coated stock, enabling us to turn out the work quickly and without offsetting."

*Oxford Publishing House, Baltimore, Md.:* "Economy Compound is doing more than is claimed for it. We get full 30 per cent. more from our inks and a much better result in the way of solid color than we did before using it, and the fact that long runs can be left over night ready to start in the morning without washing up is a great saving of both time and ink, especially on hurried work. We have used it for six months and would not be without it."

*G. H. Dunston, Buffalo, N. Y.:* "Economy Compound is the best reducer we have ever used, especially in cases where ink has hardened. This formerly caused us trouble and loss, as it was frequently necessary to throw away such ink; but with this reducer we can put the ink in proper condition for use."

*Matthews-Northrup Co., Buffalo, N. Y.:* "As good a reducer as we have ever used."

*Magee Printing House, Philadelphia:* "It does everything claimed for it. We are very much pleased with it."

# INKOLEUM.

A liquid preparation of world-wide fame for reducing and refining printing inks without impairing the color. It makes intractable inks work smoothly on discs, cylinders and rollers, and, mixed with caked inks, makes them useful again. Handy to have in the press room, as it is invaluable in cases of emergency.

## EUREKA TYPE WASH.

The most effective powder preparation for removing ink from type rollers and plates. Does not injure brushes, corrode type, nor hurt the hands. Directions on every package. While its action is gentle, it is quite as effective for cleaning as the most powerful lye. One pound of powder will make eight gallons of washing fluid.

## ADAMSON DISC COVER.

We have sold some hundreds of these useful Disc Covers and none have been returned. Recommended as savers of ink and time, and approved by all purchasers.

**Makes Copying Inks Work Easy.**

Cold iron and copying inks repel each other. To avoid trouble, slip an Adamson Disc Cover over your disc. It is made of special cloth, lined with rubber. Iron dries the ink, deadens it, wastes it. The cloth disc gives good distribution, becomes saturated with ink like a stamp pad, and saves 50 per cent. of ink. When job is done, lift off disc cover. Saves washing time, and all the ink in cover is available the next time you use it. In ordering send the exact size of ink disc.

☞ Owing to the limited space between edge of disc and chase-latch, these discs cannot be used on Golding Jobber and Pearl Presses.

## HERCULES LIQUID OVERLAY.

A substitute for paper overlays, giving a finer, quicker make-ready, and saving lots of time and tedious work. It is put on thinly with a camel's-hair brush, and the first application should be allowed to dry before putting on another, if the first is not heavy enough. It dries very quickly. If the Liquid Overlay is put on too thickly, the overlay is reduced by scraping it with fine emery cloth.

Each pressman should have an independent supply in a small phial suitable for carrying in the vest pocket.

## BURBANK'S EMBOSSING COMPOSITION.

This is an approved and satisfactory liquid chemical preparation for making counter dies for embossing, which, after exposure for a few minutes to light and air, hardens into a stone-like substance, making a perfect counterpart.

Specially adapted for making counter dies for Hand and Power Embossing Presses listed in this Price List.

It is easily applied, according to directions printed on every can, and greatly simplifies and cheapens the process of embossing.

## "BENTROVATO."

[TRADE MARK.]

**Dispels Electricity from Paper on Printing Presses.**

A chemical fluid preparation which, applied in a small quantity to the tympan sheet by means of a sponge, cloth or cotton waste. effectually dispels the electricity generated in cylinder presses—a difficulty which results in serious losses to printers.

In all offices where there is a tendency toward this trouble, a bottle of "Bentrovato" will prove as valuable as the proverbial "stitch in time."

"Bentrovato" is used in a majority of the larger printing offices throughout the United States.

*American Type Founders' Co.:* Please send me at once by American Express one bottle of "Bentrovato." I should not like to be without it, even if it cost $10 per bottle. Our devil knocked over the first bottle you sent us. I bought it with no faith, simply because I was willing to try anything. Our paper was as if possessed by ten thousand devils. The trouble ended at once and completely with the use of the "Bentrovato."—WALTER B. SHEPPARD, publisher of the Pan Yan *Democrat* (founded in 1818).

## MOVABLE DRYING RACKS.

The frames of both these racks are of hard wood, bolted together, and mounted on strong casters, so that they can be easily moved when loaded. The shelves of the Chicago Rack are framed all around with hard wood, while those of the New York Rack are framed on ends only.

No. 1 New York Drying Rack.

|---|---|
| No. 1, 20 shelves, each 24×36 in. . . $14 00 | No. 3, 20 shelves, each 28×42 in. . . $20 00 |
| No. 2, 30 shelves, each 24×36 in. . . 20 00 | No. 4, 30 shelves, each 28×42 in. . . 28 00 |

The No. 1 rack (the cheapest) gives a drying area of one hundred and twenty square feet, while actually using only six square feet of your costly floor space.

## CHICAGO DRYING RACKS.

No. 5, 12 shelves, each 2×2 feet . . $14 00 | No. 6, 10 shelves, each 2×3 feet . . $18 00

No. 7, 10 shelves, each 2½×4 feet . . $23 00

This rack is the most substantial movable drying rack made. Although it has fewer shelves than a New York, the extra space between the shelves is a distinct advantage, as on small jobs the sheets can be handled without moving the shelf on which they are placed. When not in use the shelves may be put out of the way, as illustrated in cut.

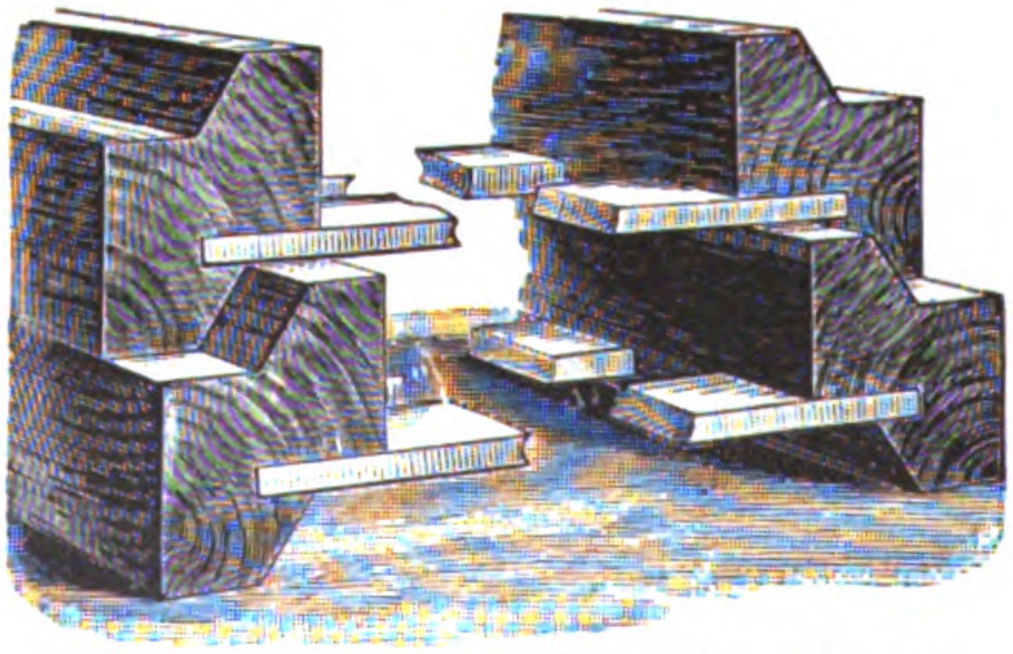

Figure 2. End View of Interlocking Device.

## BEST RACKS FOR LARGE EDITIONS.

On opposite page we describe a patented rack which has saved large firms thousands of dollars per year by enabling them to utilize their floor space to the utmost extent, making slip-sheeting unnecessary on very many jobs and preventing wastage by handling sheets. The interlocking device and method of inserting the slats into the sides is very plainly illustrated in Figure 2. No large establishment can afford to use wall-racks now that these effective racks, used in connection with trucks, will save their cost every month in the year.

# KŒRNER'S PATENT INTERLOCKING DRYING RACKS.

(United States Patent, No. 392,735; Canadian Patent, No. 28,739.)

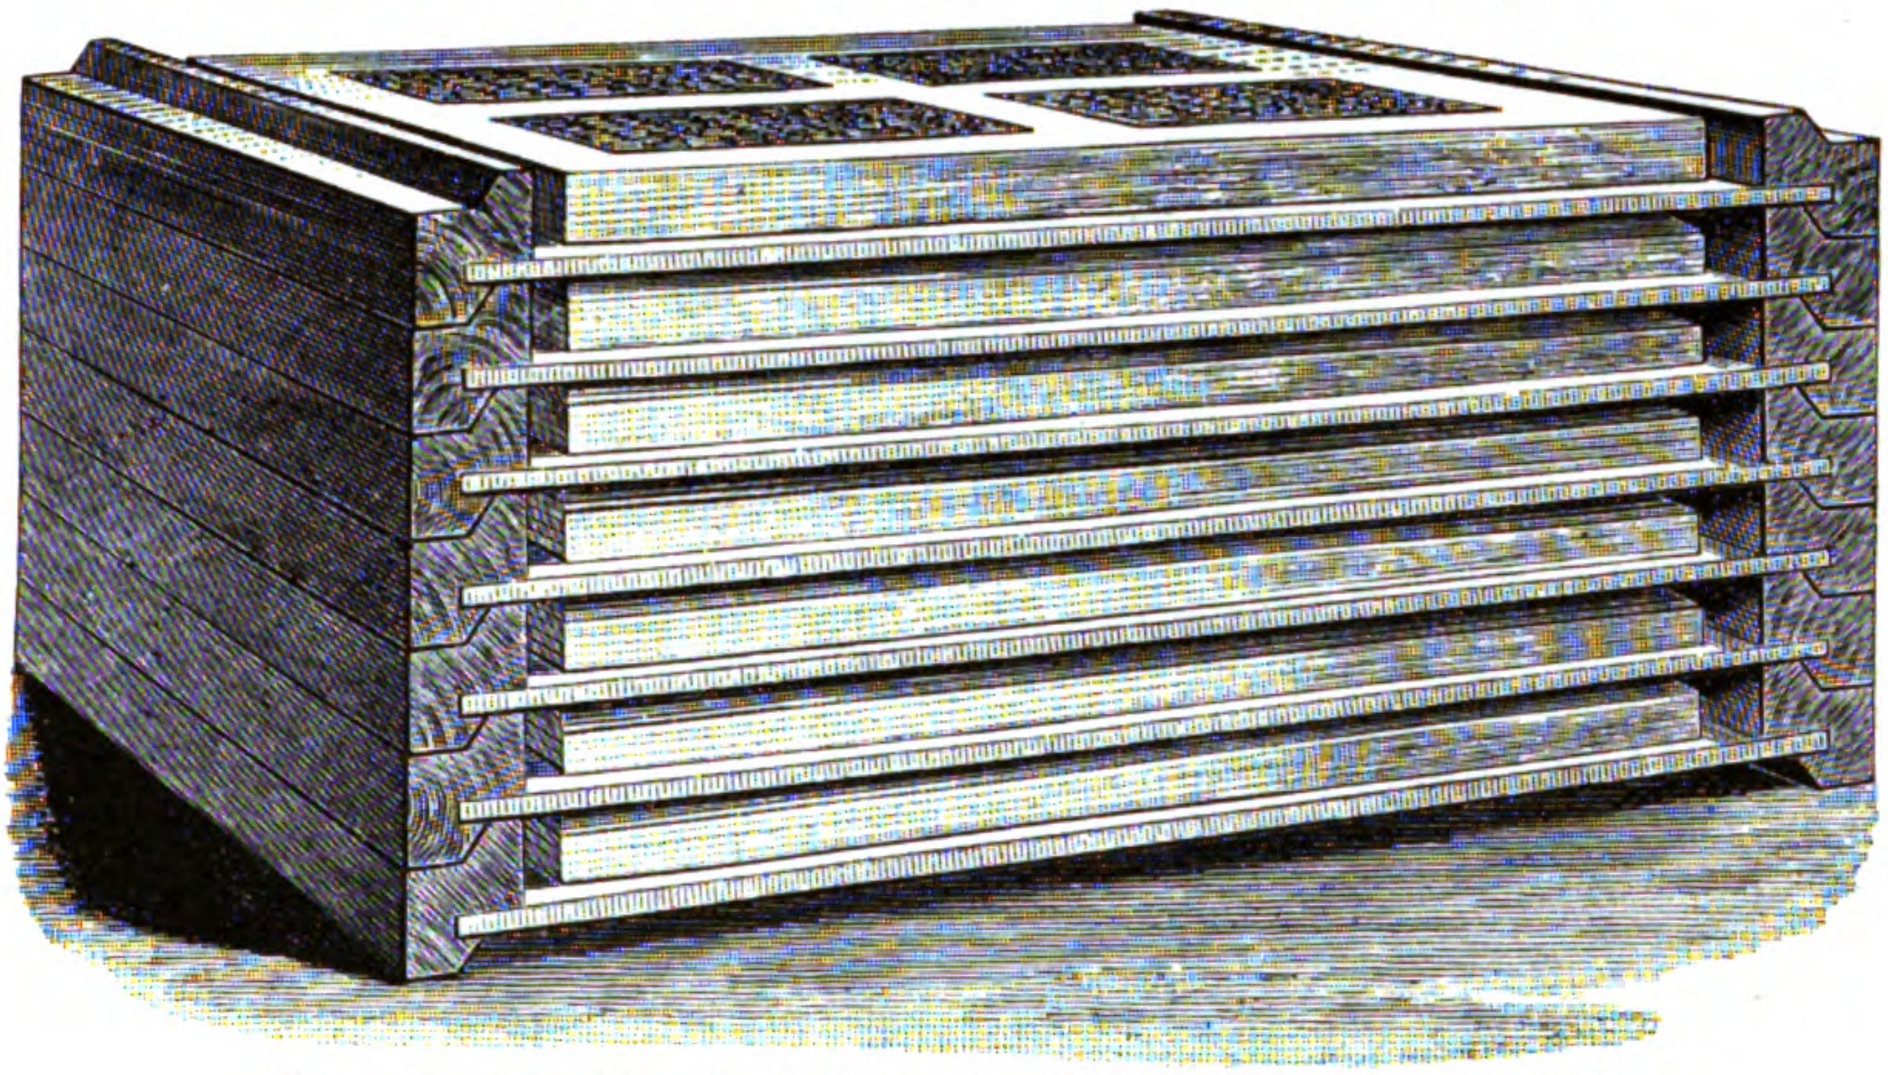

Fig. 2. Interlocking Racks Stacked with Paper, Straight and Rigid.

These racks are for establishments which work on long runs, for color work, and for lithographers. They are used on *Puck* and *Truth*, and the American Lithographing Company has over 25,000 of them in its various establishments in New York City alone.

With these racks sheets are taken direct from the fly of the press, and may be stacked ceiling-high in a perfectly straight and rigid pile, which cannot be knocked over by accident, and with no more weight on the bottom than on the top sheets. This pile is a most effective drying room, occupying only the floor space of one rack, and from the time the sheets are fed into the machine until ready for shipment they need not be handled. The interlocking device, which makes the pile straight and rigid, is shown in Figure 2. Each rack is firmly locked on its neighbor, but each slides with ease on the rack immediately below it. They save handling, all the time of that operation, and the consequent waste of paper through offset, smearing, finger-marks and tearing. In many cases these racks save expensive slip-sheeting. They circumvent electricity by receiving the sheet direct from the fly. They insure evenness of temperature, and thereby assist in getting a perfect register on lithographic work. They save seventy-five per cent. of floor space over any other method of drying sheets, and from one to two per cent. of paper, and a vast amount of time. A further saving of time may be effected by placing the racks as they come from the fly-board on a printer's truck, made specially to take these racks (see next page). A pile of racks can be moved quicker, safer and easier on the truck than a single armful can be moved by hand. The racks have hard-wood sides with wide soft-wood slats, and are very strongly put together.

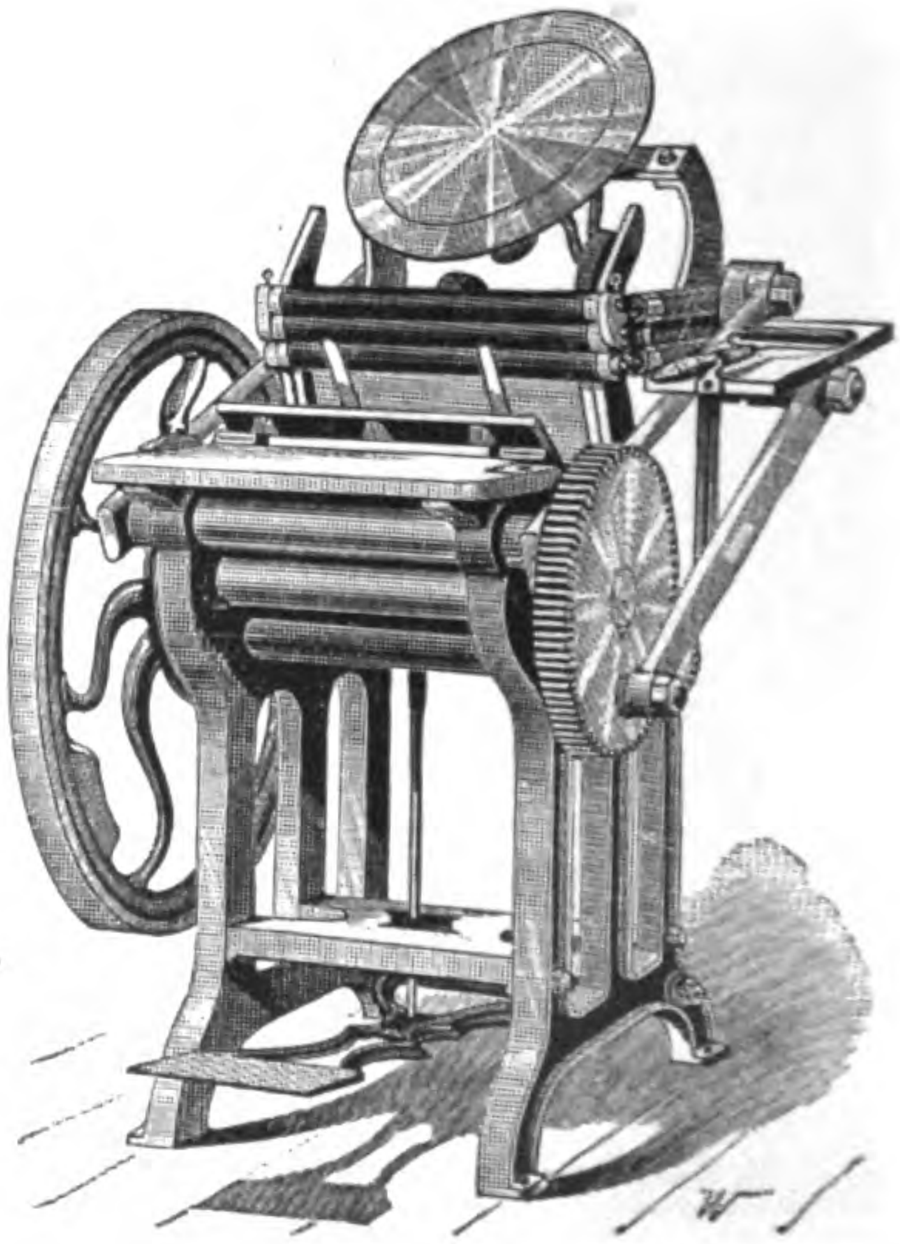
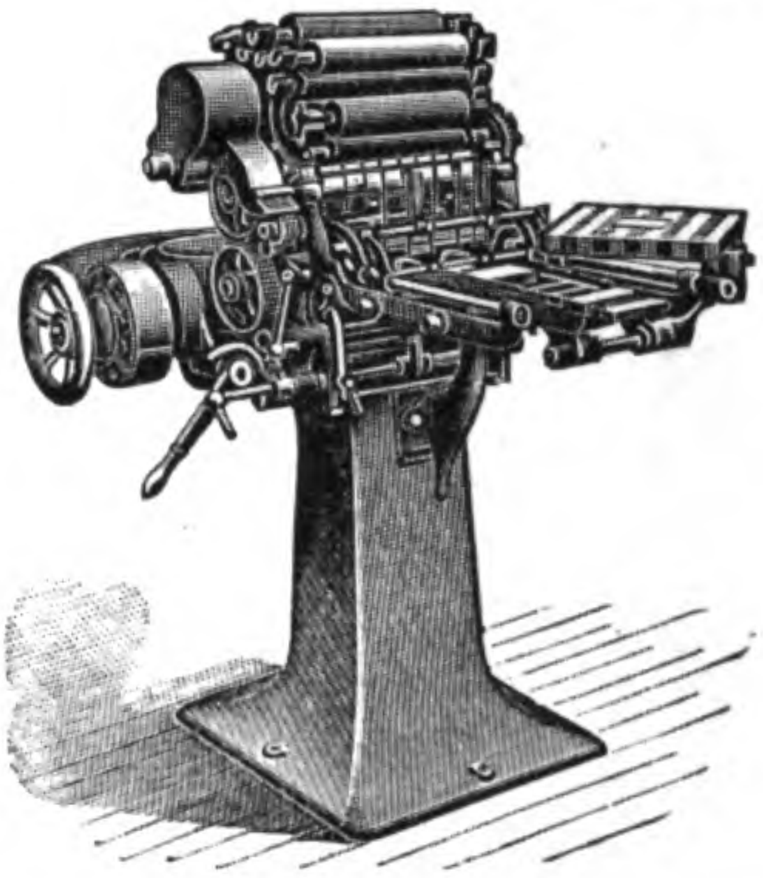
The shipping weights when closely boxed are: 8×12 press, 1100 lbs.; 9×13 press, 1150 lbs.; 10×15 press, 1600 lbs.; 11×17 press, 1700 lbs.; 13×19 press, 2100 lbs.



# HARRIS AUTOMATIC ENVELOPE AND CARD PRESS.

**Fastest Job Press. Speed from 5000 to 12,000 per Hour.**



The Harris Automatic is a self-feeding and self-delivering press of recent introduction but well-established reputation. It prints cards and envelopes in one or more colors in first-class style, and will supersede all other presses on work within its capacity in offices where envelopes, cards, or tags, are printed in large quantities in runs of 3000 at a time and upward. It registers closely. It has an automatic throw-off, which causes it to cease taking impressions whenever the grippers fail to grasp the sheet, thus effectively preventing waste of stock as well as offsets. The printing is done from curved stereo. or electro. plates. Making ready is convenient and easy. It is possible to make-ready and run off 5000 envelopes in forty minutes. Distribution is abundant and effective. There is an adjustable ink fountain. The capacity is from the smallest envelope corner to plates not exceeding 11×13 inches. Prices, terms, circulars, etc., sent on application.

# PEERLESS PRESS.

Of well-established reputation, smooth running, noiseless, easy to make-ready on, easy to feed, easy to run by treadle, with an effective throw-off, well built, exceptionally strong, and with a powerful toggle movement. The throw-off is positive and easy, and convenient to handle. The platen is sustained in the center by the toggle, and is strongest where platens are generally weakest, enabling the Peerless to do embossing and paper-box cutting and creasing, which taxes a press very severely. It is a fast press.

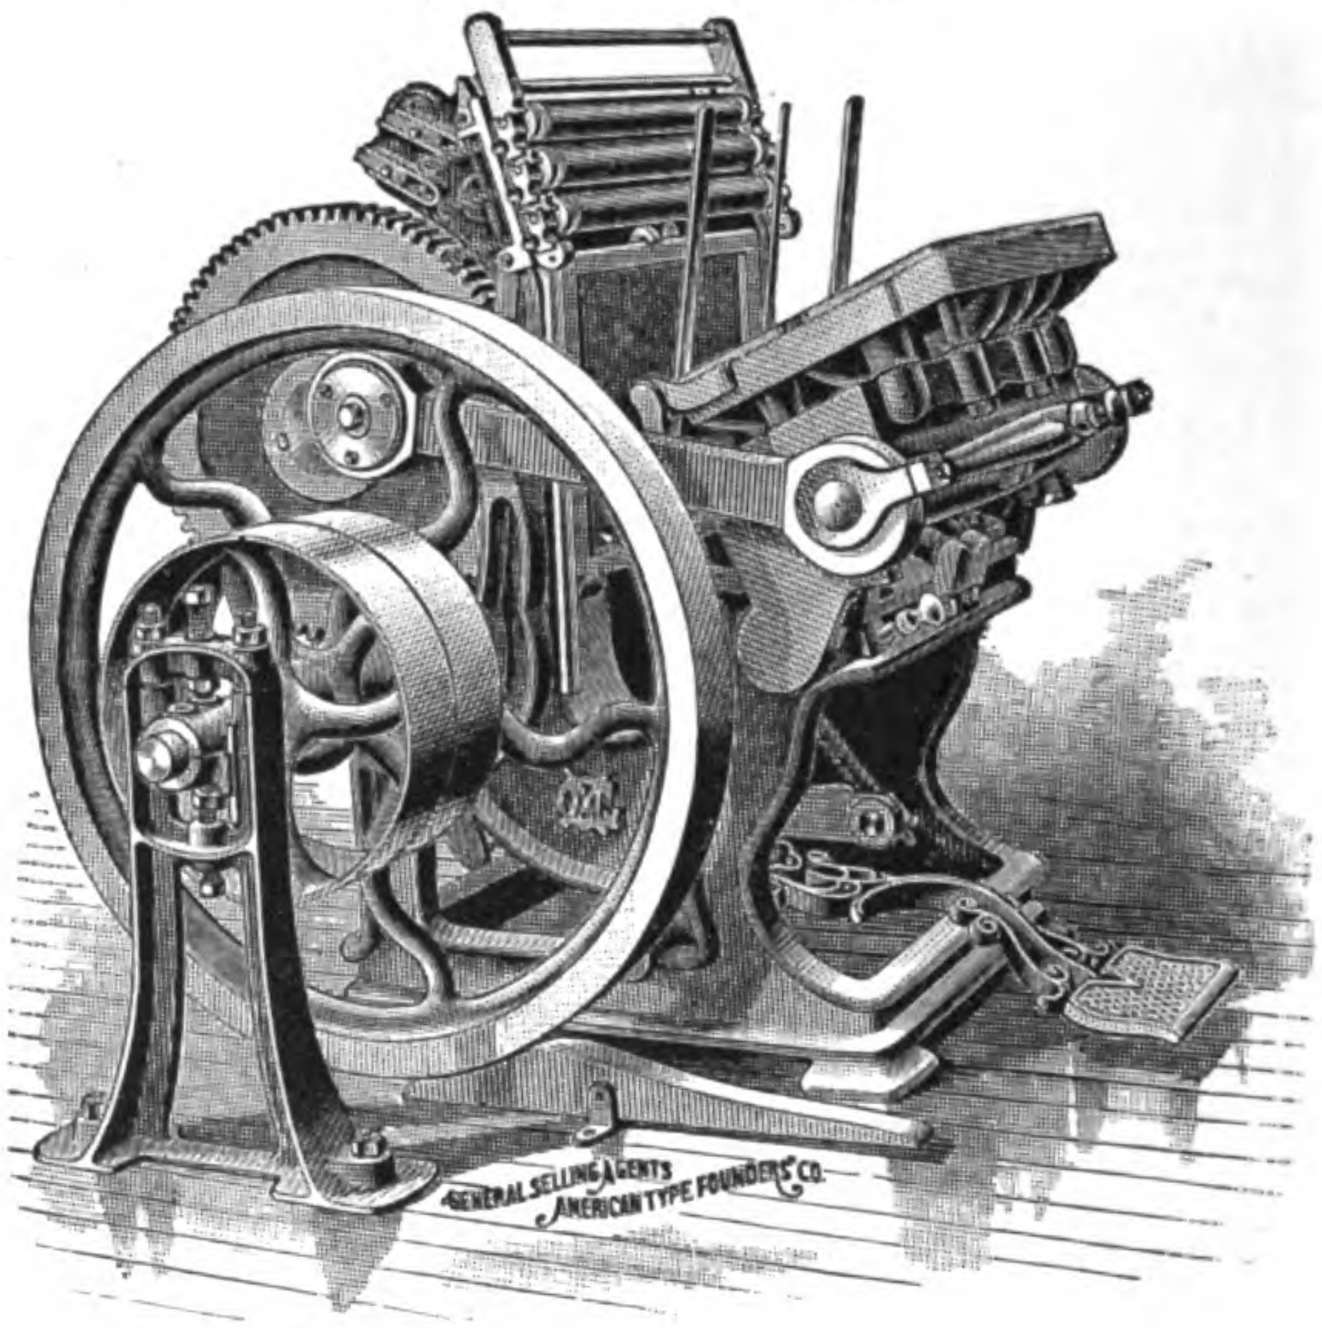
# GALLY UNIVERSAL PRESS.

*The Gally Universal Press is made in three styles, which are described on next page.*



Excels all other types of platen presses because: (1) The bed and frame are cast in one piece, securing rigidity and keeping all shafts in line in spite of irregularities in floor or foundation. (2) The platen moves up squarely against the type form, giving a perfectly square impression. (3) The platen has nine supports, and is extra heavy, and is the only platen capable of sustaining the powerful impression necessary to secure the best results on large forms of cuts. (4) The impression can be thrown off instantly, the throw-off being controlled by a bar directly behind the platen. (5) The impression can be changed instantly all over the platen, varying from the imperceptible to an eighth of an inch. (6) The platen opens out widely, making it easy to feed paper into it. (7) The ink fountain is as efficient as the fountains on the highest grade cylinder presses. It is the most perfect fountain for a platen press ever made. (8) The operations of ink distribution and "inking" the form are distinct, and each performed by a separate set of rollers. In addition to the fountain ductor roller, there are four ink distributers (two of composition, two of iron) which supply two inking cylinders, from which the three form rollers receive a fresh, distributed supply of ink at each impression. On all other types of presses the form rollers have to distribute the crude ink as it leaves the fountain. (9) The form rollers can be held against the inking cylinders for distribution, while getting up color, and need not touch the type form. (10) The ink fountain can be divided by partitions for printing two or more colors at one time. (11) The weight and strength are greater than in any other platen press, as it is designed to do work that cannot be safely attempted on any other type of press.

The Gally Universal is designed for use by the best class of printers. In the hands of competent pressmen the press is the most durable, and will do first-class work in perfect register longer than any other press. We can refer purchasers to presses which have been in constant use for twenty years, doing perfect work to-day, and bidding fair to give the best results for years to come.

The recent application of continuous-motion impression cranks and a new patented platen control have increased the speed on all sizes. Speed requirements vary with the kind of work.

## PRICES OF GALLY UNIVERSAL PRESSES.

*Complete with ink fountain, power fixtures, combination belt-shifter and brake, f. o. b. factory.*

| Half Super-Royal, | 14×22 inches inside chase . . | 515 00 | 575 00 | 650 00 |

The following small parts are included with each press: Three chases, one roller mould (for which two chases will be substituted, if preferred), six form roller stocks, four distributer roller stocks, two ductor roller stocks, twelve roller wheels (six large, six small), two iron lateral distributers, two feed tables, one small and one large wrench, one socket wrench, one chase latch wrench, and treadle fixtures. If treadle fixtures are not required, two chases will be sent in lieu of them.

Power fixtures include fixtures on the press only.

Boxing for export: Quarto Medium, $7 00; Half Medium, $10 00; Half Super-Royal, $15 00, net.

## DESCRIPTION OF THE THREE STYLES.

### STYLE ONE.

This is the style described above.

### STYLE TWO.

Differs from Style One in having a double impression latch and a steel segment in the gear at the point that takes the strain of the impression.

### STYLE THREE.

This style is recommended to those who want the best press procurable for executing the finest class of cut, solid block and color printing, cold embossing and stamping. This style is also made in combinations and for special work, as described hereafter.

The style No. 3 Universal Press differs from Style No. 1 in the following particulars: The driving shaft is extended to carry an extra outside floor support. The pulleys are intended to carry a 2½-inch belt on Quarto Medium and a 3¾-inch belt on larger sizes. The fly-wheel on Quarto Medium weighs two hundred pounds, and on the Half Medium and Half Super-Royal three hundred pounds each. The large gear-wheel has a section of best quality of steel welded into its periphery, in which are formed the impression teeth, *i. e.*, those teeth which are in engagement with the driving pinion and transmit the momentum of the fly-wheel to the cranks during the time of the "nip." The main shaft is of steel, with solid reamed bearing through the bed. The crank-pins are crucible steel, hardened and finely finished. The connecting rods are of forged machinery steel, very heavy, and bushed with phosphor-bronze where bearing on crank-pins. The bridge and platen are solid to each other—no pressure whatever being sustained by screws. Has double impression latch.

## COMBINATIONS OF STYLE THREE FOR SPECIAL WORK.

### COMBINATION B.

For letter-press printing and (in addition to all work that can be done on regular Style Three Press, listed above) book-cover inlaying, and cutting and creasing. This combination is fitted with a movable ⅛-inch steel platen plate and a movable ⅛-inch brass platen plate, the latter for use in cutting and creasing.

| | | |
|---|---|---|
| Quarto Medium, | 10×15 inches inside chase, complete . . . . . | $450 00 |
| Half Medium, | 13×19 inches inside chase, complete . . . . . | 626 00 |
| Half Super-Royal, | 14×22 inches inside chase, complete . . . . . | 676 00 |

### COMBINATION C.

For letter-press printing, hot embossing, and printing on wood not exceeding one inch in thickness (in addition to all work that can be done on Combination B). This combination is fitted with a steam blank (⅜-inch thick) with pipe connections, a movable ⅛-inch steel die plate on steam blank, a movable ⅛-inch steel platen plate, a movable ⅛-inch brass platen plate, a cast-iron platen blank, ⅜-inch thick, with tympan clamps attached, and a cast-iron platen plate ½-inch thick.

In ordering Combination C, it is necessary to state the average thickness of embossing dies. It is recommended that dies should not be more than ¼-inch thick.

### COMBINATION D.

For letter-press printing, printing on wood (not exceeding one inch in thickness) and cold embossing. This combination is fitted with a ⅞-inch movable platen blank and a ⅛-inch movable steel platen plate. Cutting and creasing can be done on this combination by adding a ⅛-inch brass platen plate, list prices $10.00 to $13.00 each.

| | | |
|---|---|---|
| * Quarto Medium, | 10×15 inches inside chase, complete | $474 00 |
| * Half Medium, | 13×19 inches inside chase, complete | 629 00 |

## * IMPORTANT NOTICE.

The specifications given for preceding combinations may be varied to accommodate the requirements of purchasers. In ordering variations from above specifications be careful to state exact thickness of plates and blanks required, and fully describe the work to be done on the press ordered. Special combinations for other purposes made to order at prices proportionate to those charged for above combinations.

## SPECIAL FEATURES OF THE GALLY UNIVERSAL PRESS.

### TWO TYPES OF PLATEN PRESSES.

The Universal Press, when invented and patented in 1869–70, differed radically both in its fundamental principles and labor-saving appliances from any other platen press in use at that time. Since then platen presses everywhere are divided into two recognized types or classes, each taking the name of the original inventor: the "Gordon" type, with its hinged or "clam-shell" movement of bed and platen, as imitated with slight variations under a great variety of names, all distributing ink by means of a disc, and the "Gally Universal" type, with its fixed bed, sliding platen, square impact of impression on the form, solid frame and cylindrical ink distribution.

### IMPRESSION.

The ideal impression is given by a Washington Hand Press, and the impression given by the Gally Universal is similar, and is perfect in practice and in theory. No other type of platen press can give a perfectly square impression.

The platen is massive, and is secured to the platen bridge by four controlling screws which pass through the bridge, and is supported at the corners and in the center by five adjustable screw supports, giving nine supports in all. Thus the utmost strength and an unyielding impression is obtained.

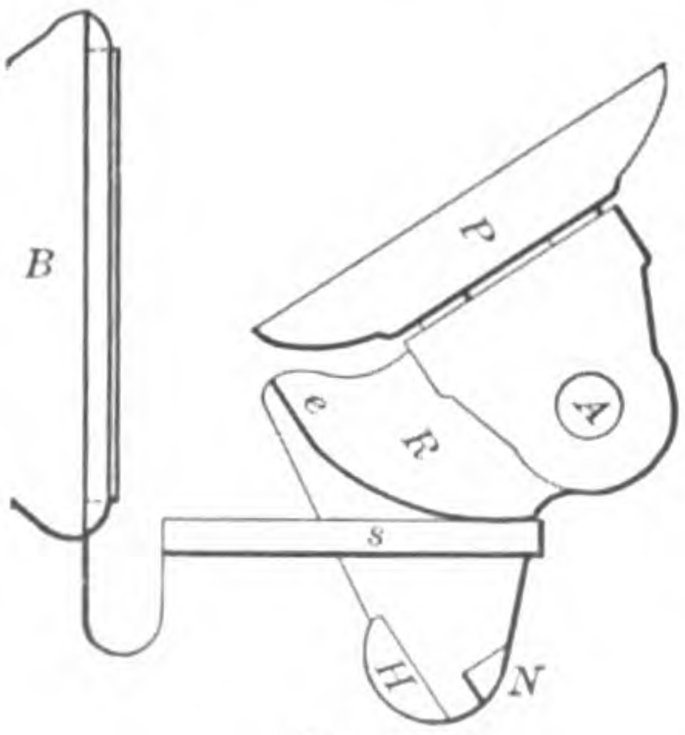

Fig. 2.

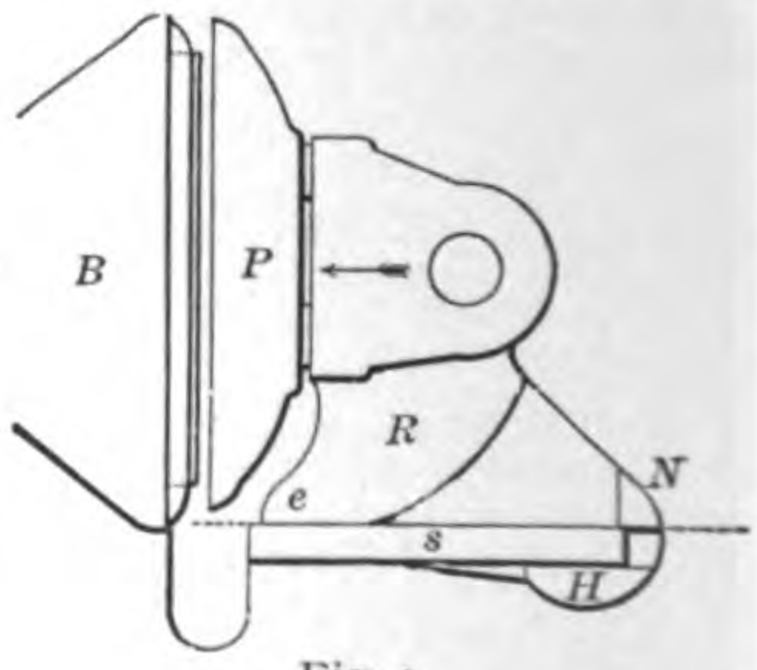

Fig. 3.

The platen movement in relation to the bed is illustrated in Figs. 2 and 3 (sectional drawings from the inside). Fig. 2 shows the platen open at the feeding position, supported by the rockers (*R*) on the slideways (*s*). The movement is controlled by the draw-bars, which connect with a steel shaft (*A*) passing through the platen bridge. As the draw-bars pull the platen toward the bed it rocks forward until the flattened toes (*e*) of the rockers rest on the slideways (*s*), as shown in Fig. 3.

The platen is now half an inch from the type form, and exactly parallel to it, and the locking lugs (*N* and *H*) have engaged the slideways at top and bottom, preventing the platen from tipping. Thus secured, the platen slides squarely to the type form, taking a direct face impression. The platen then slides back and rocks to the feeding position again. The curve of the rockers (*R*) are struck from a point at the center of gravity of the whole moving piece, so that the movement is accomplished with a trifling expenditure of effort.

## DISTRIBUTION OF INK.

The superiority of the Gally Universal Press is in no point more apparent than in the distribution and application of ink to the form. In Fig. 10 is shown the Gally Universal system of ink distribution. *C* is the main distributing cylinder, and *S* is the secondary distributing cylinder. The composition distributing rollers (*e* and *e'*) revolve on the distributing cylinders, and on top of the distributers are two metallic rollers (*v* and *v'*) with a steady lateral movement in opposite directions, constantly crossing and recrossing the lines of distribution. The ink is supplied from the fountain (*F*, Fig. 10) to the distributing cylinder (*C*), once at each impression, by the ductor roller (*H*), in an evenly spread line, immediately *after* the form rollers have left the cylinders to ink the form; and *before* the rollers have completed the rolling of the form and returned to the cylinders the applied ink is thoroughly distributed by the distributers (*e e'*), so that no undistributed ink can ever reach the form rollers or be applied to the form.

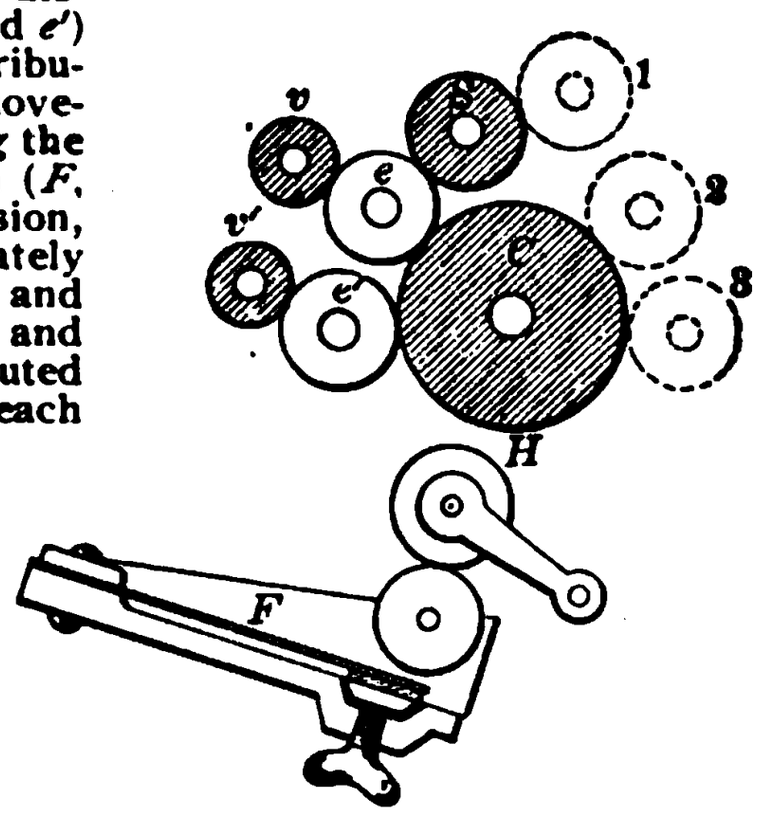

Fig. 10.

The distribution of ink is constant while the press is in motion, whether the form rollers (1, 2, 3) are in contact with cylinder or on the form. The cylinders, rollers and lateral distributers, as shown in Fig. 10, are made of different diameters on uneven measurements, so that their lines of contact are not repeated while revolving.

On presses with disc distribution the form rollers must distribute their own ink and convey it to the form, while on the Gally Universal these two functions are performed by two distinct sets of rollers. In the former case the work is necessarily imperfect; in the latter, both processes give perfect results.

## INK FOUNTAIN.

The Gally Universal ink fountain is as complete as the ink fountain of any first-class cylinder press. Every part of it is under positive control. The movement of the fountain cylinder (*R*, Fig. 19) is regulated by a ratchet lever. The ink is carried from the cylinder (*R*) to the distributing cylinder *C*, Fig. 10, by a composition ductor roller. In nearly all ink fountains the regulating screws press directly against the steel blade, and in setting for a fine feed have a tendency to bind the fountain cylinder. In the Universal ink fountain (Fig. 19) *A* is a steel blade, *e* is rubber packing, and *a* is a very thin strip of steel against which the screws (*T*) are set. The rubber (*e*) furnishes an elasticity which prevents the blade from binding, while giving a perfect cut off. With this safeguard a press boy may be trusted to regulate the fountain. The fountain may be removed easily from the press to be cleansed, and is made interchangeable so that an extra fountain for colors may be put on in a few moments.

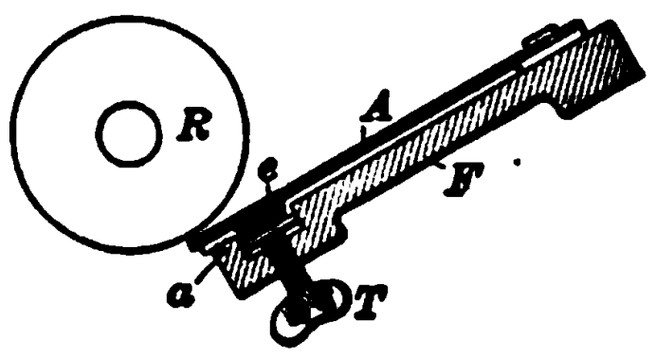

Fig. 19.

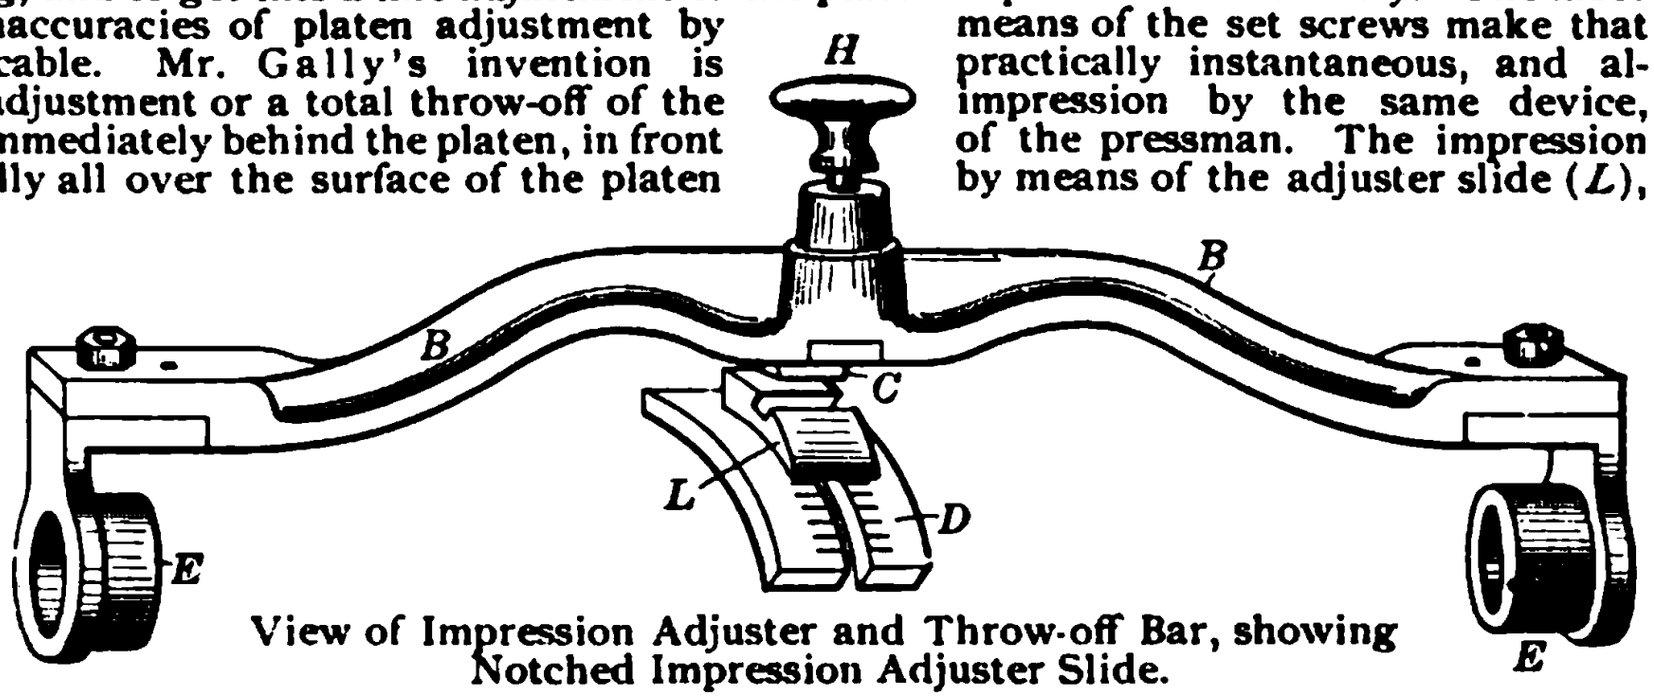
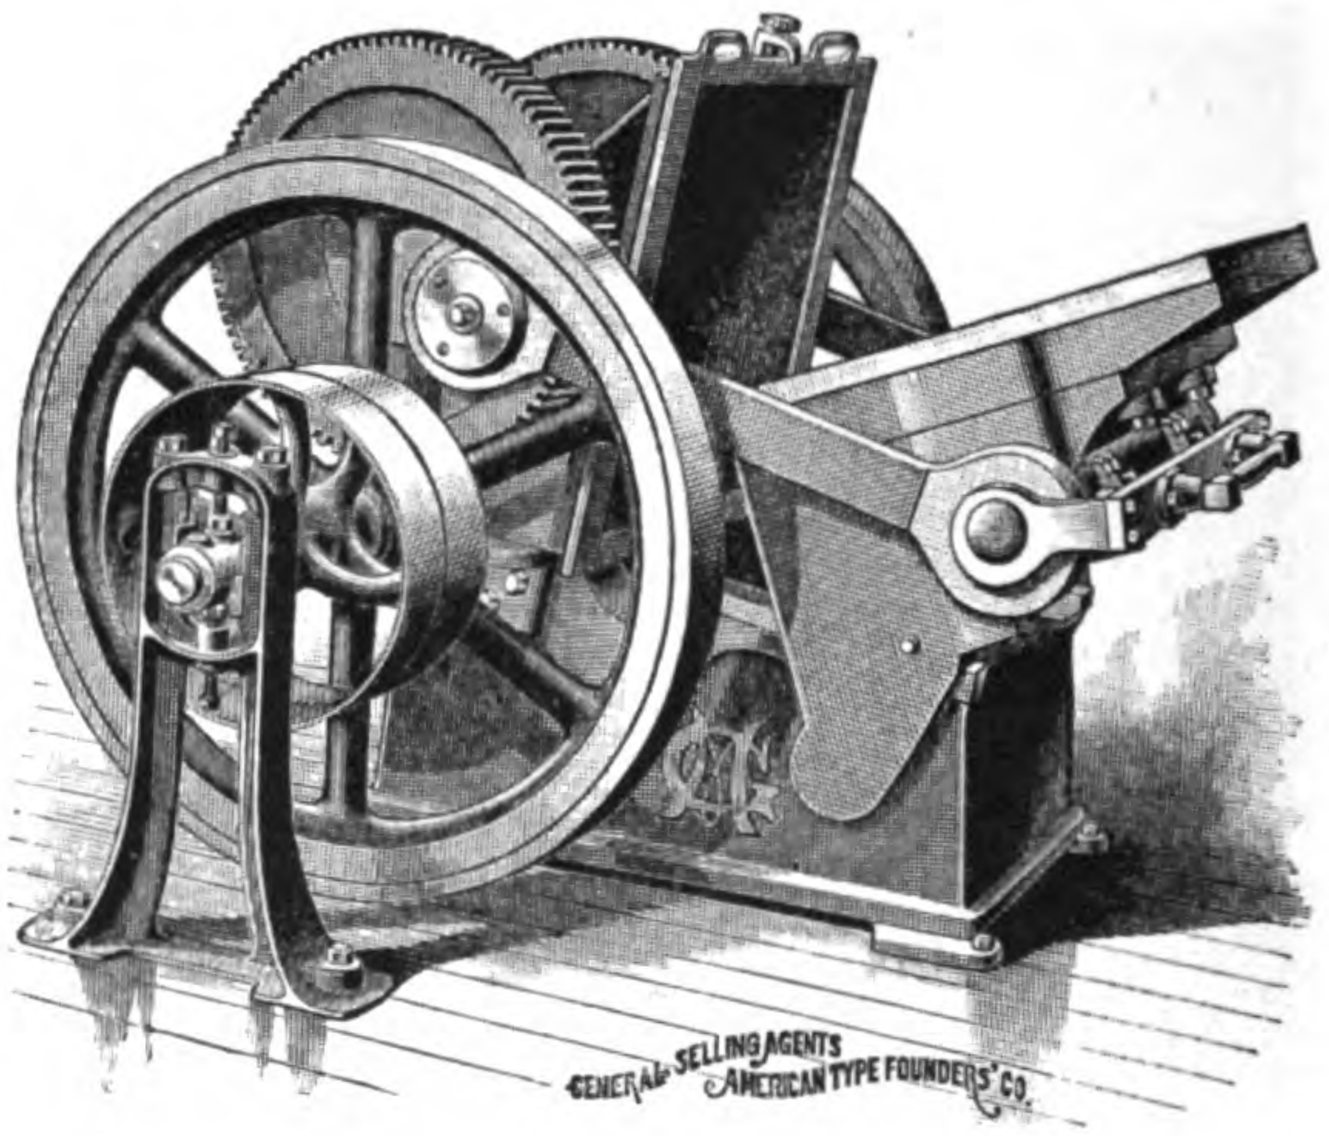
## ADJUSTMENT OF IMPRESSION AND THROW-OFF.

The Gally Universal Press was the first to have a quick, easy method of adjusting the impression, and the Gally invention is still unexcelled. The theory of modern fine printing calls for a minimum of tympan packing, and to get this a fine adjustment of the platen impression is necessary. The labor as well as the inaccuracies of platen adjustment by means of the set screws make that method impracticable. Mr. Gally's invention is practically instantaneous, and allows of very fine adjustment or a total throw-off of the impression by the same device, which is located immediately behind the platen, in front of the pressman. The impression is regulated equally all over the surface of the platen by means of the adjuster slide (*L*), which can be moved up or down, increasing or decreasing impression from a tissue paper's thickness to ⅛ of an inch. This slide is notched, and the latch (*C*), which is the lower end of the throw-off handle (*H*), engages in this notch. When it is desired to throw off impression, the handle (*H*) is pulled, the latch (*C*) is disengaged, and the adjuster bar (*BB*) drops down, carrying the platen back and preventing it from taking an impression.



View of Impression Adjuster and Throw-off Bar, showing Notched Impression Adjuster Slide.

# GALLY UNIVERSAL EMBOSSING PRESS.



These are the largest embossing presses made, and combine strength, power, speed and facility for handling work easily in a degree unequaled by any other press. They are designed for extra heavy hot or cold process embossing, and book-cover stamping ("smashing"). The mechanical principles employed to give impression, power, and to throw-off impression, are the same as described on pages 900 and 901. Nothing better demonstrates the correctness of the mechanical principles on which Gally Universal Presses are built than their applicability to all degrees of power and strain. Every other type of platen press has its limitations—a point where it gets unwieldy and inefficient.

## PRICES OF PRESS ONLY.

| | |
|---|---|
| No. 1. 21¼ × 22-inch bed-plate | $800 00 |
| No. 2. 24 × 26-inch bed-plate | 900 00 |

## PRICES OF EXTRA ATTACHMENTS.

| | |
|---|---|
| Steam blank, complete, with pipe connections, for No. 1 embosser, with steel die plate | $105 00 |
| Steam blank, complete, with pipe connections, for No. 2 embosser, with steel die plate | 118 00 |
| Steel platen plate for No. 1 embosser | 19 50 |
| Steel platen plate for No. 2 embosser | 26 00 |
| Cast-iron platen blank for No. 1 embosser | 19 50 |
| Cast-iron platen blank for No. 2 embosser | 26 00 |

Each press is complete with power fixtures on press.

Each press is furnished with three chases (or one cast-iron bed blank in lieu of chases, at option of purchaser), two feed tables, one wrench, one belt-shifter and one brake.

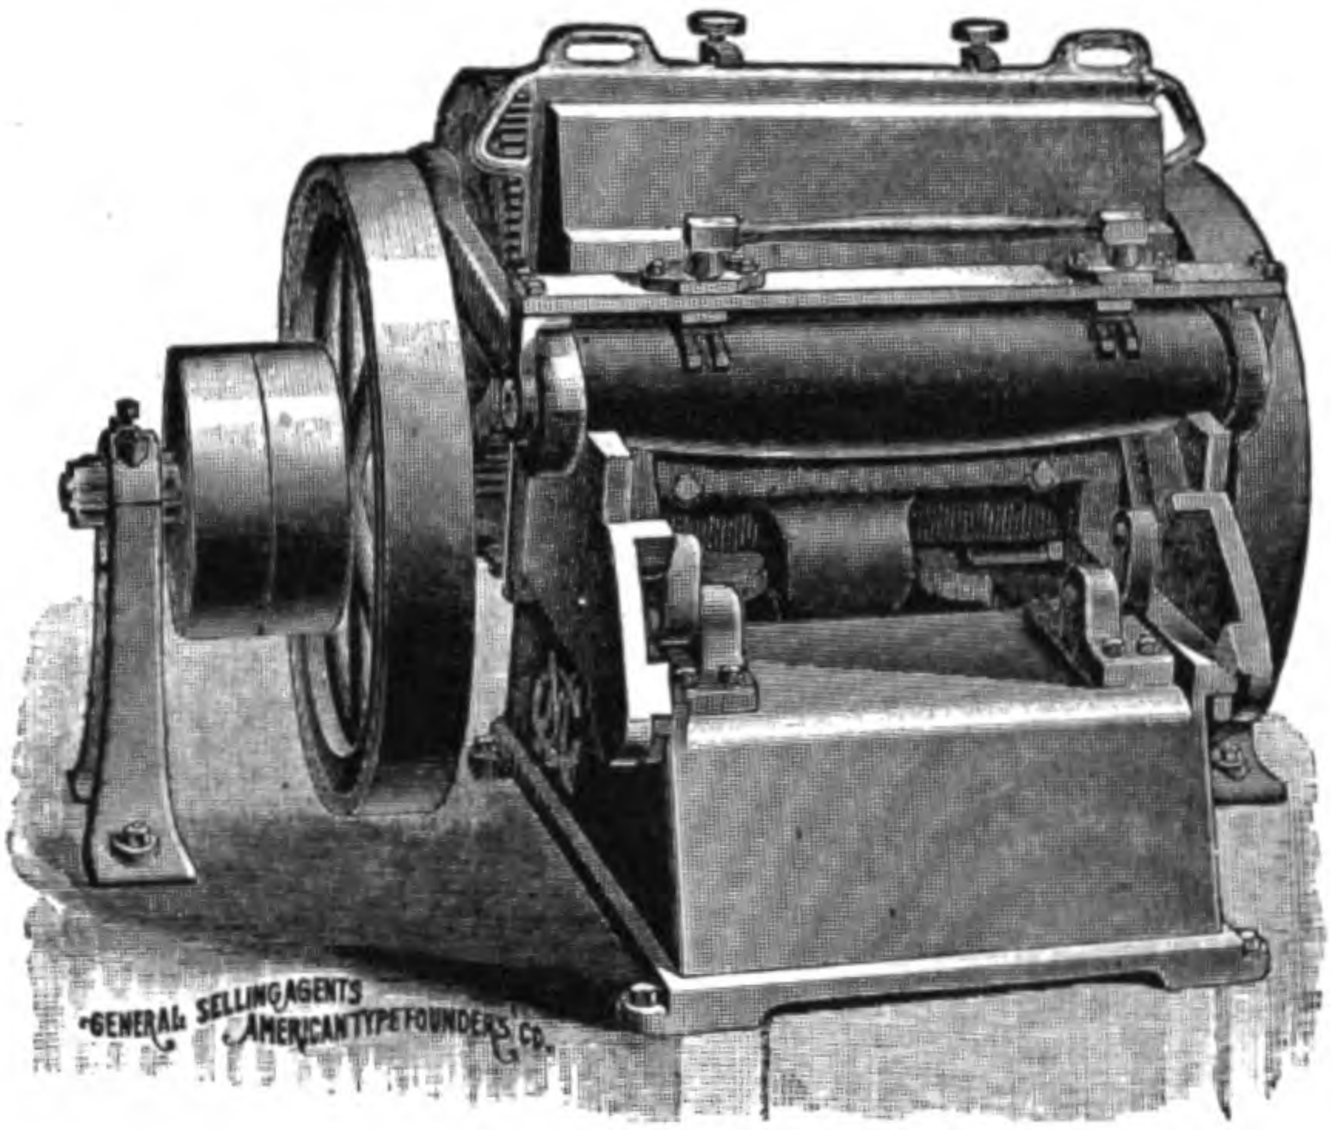
Gross weight, boxed, of embossing presses are: No. 1, 3400 pounds; No. 2, 4300 pounds.

Boxing for export: No. 1, $10 00; No. 2, $15 00, net.

Prices are f. o. b. factory.

# GALLY UNIVERSAL PAPER-BOX CUTTING AND CREASING PRESS.

(*See "Paper Box Making" at foot of this page.*)



The most satisfactory presses for cutting and creasing paper boxes. Immensely strong, easy to operate, with speed limited only by the capacity of feeder. They will not stall on the heaviest impression. They are built on the same general lines as the Gally Universal Embossing Presses, and have extra steel-gibbed locks on under edge of the platen to prevent deflection of the platen under unequal strain. The platen, which has a throw-off, is set to height of type unless otherwise ordered. Both sizes are double geared.

Boxing for export: No. 1, **$15 00**; No. 2, **$20 00**, net.

## FOLDING PAPER BOX MAKING.

The process of making folding paper boxes is simple. The stock used is manilla board, made specially for the purpose. A cutting and creasing press is the same as an ordinary printing press, except that it is larger, has to be stronger, and does not require an inking apparatus. The shape of a box having been decided on, a form is set up with steel cutting and brass creasing rules—the former to cut out waste margins and to make slits, and the latter to crease or score the lines on which the stock in the box must bend when set up for use. It is usual to cut and crease as many boxes at one time as can be cut out from a full-sized sheet. The box leaves the press flat. It is then folded once and glued on one edge, and delivered flat. Any printing required is done before cutting and creasing. Any good compositor will understand the process after reading above explanation and examining a folded paper box. The glueing is done by a machine of moderate cost.

# THE GOLDING JOBBER.

This press can be bought with or without a number of attachments, such as an automatic brayer fountain, a duplex distributer (which is placed below the bed of the press and furnishes a fresh supply of ink to the form rollers after they have passed downward over the form), a chromatic attachment, and a counter for registering the number of actual impressions, the prices for which are given separately below.

Shows style of Nos. 6, 7 and 8 Golding Jobbers.

## PRICES OF PRESS ONLY.

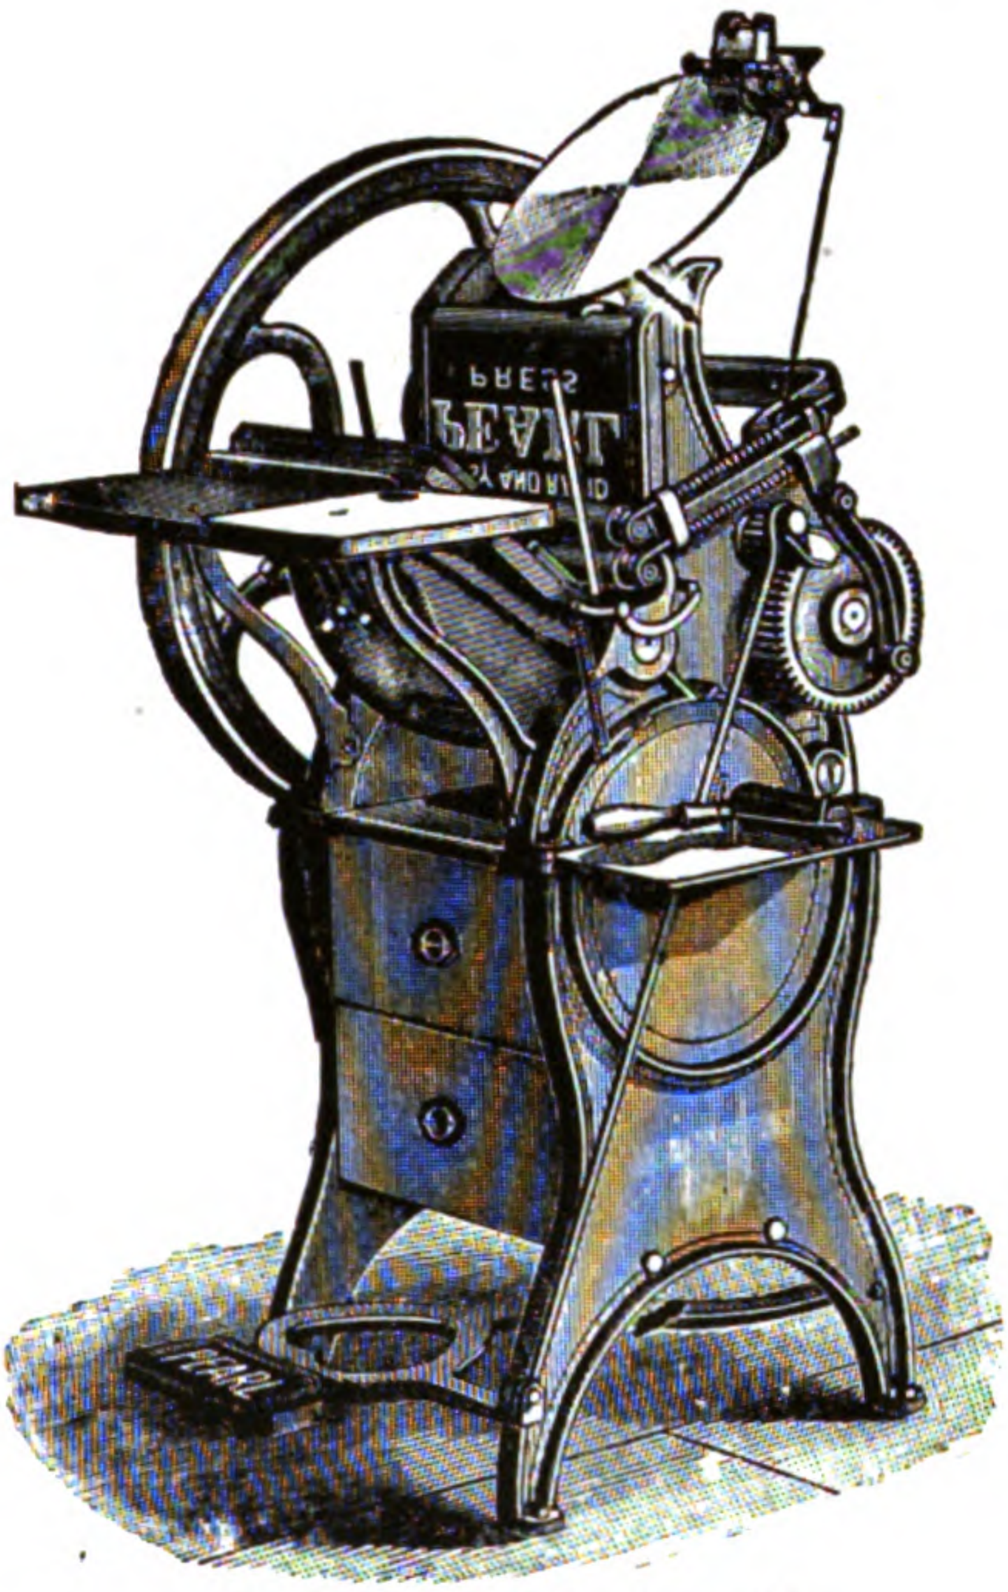
# GOLDING ART JOBBER.

This press is built on the same general lines as the Nos. 6, 7 and 8, illustrated above, but is heavier and stronger; has gear-wheel inside the frame; has impression adjustment at back of bed instead of at back of platen; has four form rollers and a duplex distributer (the latter placed immediately under bed, so that ink on rollers is re-distributed before the rollers return over the type form); throw-off by means of an eccentric shaft instead of by wedges; and the automatic brayer fountain covers the full length of the disc instead of half of it. This press is also supplied with the half-length automatic brayer fountain, if desired.

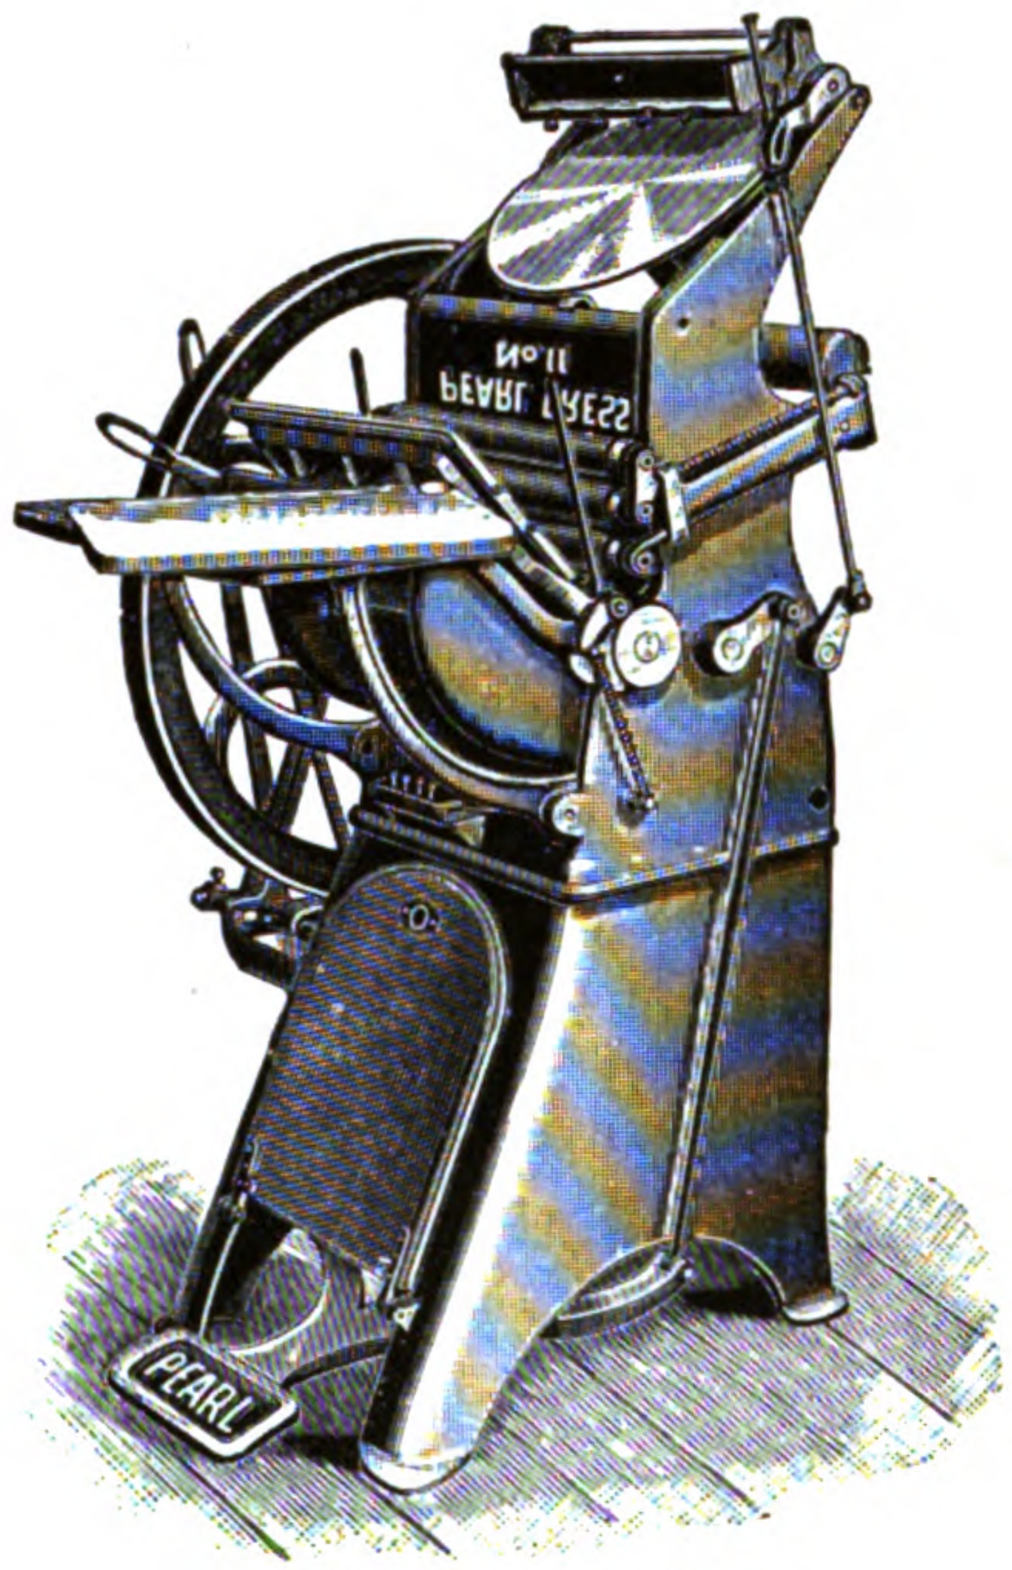
| | |
|---|---|
| No. 18 Golding Art Jobber, 12×18 inches, complete, with power fixtures | $500 00 |
| No. 18 Golding Art Jobber, 12×18 inches, with half-length automatic brayer fountain and power fixtures | 470 00 |

CHROMATIC ATTACHMENT for No. 7 Jobber, including full-length fountain, $65.00 additional to price of complete press; for No. 18 Art Jobber, having full-length fountain, $50.00 extra.

# PEARL PRESSES.



Pearl Presses, Nos. 1, 3 and 5.



Pearl Presses, Nos. 11 and 14.

Light running presses, without side-arms, very rapid, easy to feed, and handy to make-ready on. They are practically noiseless, easy to keep in repair, and specially desirable in offices that have no power. The No. 1 has three drawers and the No. 3 two drawers in their stands.

## PRICES OF PEARL PRESSES.

Nos. 1, 3 and 5 have no throw-off. Nos. 1, 3 and 5 have two rollers; Nos. 11 and 14 have three rollers.

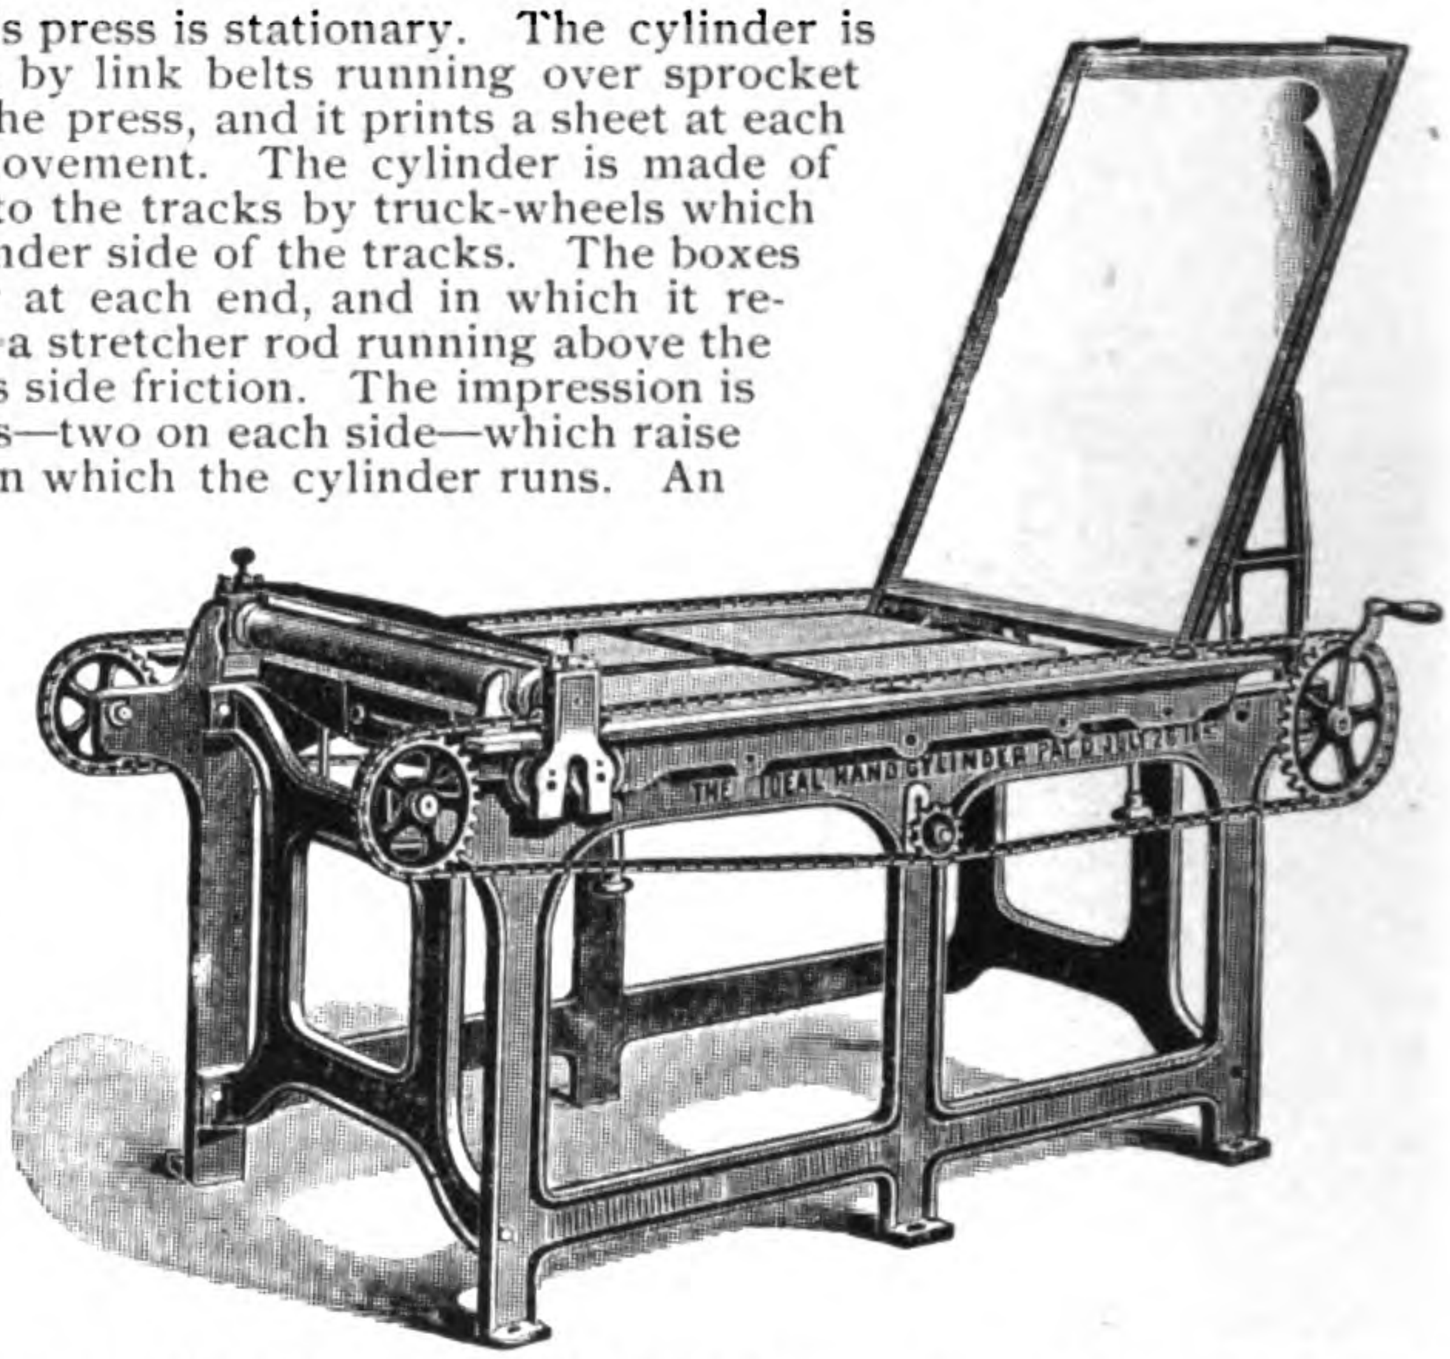
| 29×43 inches | 33 ×48 | inches, for 6-column quarto | 325 00 |

Above prices include two pairs of points, one wrench, one sheepsfoot, pair of bearers, and one extra frisket.

**As a rule we can supply second-hand Washington Hand Presses of all sizes on demand.**

## IDEAL HAND CYLINDER PRESS.

The type form on this press is stationary. The cylinder is moved over the tympan by link belts running over sprocket wheels at each end of the press, and it prints a sheet at each forward or backward movement. The cylinder is made of steel, and is held firmly to the tracks by truck-wheels which run in a groove on the under side of the tracks. The boxes which hold the cylinder at each end, and in which it revolves, are connected by a stretcher rod running above the cylinder, which prevents side friction. The impression is regulated by four screws—two on each side—which raise or depress the bearers on which the cylinder runs. An effective inking apparatus is supplied, but is extra. A number of Ideal Presses are in use, and intending purchasers may gather how satisfactory they are to the users by reading the following extracts from a great many commendatory letters received:



"My wife ran off 300 an hour on it the first day it was put up." * * * "With it our inexperienced pressman has made the following speed: 750 impressions in 75 minutes; 475 in one hour; 100 in 11 minutes. We run a regular lick of 100 every 15 minutes, or 400 per hour." * * * "We can run an edition in one-half the time and secure a better print than on our Washington." * * * "The press is so simple that the veriest novice can set it up, and so light-running that a boy may operate it with ease." * * * "It is far superior to my old Washington for speed and quality of work."

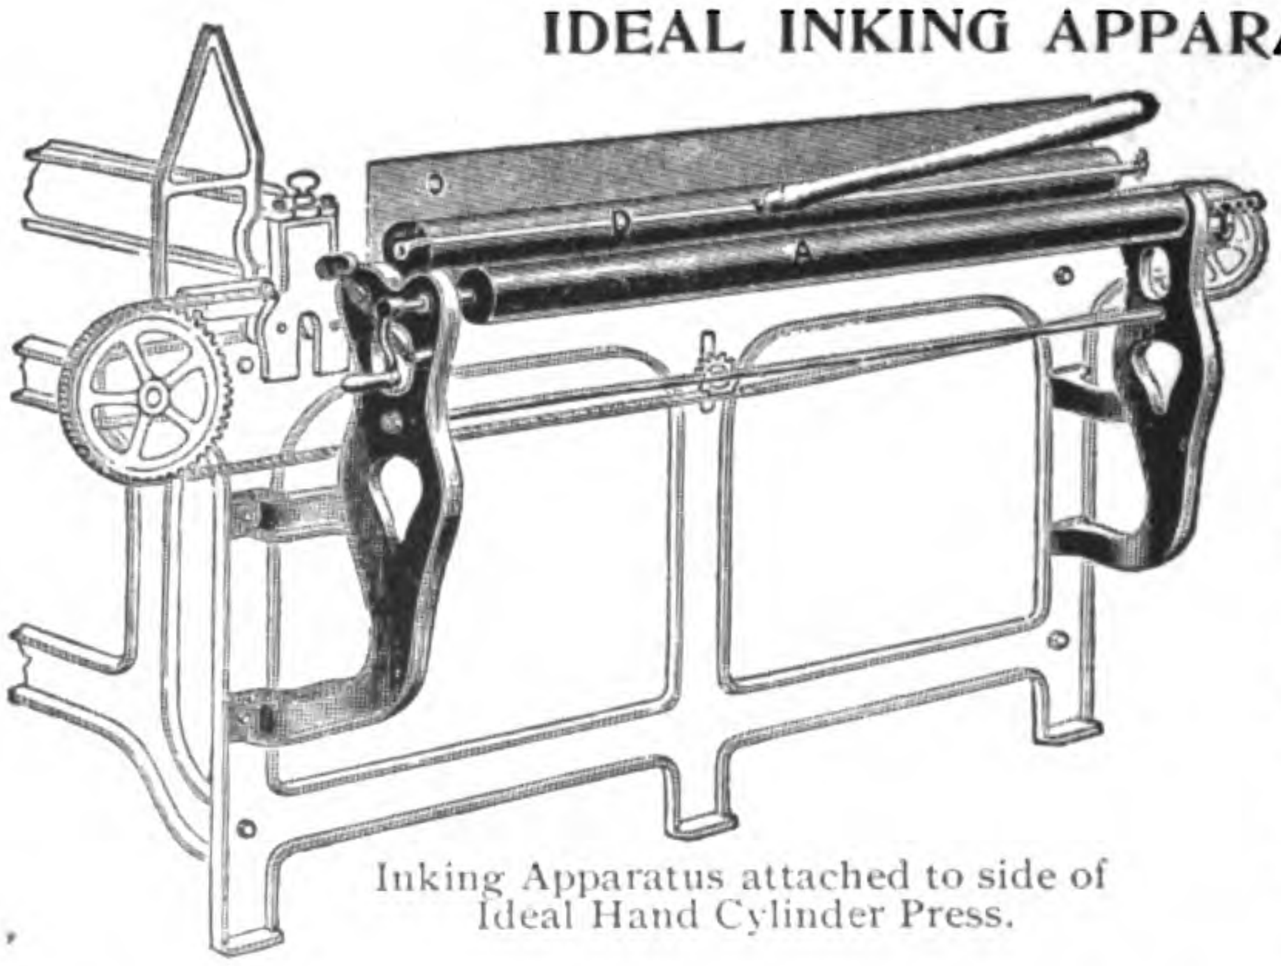
## IDEAL INKING APPARATUS.



Inking Apparatus attached to side of Ideal Hand Cylinder Press.

There are two inking cylinders (A and B), one of which (A) revolves by means of the hand crank, and while revolving it automatically vibrates. The inking roller (D) rests on the inking cylinders and receives its supply of distributed ink. When the roller (D) is pushed toward the form, the automatic sheet-steel drop-leaf ink table (C) descends on the bed of the press and the roller (D) passes easily on to the type form. When the roller returns, the ink table (C) resumes its perpendicular position automatically. The Ideal Inking Apparatus is not furnished with the Ideal Press unless specially ordered.

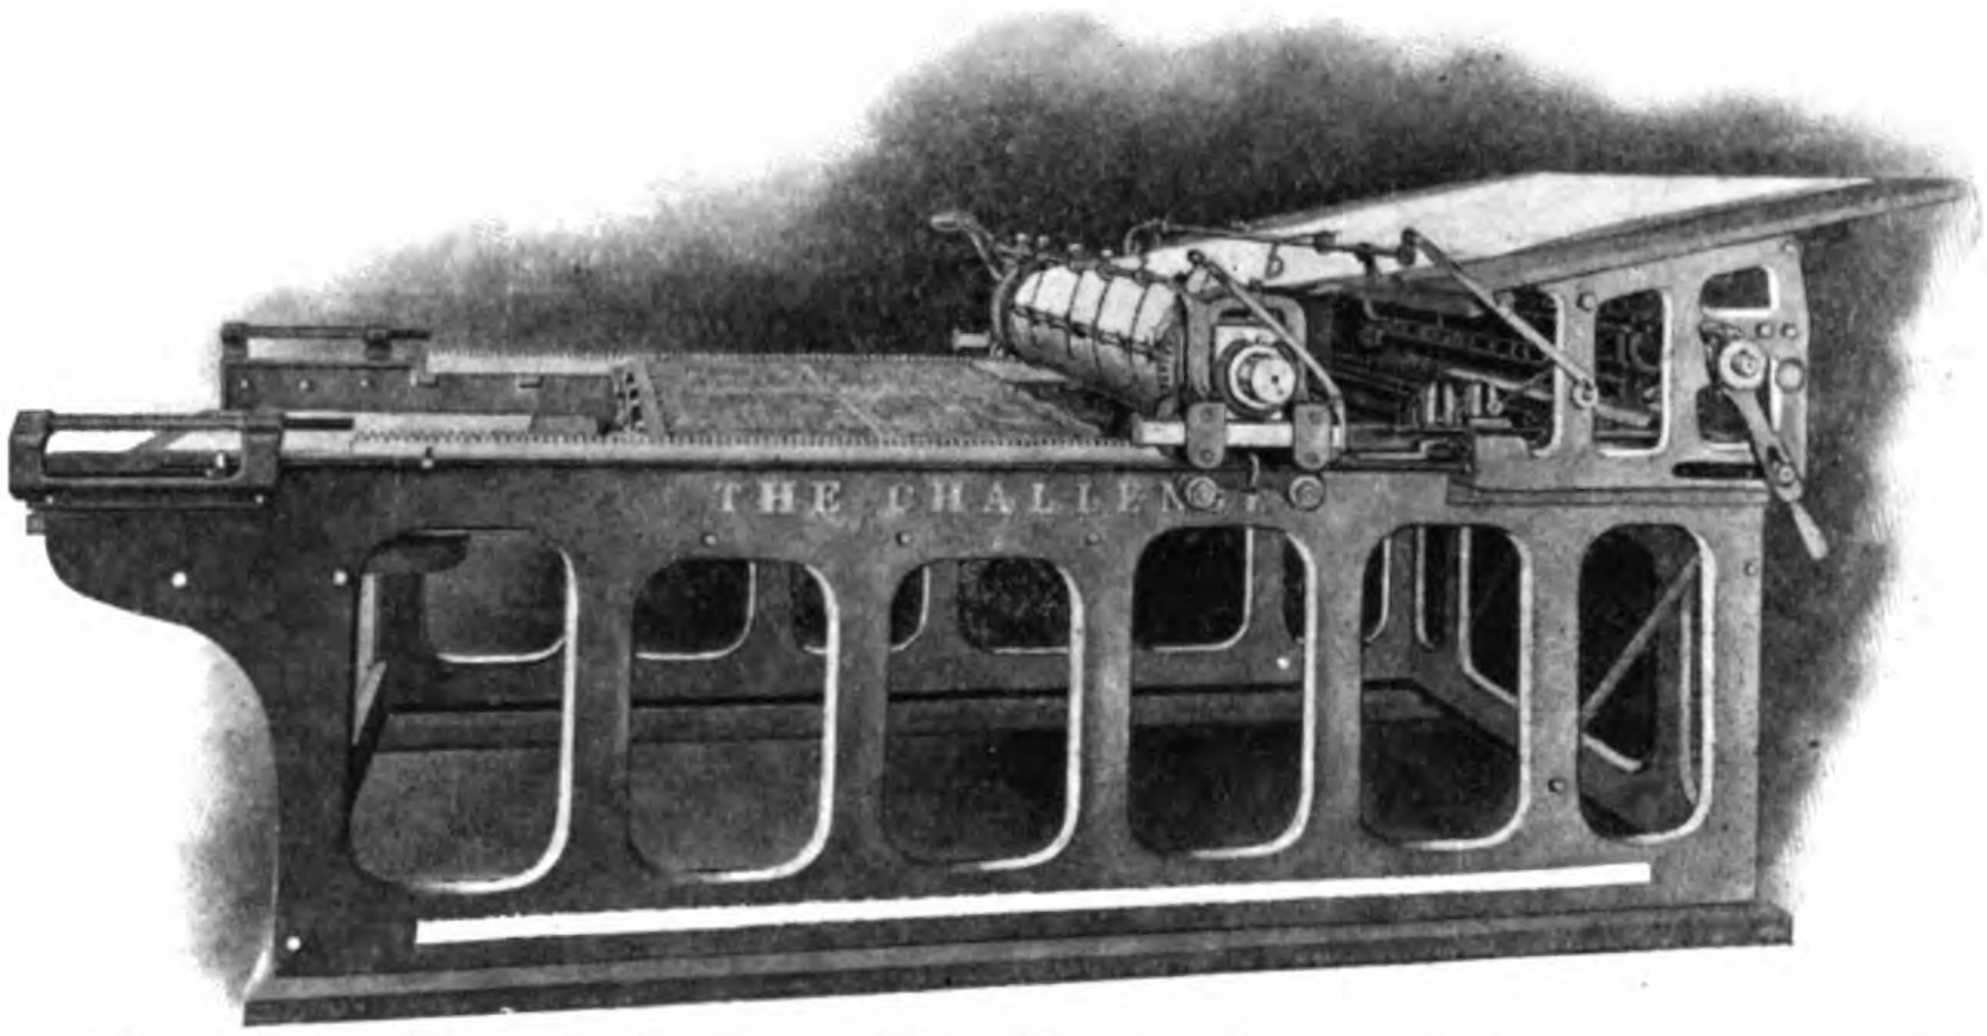
## CHALLENGE COUNTRY HAND CYLINDER PRESS.



The cut shows the cylinder just as it is taking the sheet, and about to pass over the form. To run it the operator stands on the farther side, about the center of the press, takes the handle with the left-hand, swings the cylinder to make the impression, the right hand carrying it forward to deliver the printed paper and start the cylinder back to receive another sheet. The cylinder travels by means of gears over steel racks, and carries the inking apparatus with it over the stationary type form. The cylinder is lowered automatically just before taking the sheet, and raised when it reaches the delivery end so as to clear the form when returning to the feed-board.

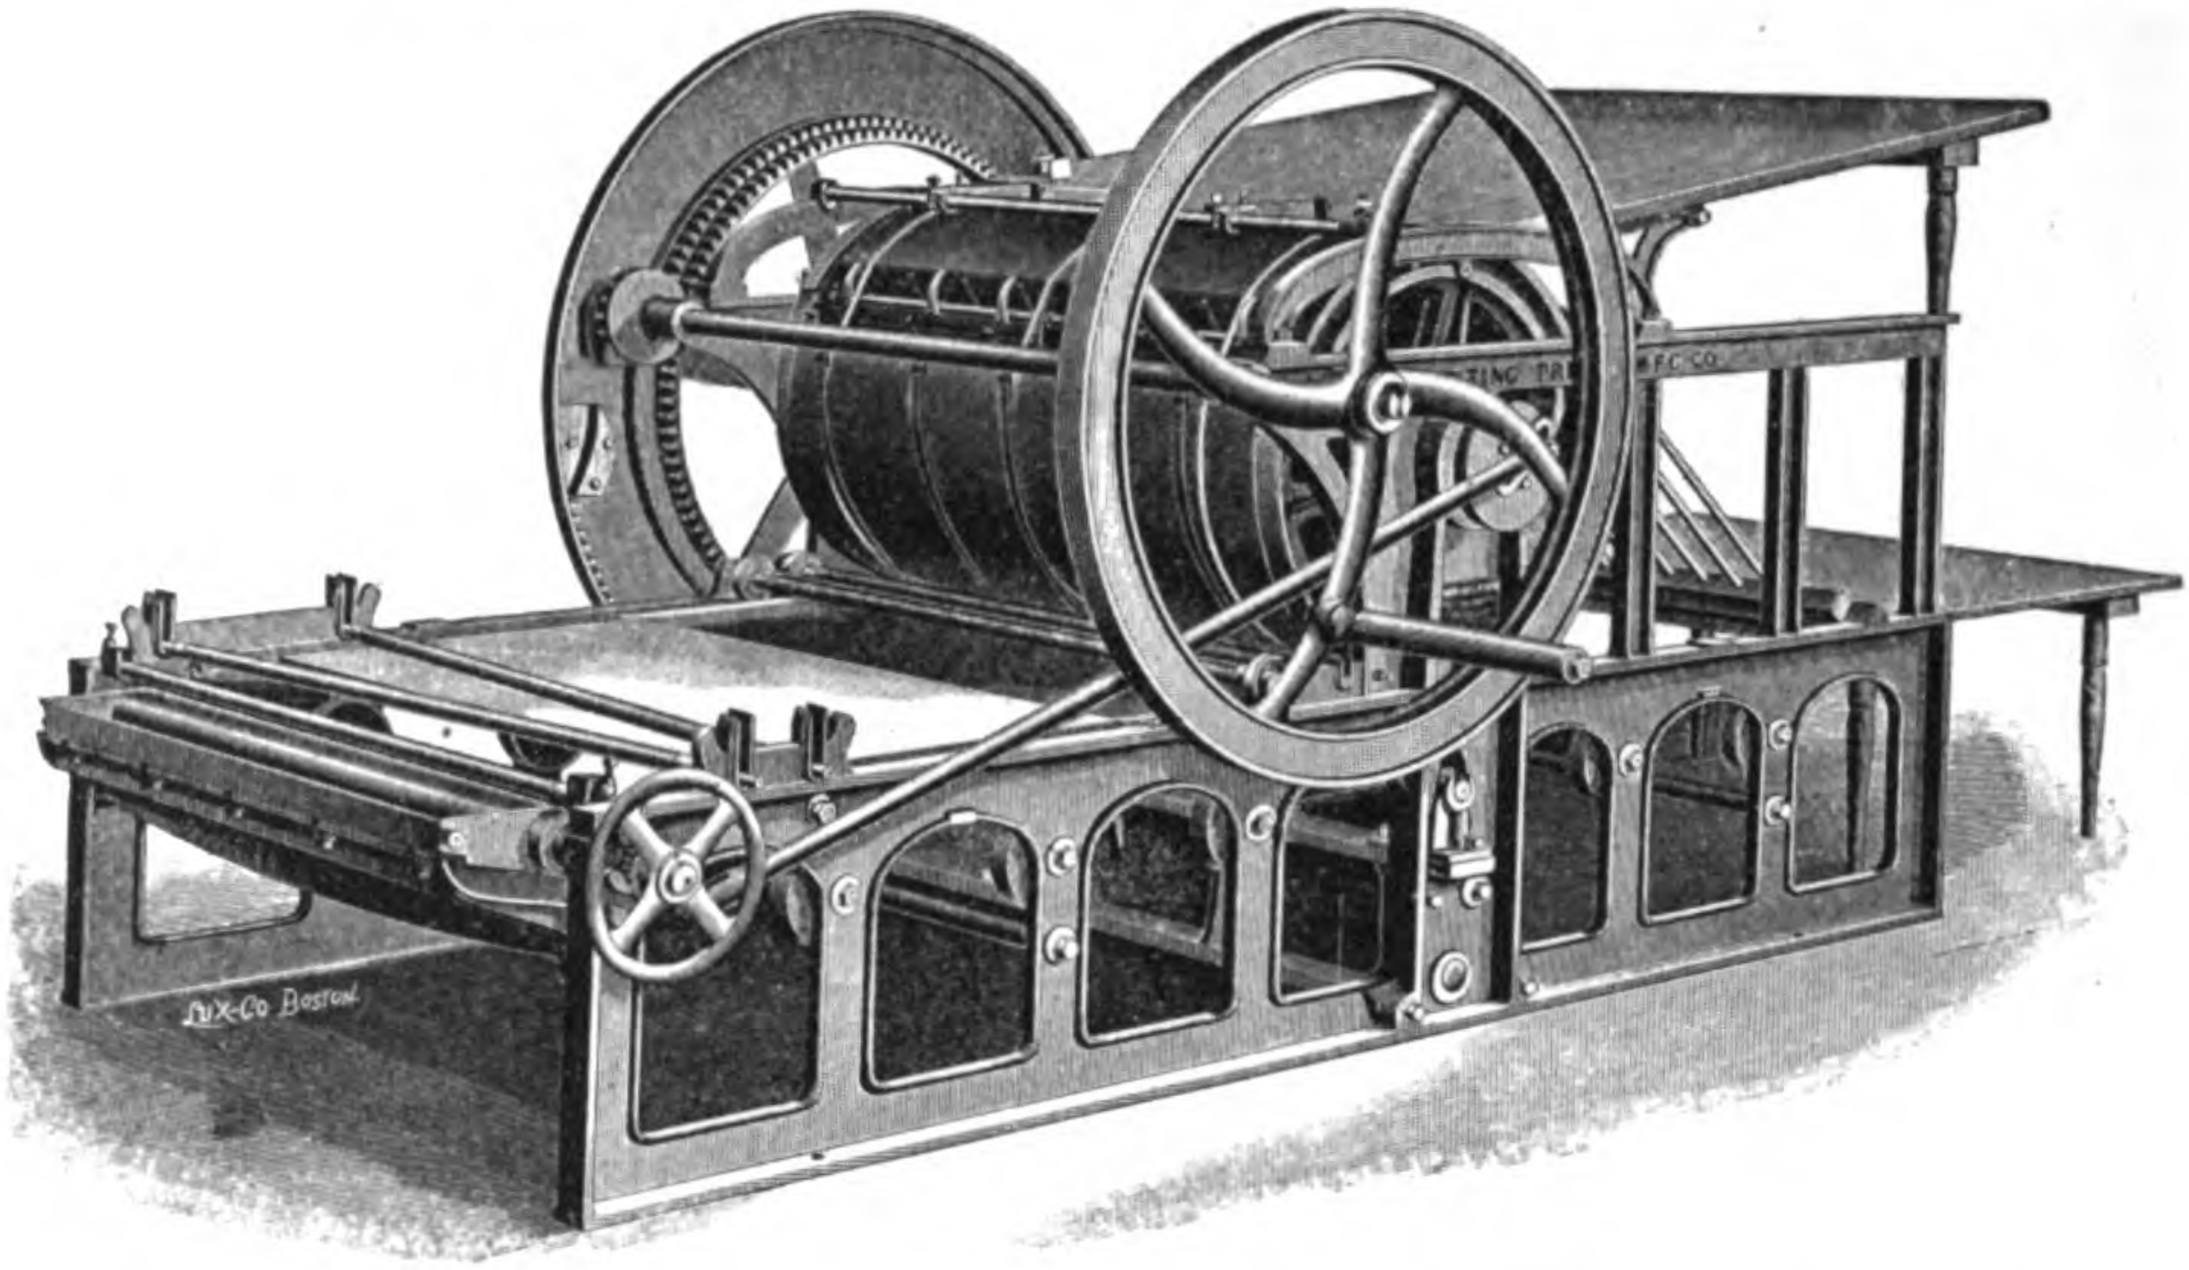
# CAMPBELL COUNTRY HAND CYLINDER PRESS.



The Campbell Country Hand Cylinder forms a class by itself, and occupies, without a satisfactory rival, the entire field between the Washington hand press and the power cylinder. Thousands are in use, and it has proved a stepping-stone to fortune for a great number of publishers during the past thirty years. It is constructed on the same successful mechanical principles as are used in building the more expensive power cylinder presses, and power fixtures may be added at a small cost. The wear of type on this press is much less than on that class of presses which are constructed on the crude principles of a proof press.

No. 2. Bed, 33×48 inches. Form, 28×44 inches. Standard size for 9-column folio and 6-column quarto . . . . . **$800 00**

No. 3. Bed, 30×43 inches. Form, 25×39 inches. Standard size for 8-column folio and 5-column quarto . . . . . **700 00**

A rubber blanket, one set composition rollers, extra set stocks, tapes, wrenches, boxing and shipping, are furnished with these presses.

Tight and loose pulleys and belt shifter for power, **$15 00** extra.

## TESTIMONIALS SELECTED FROM HUNDREDS EQUALLY FAVORABLE.

*J. H. Wilcox, Portsmouth, Va.:* "You are mistaken as to my having purchased a Campbell Hand Cylinder Country Press in 1890. I bought one in 1886, and I take great pleasure in saying that it has proved in every way most satisfactory. One small man can turn it continually for hours with ease. It does not get out of order except through negligence, and it is very simple in its operation. This press, I believe, is about sixteen years old, if not older, and it will probably last another sixteen years, if not longer."

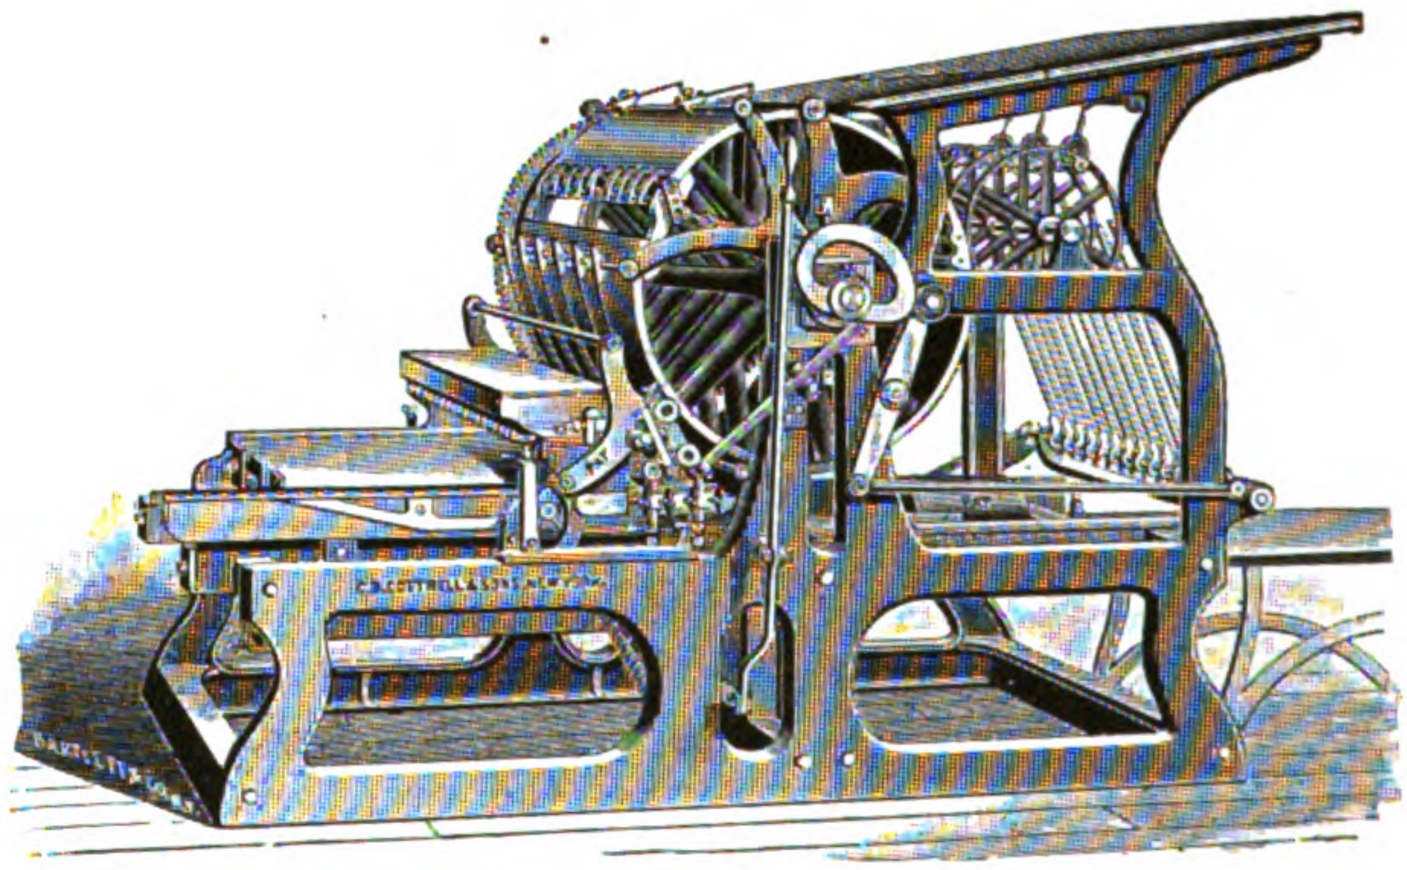
*Theo. P. Wilson, Winchester, Mass.:* "The Campbell Hand Cylinder Country Press purchased from you in August, 1889, has given the utmost satisfaction during its over two years of constant service. I have not spent a cent for repairs, and consider it as good as when first set up. The press is now run by water power, and can print 900 papers per hour. The *Star* I consider one of the cleanest printed papers in this section."

*Paragraph Publishing Co., Mamaroneck, N. Y.:* "We take great pleasure in saying that the Campbell Hand Cylinder Press purchased of you in September, 1890, has proved in every respect a first-class machine. Although intended to be run by hand, we have been running our press by power for the last three months at an average speed of 840 to 900 per hour. As the press has no springs, we consider this a performance with which we are pleased, and of which you have reason to be proud.

*T. H. Harter, Middleburgh, Pa.:* "I have been using a Campbell Press for four years, and take pleasure in recommending it to the trade. For simplicity, durability and ease on type it cannot be excelled. My issue of 1600 (6-column quarto) is turned off in two and a half hours, including all stops, and the press hasn't been out of order since I had it, with the exception of the fly-spring breaking. I would not trade it with any press on the market for a country office."

# COTTRELL TRIUMPH COUNTRY PRESS.

**With Patent Air Springs.**



Adapted for printing newspapers, pamphlets, posters, circulars, and all classes of commercial printing. Conforms in construction, design, durability and finish to the high reputation of the manufacturers.

The press is supplied with patent air springs, the resistance of which is increased or decreased according to the speed of the press. It is well known that the faster the speed the greater strength of spring is required. The patent air spring covers these requirements. If the press is running at five hundred per hour, the spring can be easily regulated for that speed; and if running at fifteen hundred per hour, the proportionate increase of spring can be obtained, and so up to the highest speed of which this press is capable. The air spring is provided with an automatic throw-off that releases the pressure when the press is stopped, and the pressman can move the bed to and fro without compressing the spring. When the press is started, the spring is applied automatically.

The patent hinged roller-frame permits of the rollers being instantly uncovered for removal or for other purposes without unscrewing the sockets. The rollers can be taken out and put back without changing their set. The well-fountain is used, being easily regulated and cleansed, and it is set high, giving easy access to the form. The distribution is ample—two three-inch rollers covering the full form. The bed has four supports while under impression, thus securing a clear, even impression. The shoes, tracks and rollers are of hard steel. The gearing is accurately cut, which, together with the registering rack and segment, insures perfect register.

The Triumph Press is built with table, rack and cam distribution, or with the rack and cam distribution, as per illustration on this page.

The Triumph Press can be fitted to run by hand power, when so desired. Tapeless delivery furnished, when required, at an extra charge.

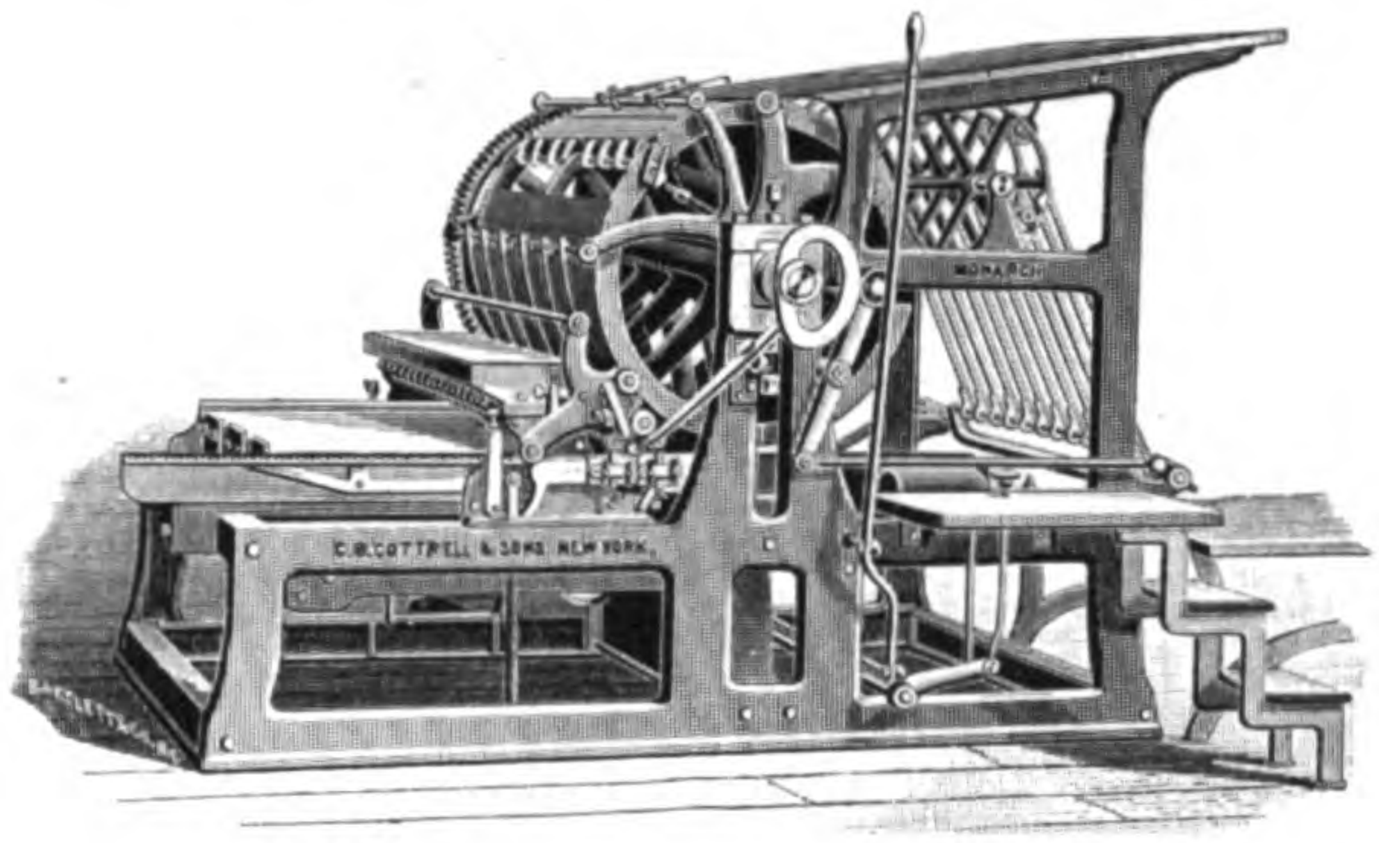
# COTTRELL MONARCH TWO-ROLLER PRESS.

**With Two Rollers Covering Form.**

**Air Springs.**
**Tapeless Delivery.**

**Back-Up Movement.**
**Hinged Roller-Frame.**



It has many advantages and improvements, including patent air springs, patent tapeless delivery, back-up movement, hinged roller-frame, and iron steps and feeder's stand, and in its manufacture quality is placed first and cost afterward.

It is a press of excellent design, of the best materials, and of high speed. By manufacturing them in large quantities, and building but two sizes, the price is put within the reach of the printer of moderate means.

It is a fast press—1600 per hour is easily possible on the larger and 2000 on the smaller size.

It has four bearings under the bed for extreme rigidity and strength, and steel tracks and steel rollers. There is a heavy flange on the ends of the cylinder as an added element of strength.

The patent air spring forms an easy cushion for the bed in passing the centers, is under perfect control, and can be readily adjusted for the different speeds. The air spring has a new automatic throw-off, so that in turning over the centers by hand the spring is not compressed.

The patent back-up movement is a great convenience and a labor-saver.

The patent hinged roller-frame permits the form rollers to be instantly uncovered for removal or other purposes without unscrewing the sockets. The rollers can be taken out and put back without changing their set.

The well fountain is used, being easily regulated and cleaned. It is set high, giving easy access to the form.

Furnished with table and rack and cam distribution at an extra charge, or only with rack and cam distribution as illustrated.

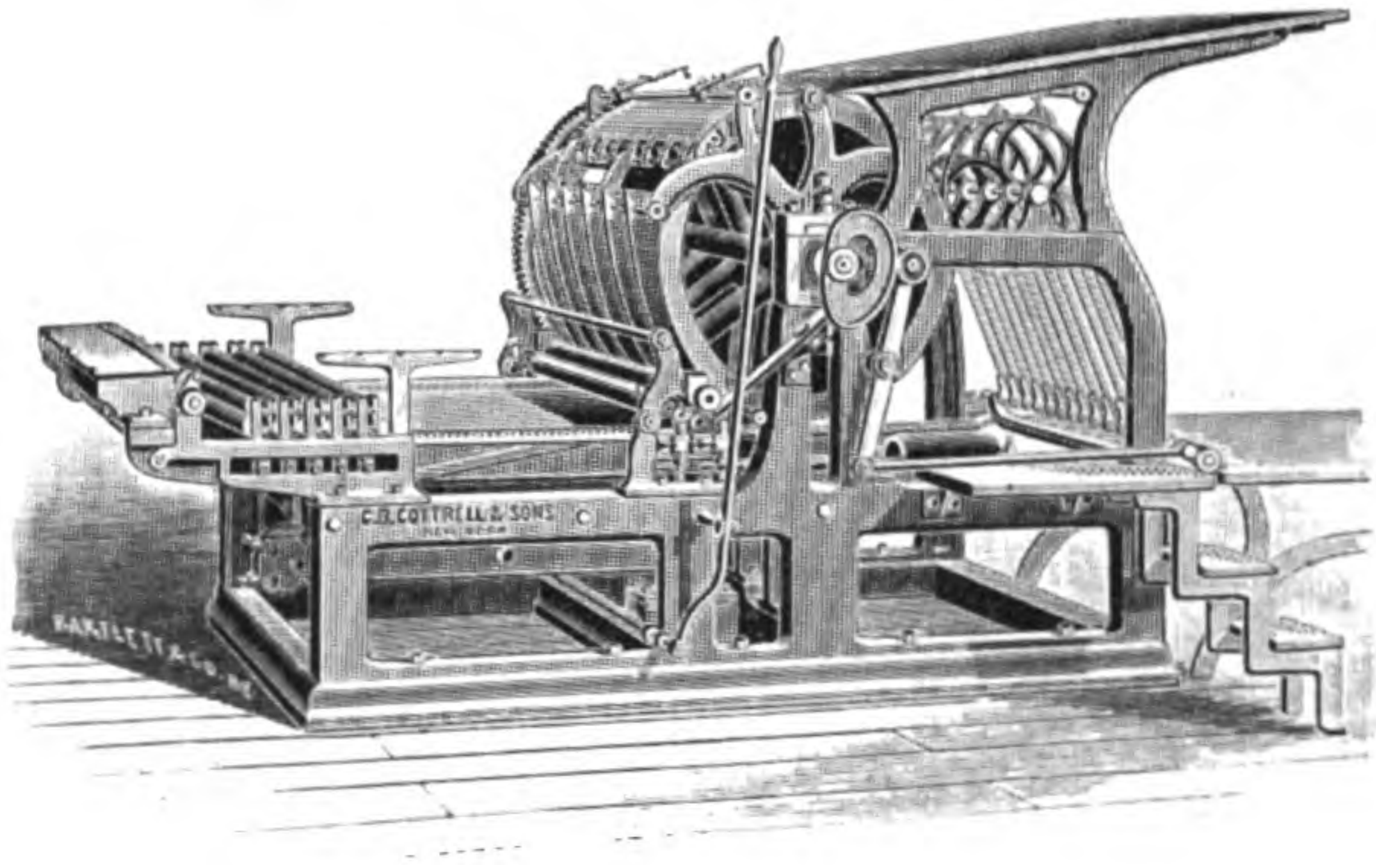
Price includes hard-packing or rubber blanket, wrenches, two sets of composition roller stocks, roller moulds, countershaft, two hangers, two four-speed cone pulleys and driving pulley, boxing and shipping.

# COTTRELL PARAGON JOB AND NEWSPAPER PRESS.

**With Two Rollers Covering a Full Form.**



The side frames rest upon and are fastened to a substantial bed-plate, thus insuring stiffness and rigidity of construction. The side frames are changed in design, the flanges projecting inward, and are massive in appearance.

The girt is cast solid with the bed-plate, and carries a pair of substantial rollers adjustable in their box bearings. These rollers operate in connection with extra steel tracks beneath the bed, which, with the ordinary ribs, sliders and tracks, form four separate bearings directly beneath the "impression," making any spring in the bed an impossibility.

The patent air spring, as applied to the press, forms an easy cushion for the bed in passing the centers, and can be readily adjusted for the different speeds.

In connection with the air spring is an automatic throw-off, which permits of the press being turned by hand without compressing the spring. This device is entirely automatic, and does not require any attention.

These presses are supplied with the well-fountain, placed high above the bed, to admit of easy access to the form. The roller frames are hinged in such a manner as to enable the pressman to open them in an instant, leaving the form rollers free for removal. The roller bearings are made adjustable in every direction.

The sheet delivery is tapeless, and fingers of the fly are adjustable transversely to suit position of delivery wheels and nature of sheet to be delivered. The ends of the cylinder are flanged to increase its rigidity.

The Paragon Press is supplied with table, rack and cam distribution, as illustrated on this page, at an extra charge, or with rack and cam distribution.

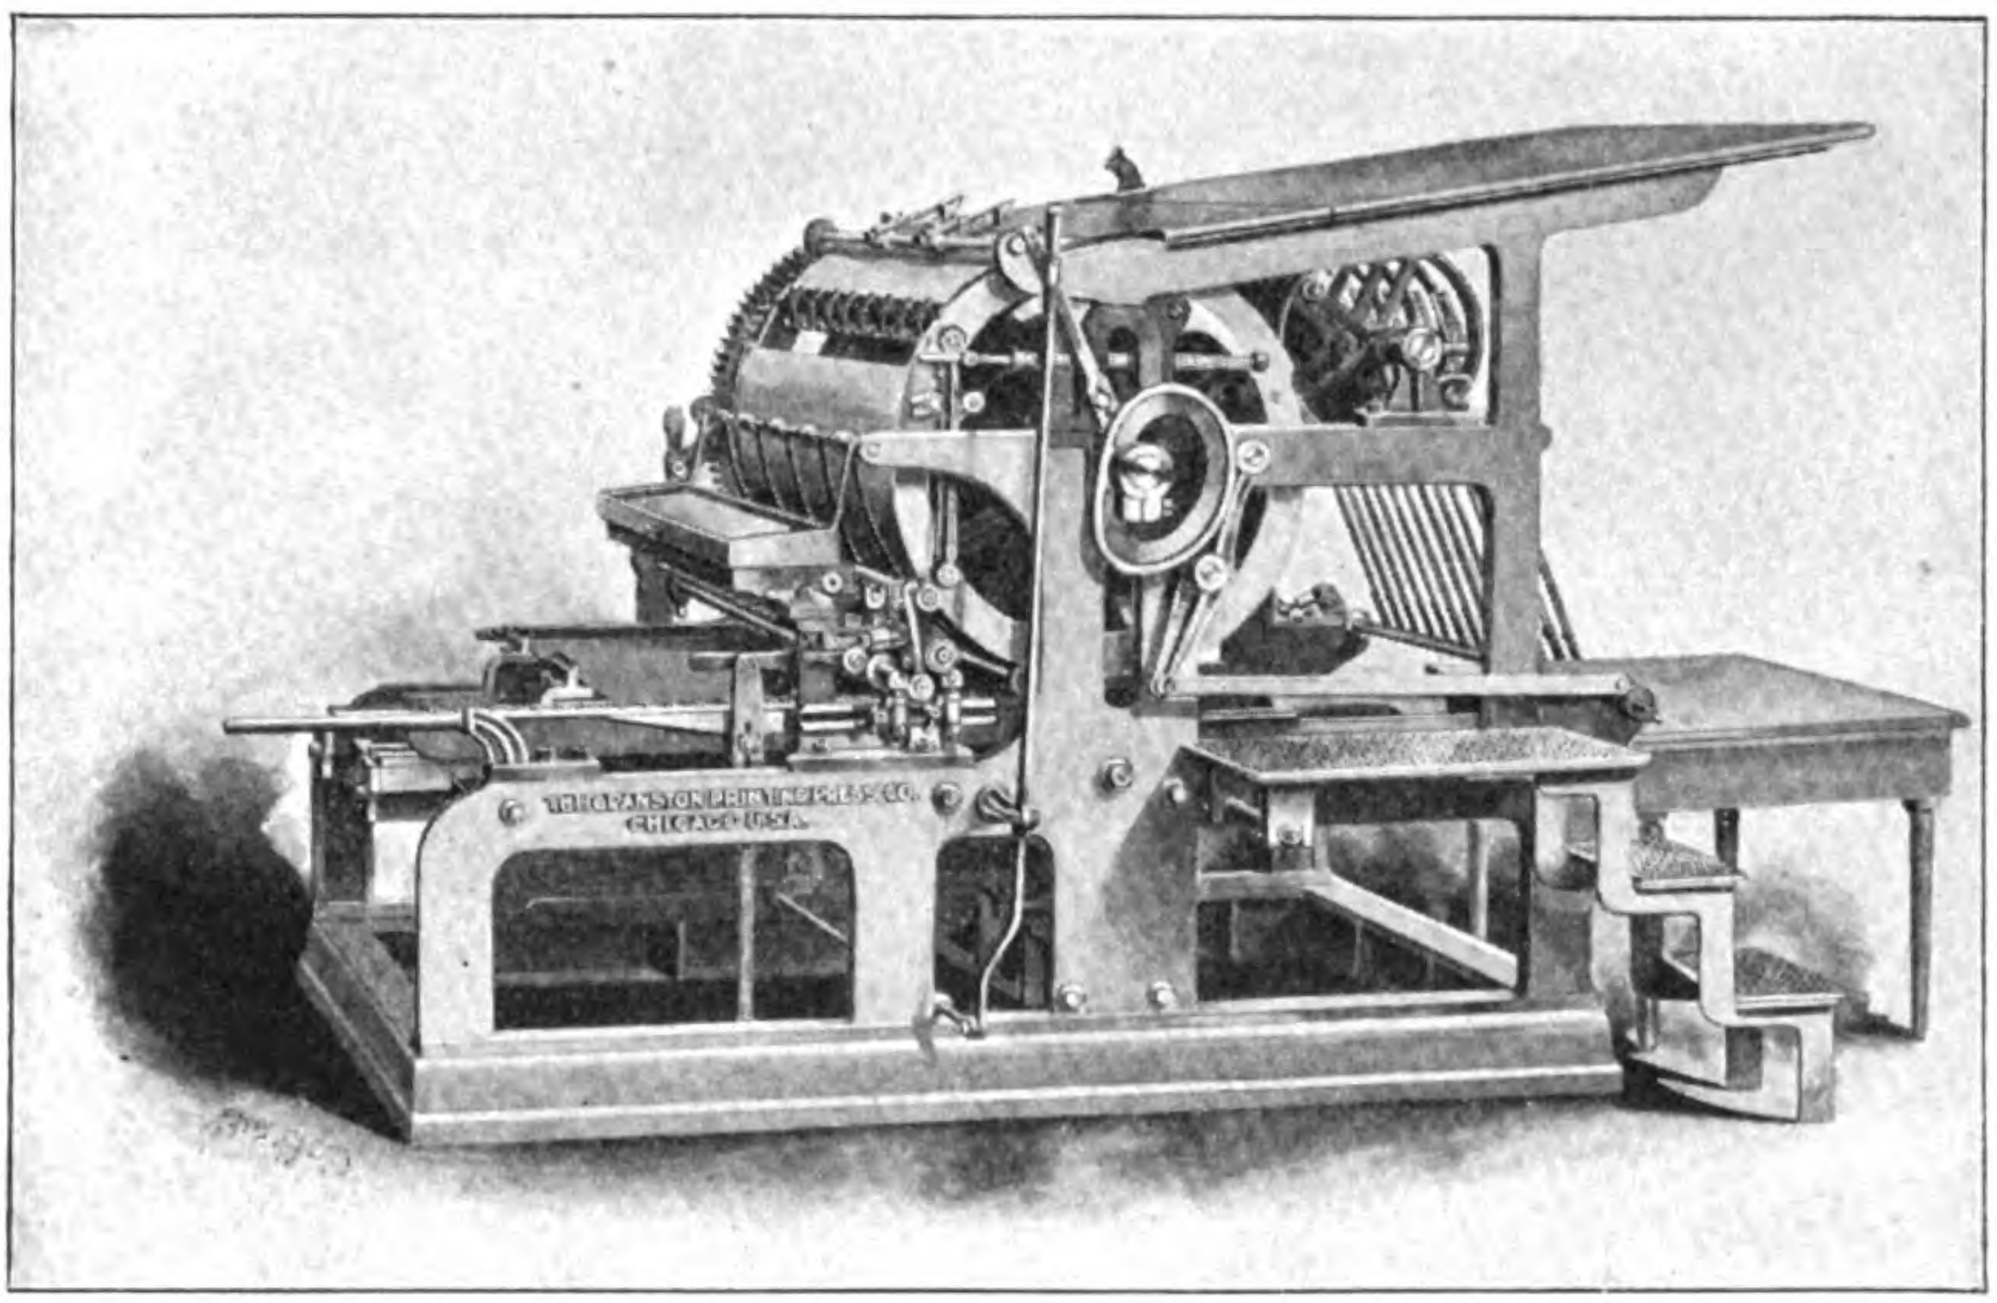
# THE CRANSTON PRESSES.

These presses have always been built on high-grade lines. The motto of the maker, painted conspicuously in the factory, "First learn to do a thing well, then learn to do it quickly," has been consistently carried out, and it can safely be affirmed that the Cranston presses are unexcelled in fine workmanship, true mechanical principles, and superior materials, all which result in durability, smoothness, and general satisfaction. The new series of 1897 have numerous up-to-date improvements, and some sizes have been changed for the better convenience of printers. The numerous users of Cranston presses will be more than pleased with the new series.

## THE CRANSTON NEWSPAPER PRESS.

**Two-Roller,**

**With Rack and Pinion Distribution.**



Built of the best material; furnished at a moderate price; put to practical tests;—it has proved by constant use to be an economical press to buy. The runners on both track and table are steel; the shafts, rolls, studs, shoes and wearing parts are also steel. All gears and racks are cut from the solid. The press is provided with air springs, tapeless delivery, noiseless gripper motion, continuous fly cam, adjustable feed guides. The fountain is placed high on the stand, thus giving easy access to bed of press. The form rolls are made of wrought iron pipe, and are of large size, easily placed in position and adjusted. There is a brake, a fountain cover, reel rod for blanket and tympan, and a guard for distributing rack. Distribution is controlled by cam movements.

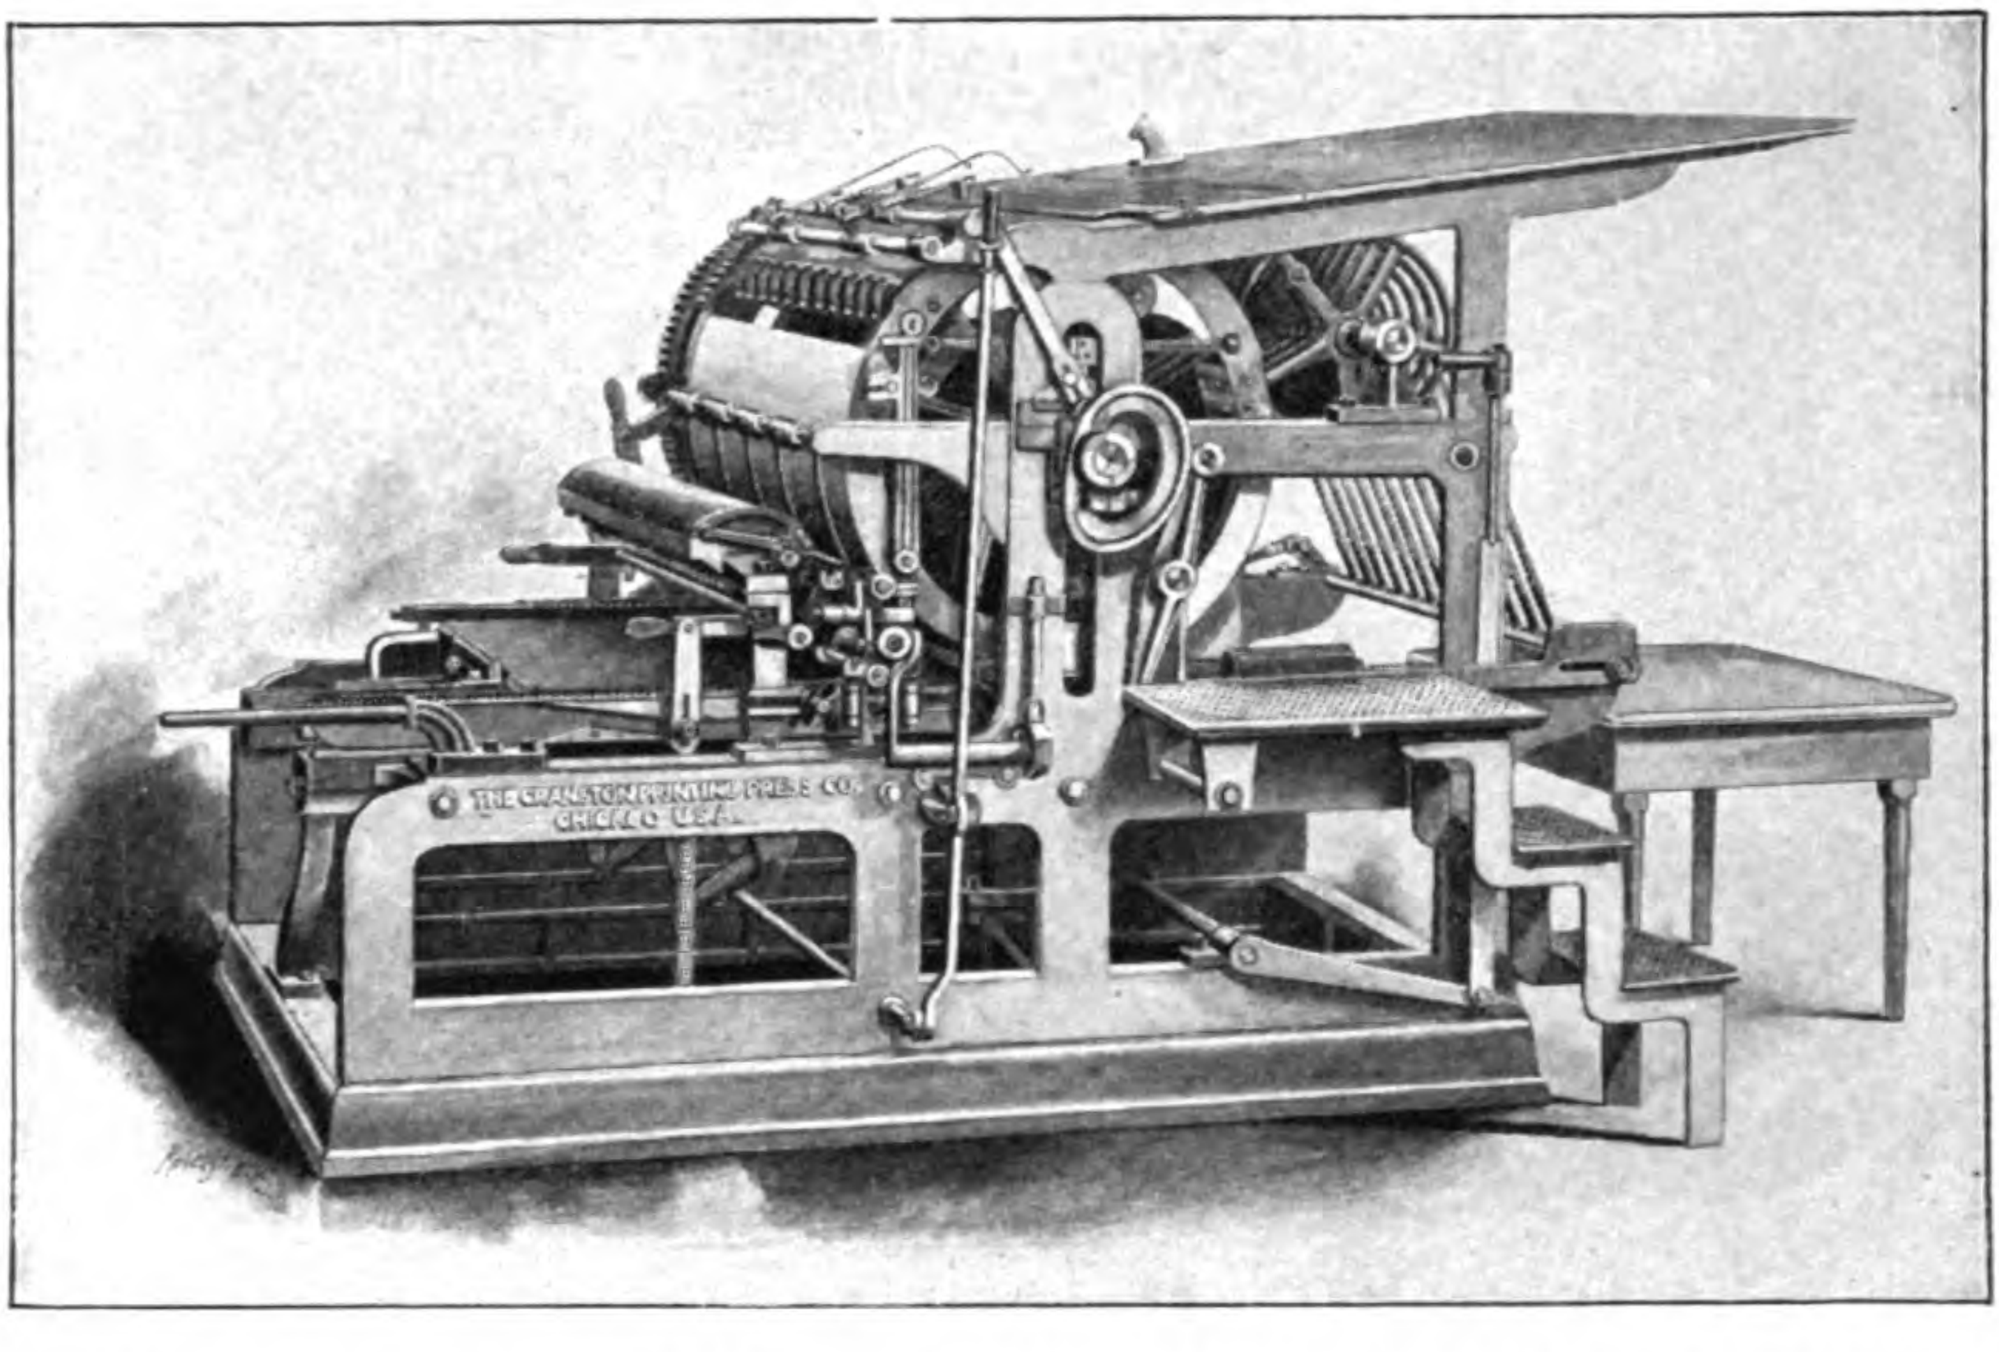
# THE CRANSTON PATENT IMPROVED TWO-ROLLER PRINTING PRESS.

**For Fine Book, Commercial and Newspaper Printing.**



This press is carefully made in every detail. The stock and finish are unexcelled. The tracks are wide, and provided with steel rolls and runners. The wearing parts—shafts, knuckles, shoes, studs—are of steel. The gears and racks are cut from the solid, and have wide faces. The press has air springs; patent silent slider motion, which insures uniform travel of the sliders with the table; patent stop and reversing motion; improved feed guides; patent adjustable side-guide leaf on feed table, which can be set for the greatest precision of register.

The fly is operated by a silent motion, the cam having a continuous surface.

The fountain basin is deep, and will carry a large supply of ink. It is placed high on the stands, and easy access is thus given to the bed of the press.

The Cranston combines the essential features: great strength, unyielding impression, fine distribution, exact register, with convenience in adjustments and make-ready. It is operated with light power, and cannot but give satisfaction both in quantity and quality of work produced.

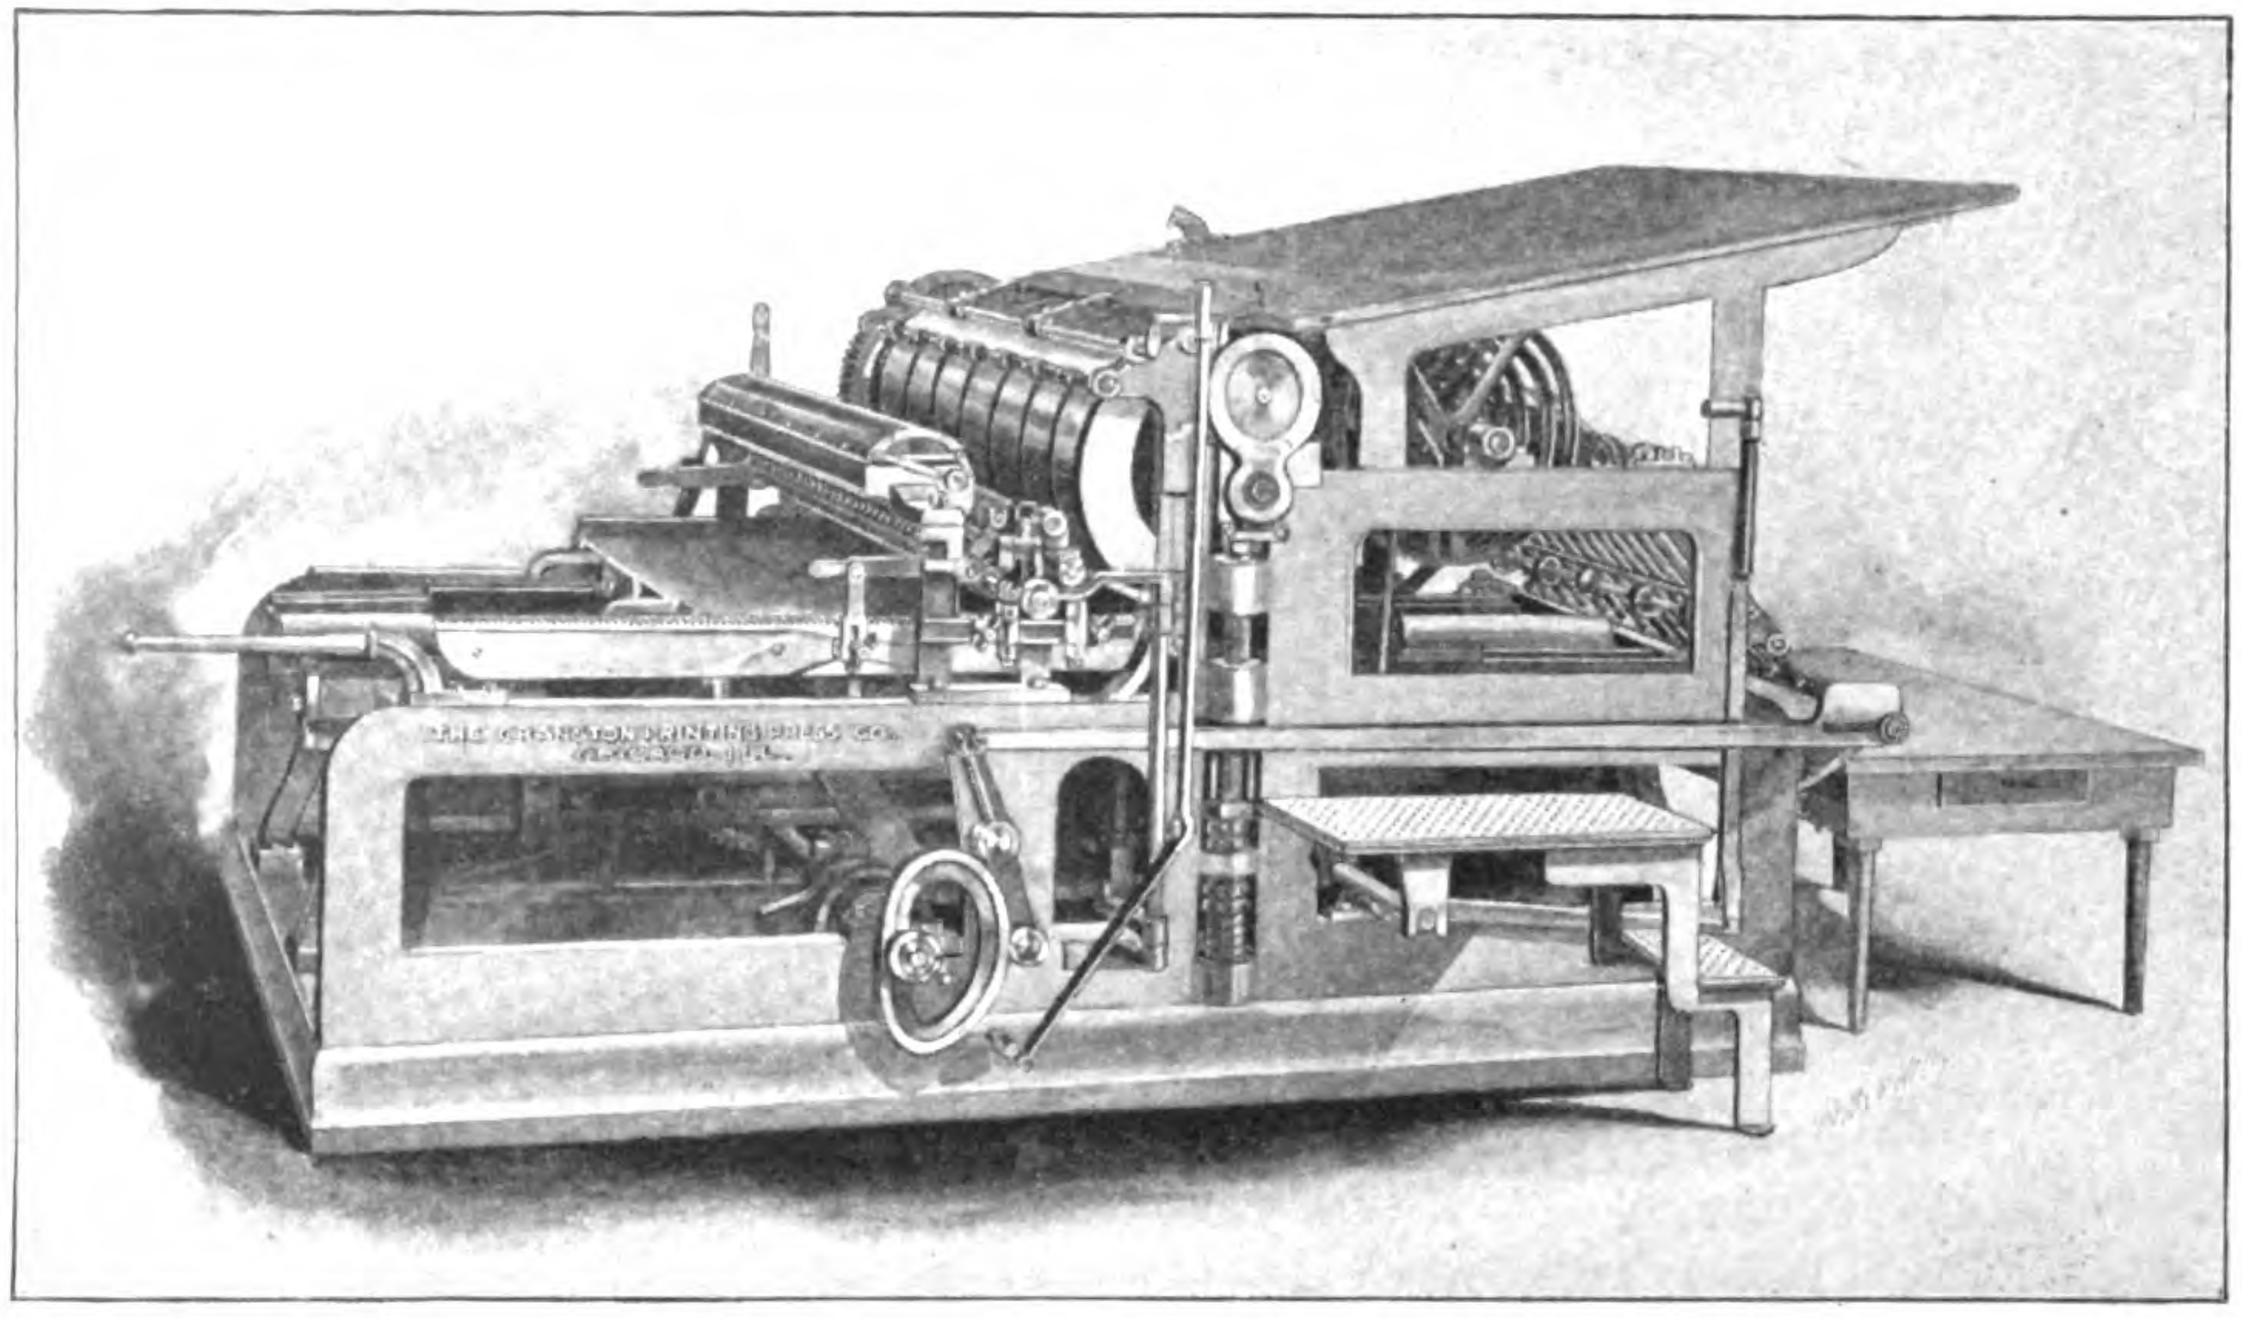
# THE CRANSTON-VICTOR TWO-REVOLUTION PRESS.

**Two-Roller.**



The track has wide runners, laid with steel. The table has three supports—two in the track, one on a center bearing placed on the girt—thus giving three continuous bearings through the line of impression without interference of a third track. Cylinder and lifting shafts, rolls, shoes, knuckles, are of steel. The smaller parts are built with a view to the greatest possible wear.

The mechanism for lifting the cylinder is simple, effective, and controlled by cam movements. No strain and no wear. Steel bearings.

The press has air springs; patent device for controlling motion of sliders; all gears and racks have wide faces, and are cut from the solid; distribution unfailing; large size form rollers, with bearings convenient and secure, easily placed in position and as easily removed; fly cam with continuous surface; deep fountain basin; arrangement for adjusting fountain roll; cover for fountain; adjustable bearers; hard-wood feed table; patent improved feed guides and side-guide leaf on feed table; patent stop and reversing motion; automatic leaf-lifting device for preventing the tongues or guides from catching and tearing the tympan while reversing press; arrangement for throwing reel wheels on or off while making ready.

The movements are all conveniently and easily adjusted, and positive in their action.

The speed of this press is all that can be obtained from any press of corresponding size and style.

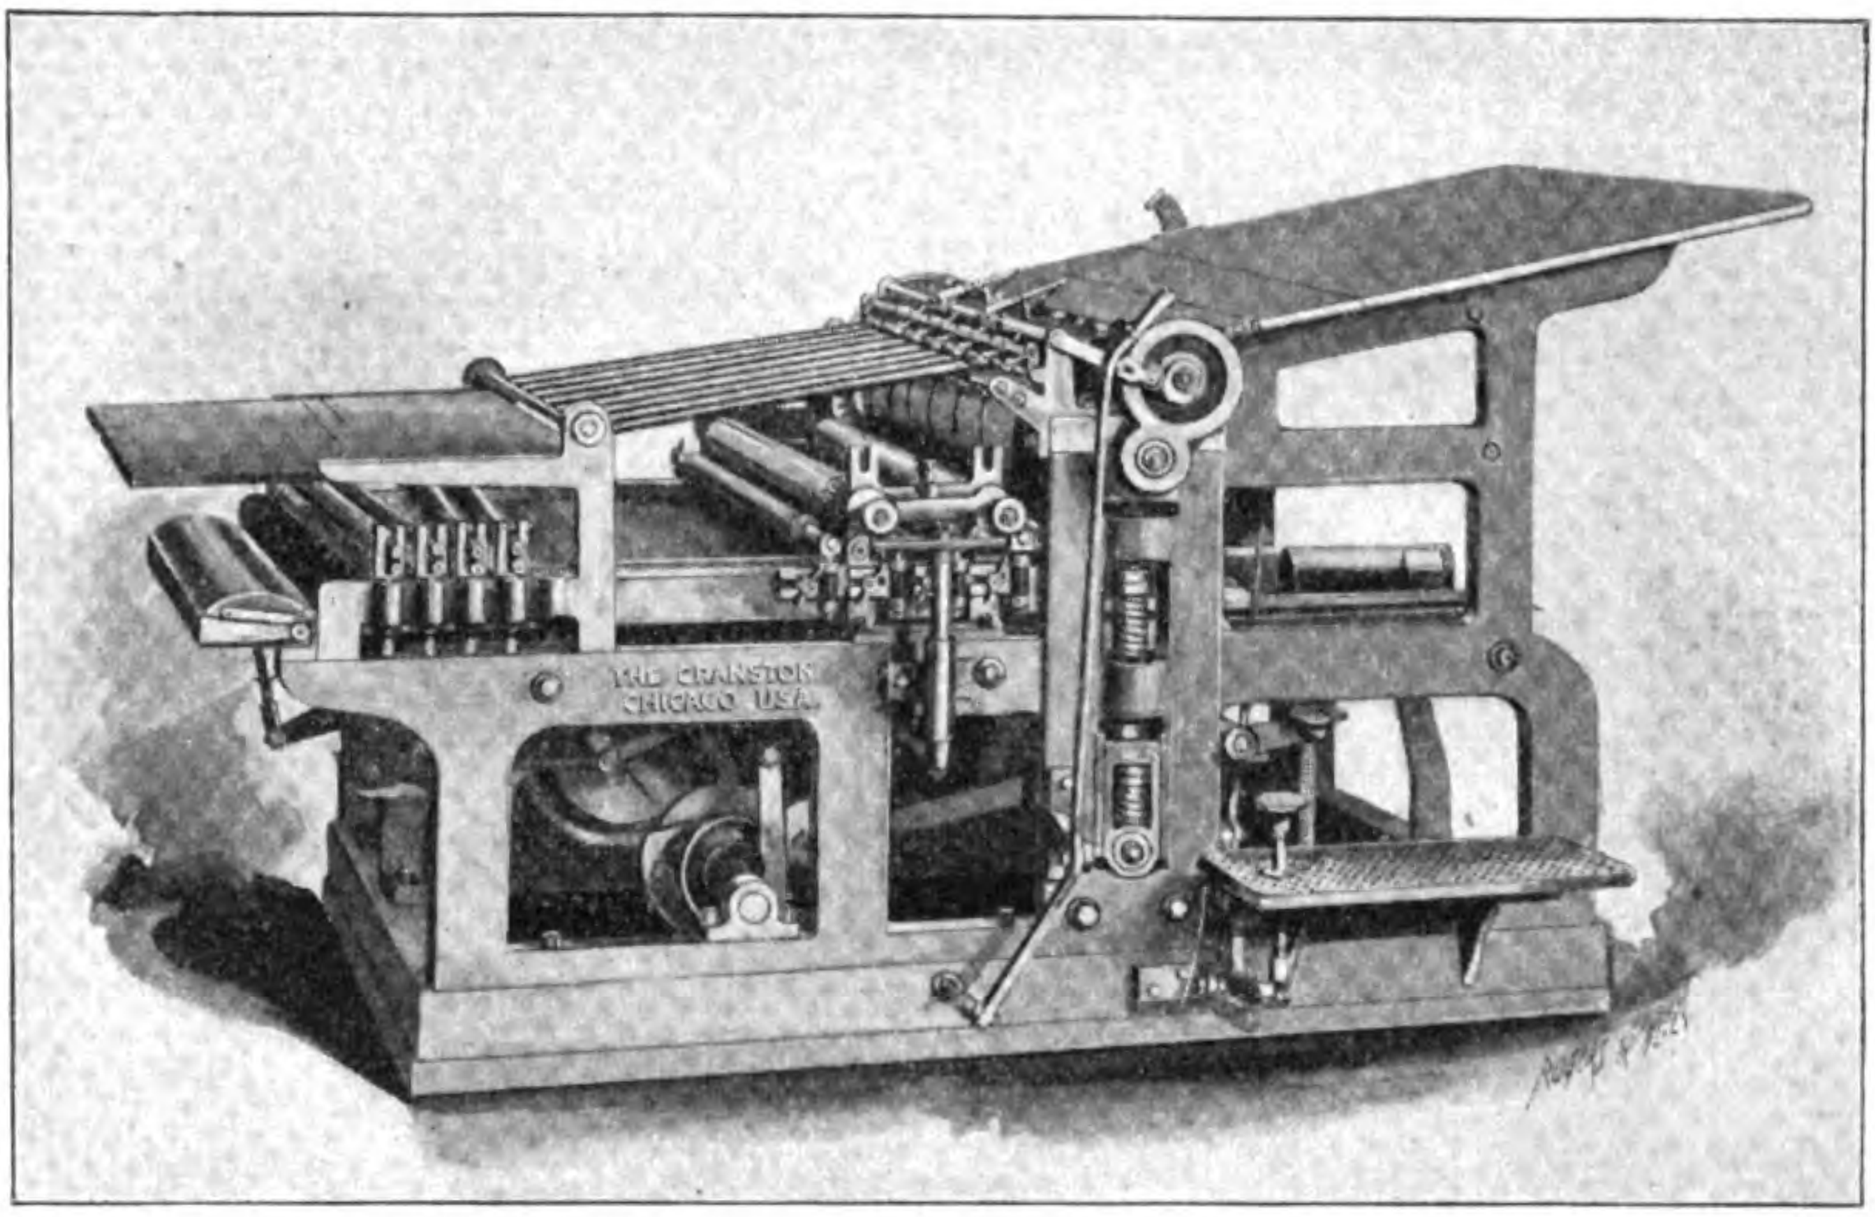
# THE CRANSTON-VICTOR COMMERCIAL PRESS.

**Two-Revolution, with Four Rollers.**



Various methods of engraving having been developed, and their utility practically demonstrated, the demand has been created for a press that will bring out delicate lines of half-tone, process, etched, photo-engraved plates, and work of this description, giving that clear and distinct impression without which the best results are not attainable from such plates. The new Victor Two-Revolution Four-Roller Commercial Press is especially designed for this class of work. Possessing as it does the patented features of our larger sizes, it is, like them, solidly constructed, giving an *unyielding impression* and an *ample inking surface*. Its size is convenient and sufficiently large to meet all demands for work of this class, while the speed provides for rapid production. Many features are embodied in this press for convenience in make-ready, etc. The distribution is a complete system, by means of which every particle of inking surface is *evenly* and *thoroughly* covered. The movements are easily adjusted and positive in their action. The cam has a continuous surface, and the sheets are laid lightly on the table without smut or off-set. Adjustable fly-fingers. The height of the press is such that it can be fed from the floor, and it is built with special reference to convenience in working about it. Its register is *faultless*. This press is the result of careful study, and embodies suggestions from practical printers regarding the requirements for printing this special work. The very satisfactory results obtained from those in use prove conclusively that the Victor will meet all requirements made upon it.

The speed is equal to all reasonable demands for fine printing.

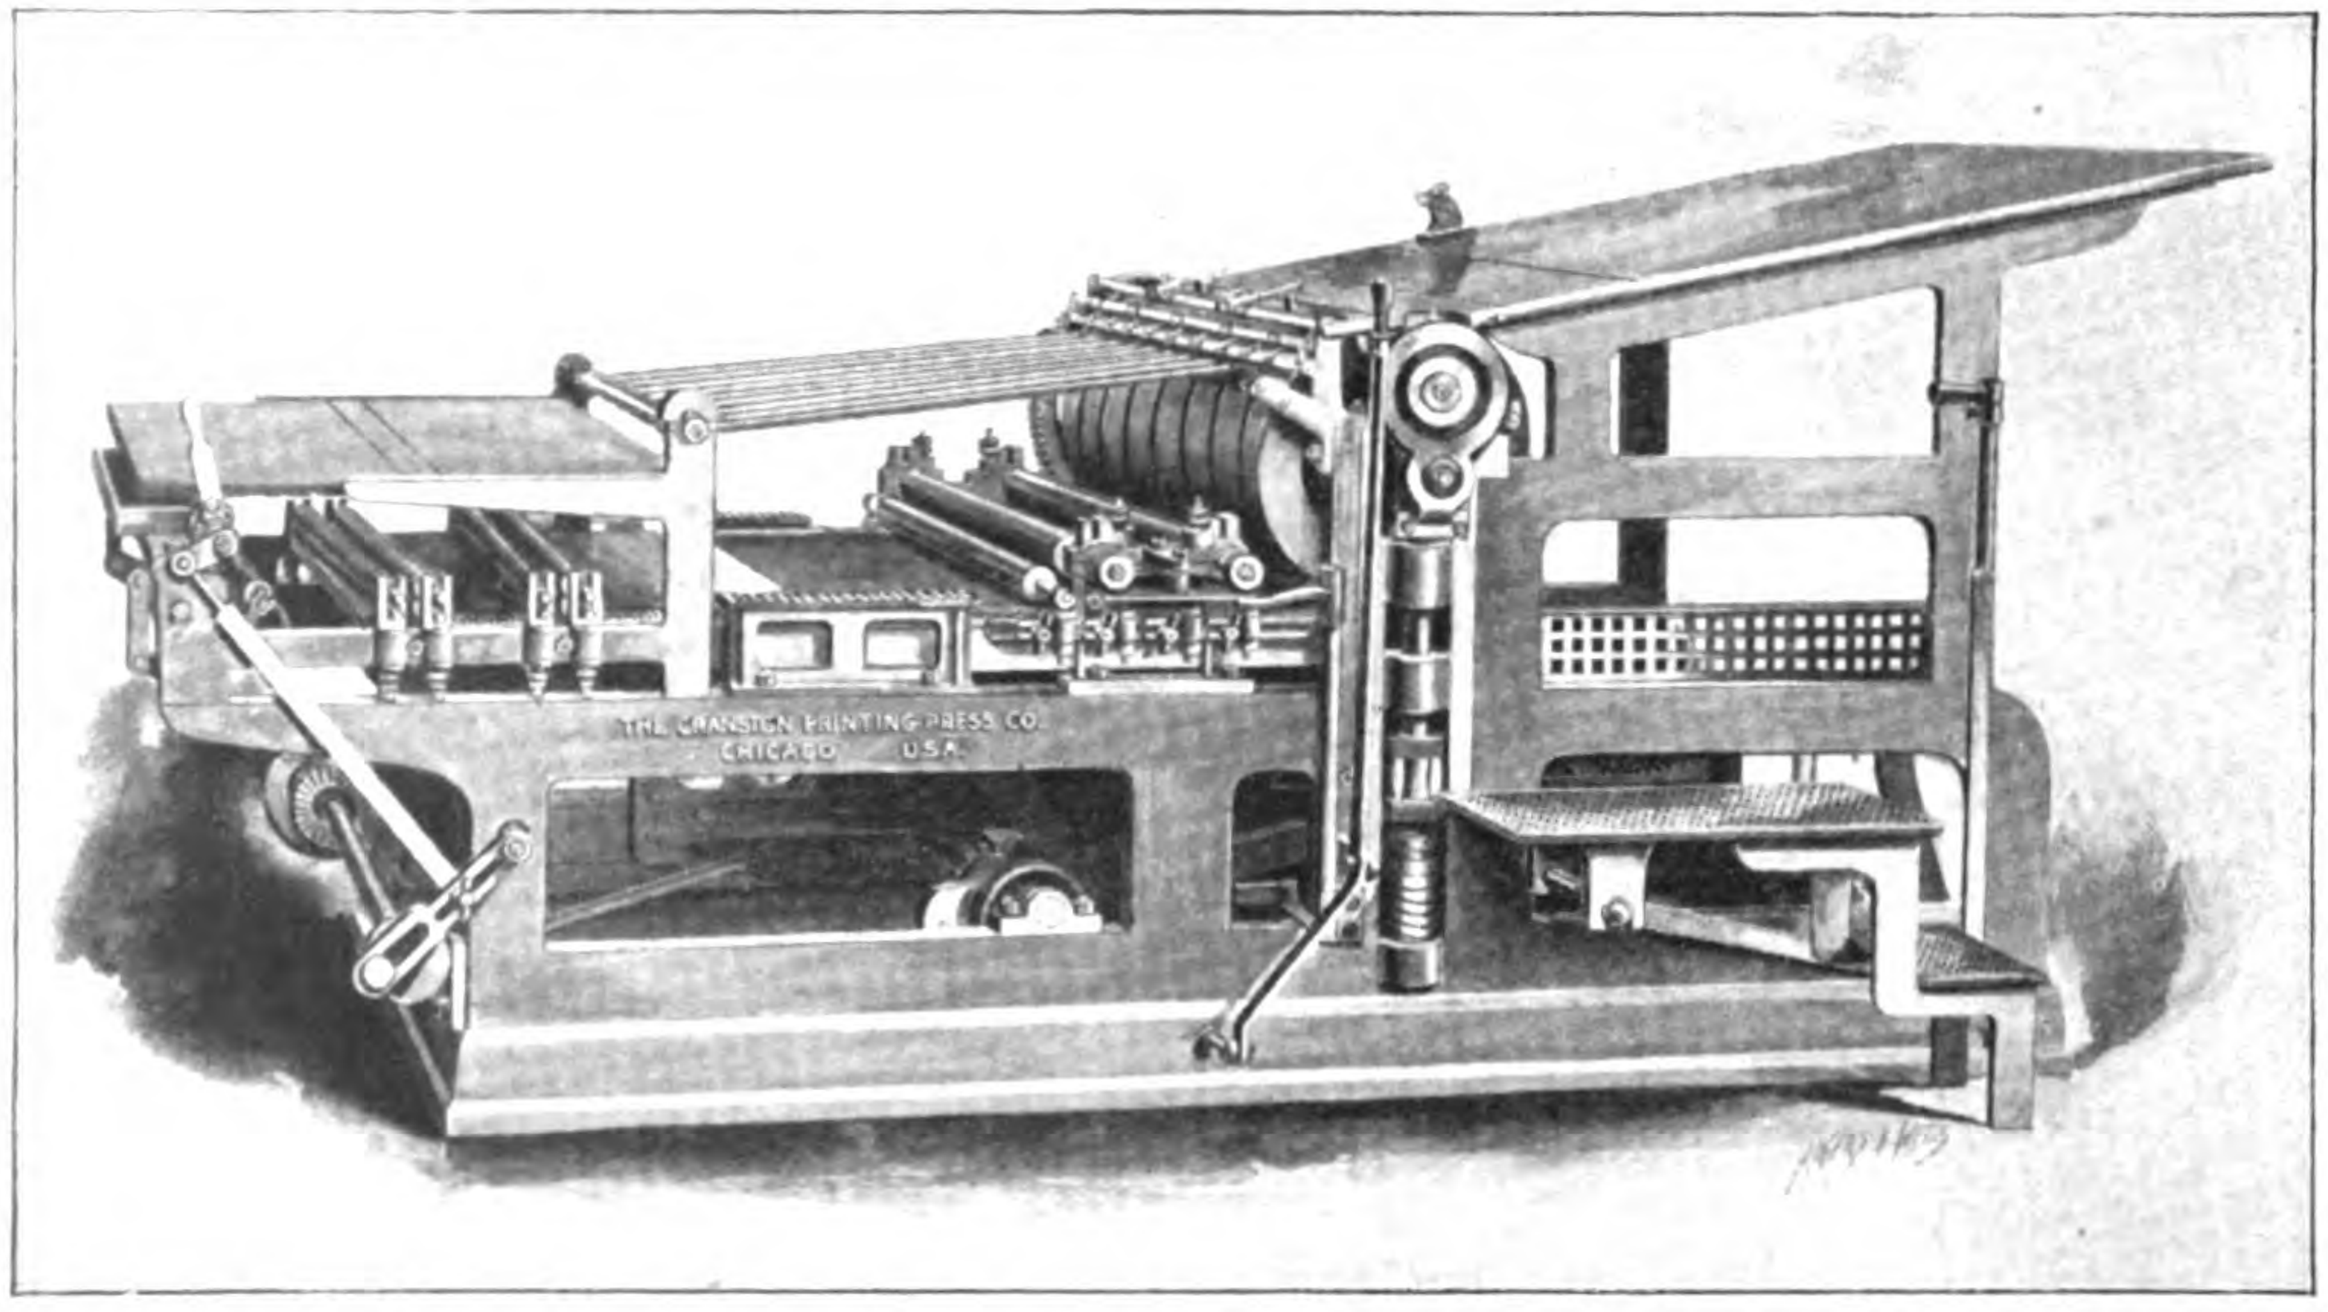
## A WISE PURCHASE.

The No. 2A Cranston-Victor Press is a money-maker. Fine job printing, from small circulars to any size within its capacity, can be done at high speed and with the finest results. In a printing establishment doing general work of all grades this press will prove exceedingly useful and profitable. Its construction and features are such that making ready can be done quickly. It takes in a great range of work which cannot be so profitably printed on a larger press.

# THE CRANSTON-VICTOR TWO-REVOLUTION PRESS.

**Four-Roller.**



The entire frame of the press is solid and compact. The tracks on both the table and runners are wide, laid with steel, and the rolls traversing on them are of the same material accurately gauged to size. The lifting mechanism for the cylinder is a direct cam motion, plain in construction, smooth running, operated with light power, requiring no weight. The shafts, cams, knuckles, studs, rolls, shoes, and all wearing parts, are of steel, and built with view of greatest possible resistance to wear. The shoes are securely fastened and doweled to the rack hangers. The cylinder has heavy flanges. The impression surface is strongly braced and supported. The press has hard-wood feed table; fly cam with continuous surface. Ample provision is made securing distribution and register.

This is a press that can be easily handled, with movements plain and direct in action, adjustments readily and conveniently made, resulting in the greatest economy of time and labor.

This press is provided with a trip, which may be thrown on or off at any point of the stroke of bed.

The reciprocating motion of the table is controlled by air springs which are simple and effective, having a plain valve which is in itself direct acting without any complicated attachments. The sheets are delivered to the fly by the tapeless delivery. The down-delivery attachment gives a positive and unfailing delivery of sheets on the fly table. As far as practicable on all our presses, the adjustments are made with thumb nuts. The sliders are attached to the table by our patent slider motion, and uniformity in travel is thereby insured. The patent feed guides and adjustable side-guide leaf on feed table can be adjusted with the utmost precision without leaving the feeder's platform. Reel wheels are readily thrown on or off while making ready. The patent stop and reversing motion enables the feeder to stop the press instantly at any desired point, and run it backward, thereby effecting economy of time and labor, as he has absolute control of the press without leaving his position. The automatic leaf-lifting device prevents the tongues or guides from catching or tearing the tympan while reversing press.

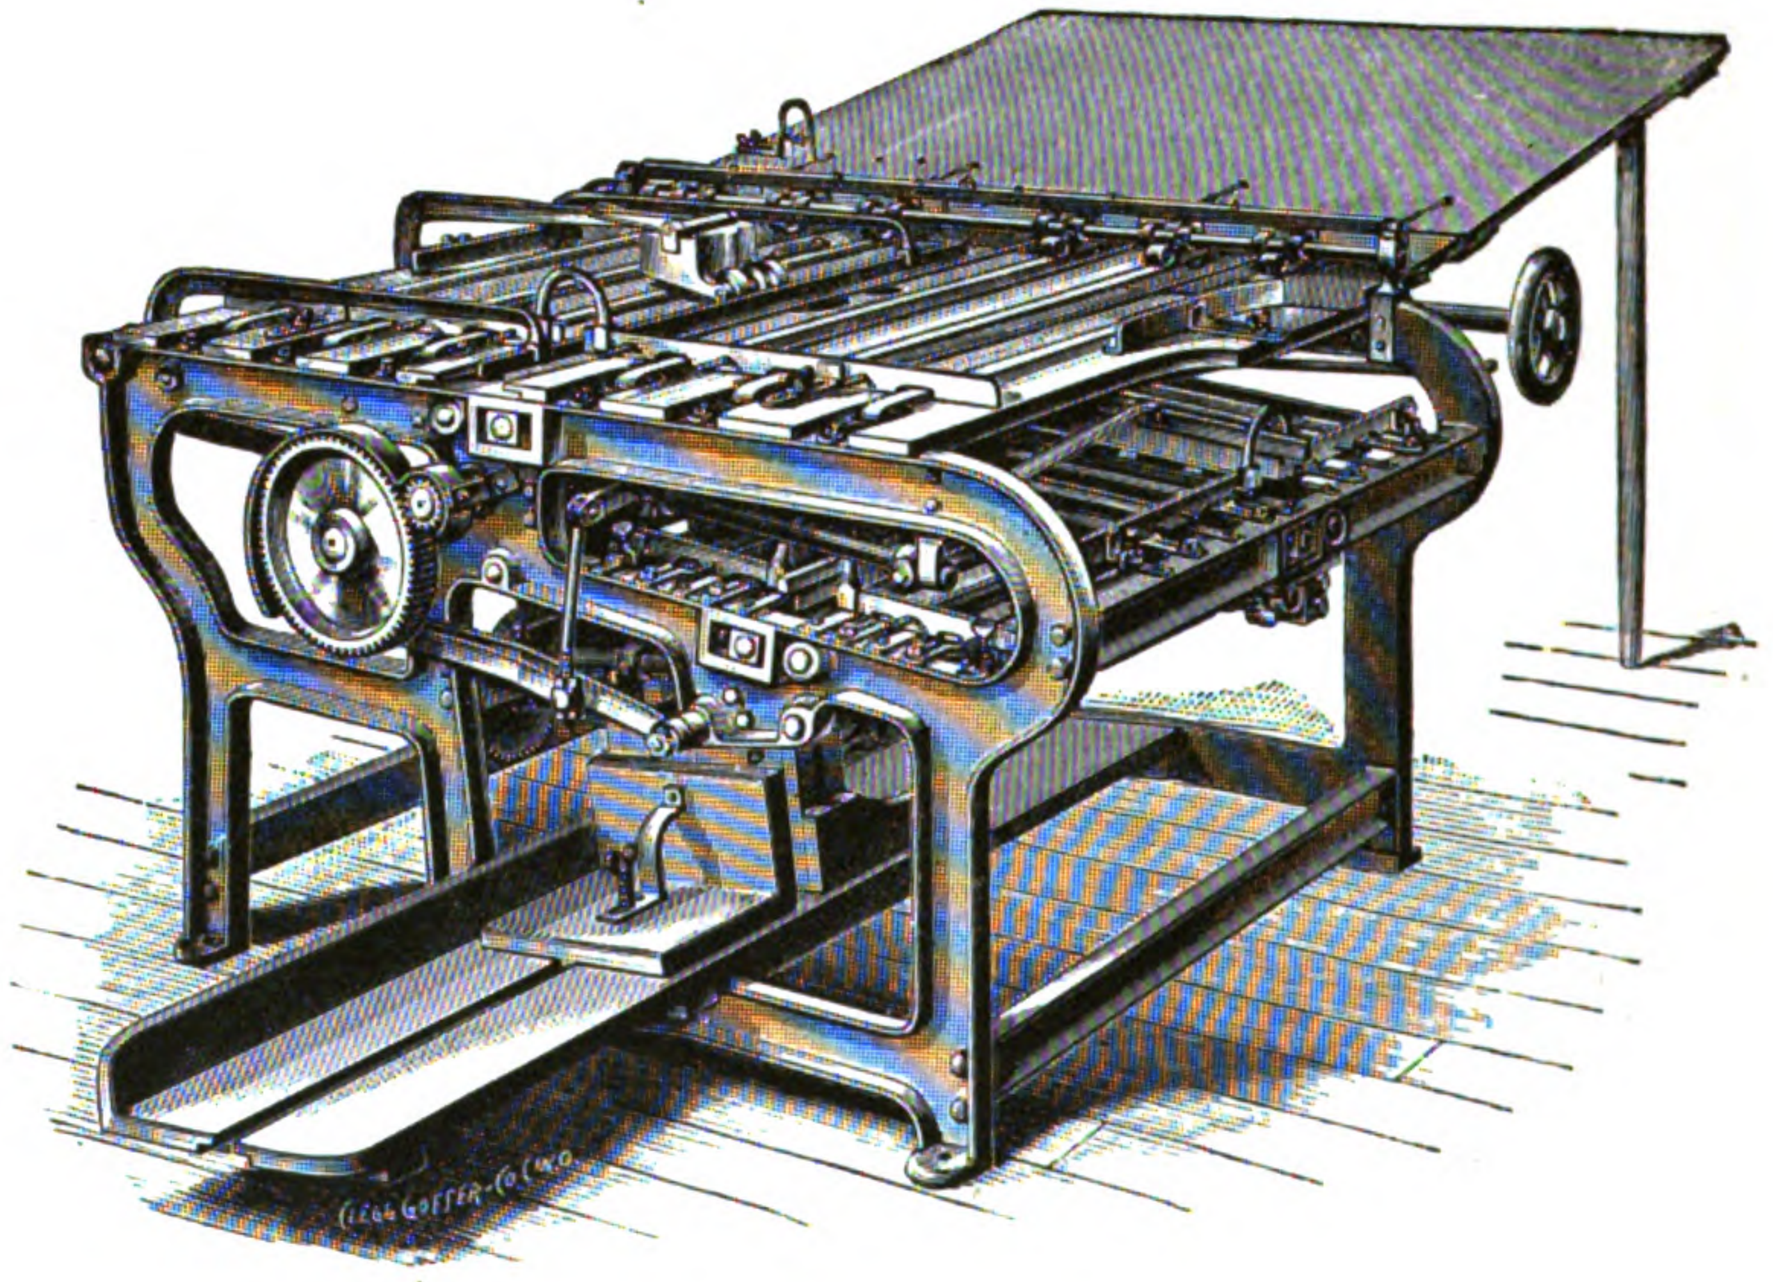
# TRIBUNE NEWSPAPER FOLDER.

**All Iron Frame.**
**Working Parts Steel and Iron.**
**All Movements Positive.**
**No Sprocket Chains.**
**No Lost Motion.**



This is a folder of the highest grade of construction and efficiency, without a superior for its purpose on the market, and sold at such moderate net prices as to make so-called "cheap" folders highly expensive in comparison—durability and reliability considered. It has no makeshift devices. It folds on the same principle as the high-grade book machines. The simplest folder made.

Made in one size only, 36×48 inches, which takes in any size sheet, whether folio or quarto, from 22×32 to 36×48 inches.

Paster and trimmer can be furnished at time of purchase or added afterward.

Made with three- and four-fold deliveries. Three-fold work is delivered in a receiving box, while four-fold work is delivered in a packer, as shown in illustration.

In the hands of a competent operator it will fold ordinary sixteen- and thirty-two-page work.

Weight about 900 pounds. Power required, about one-tenth of one horse power. Speed, 3000 folio or quarto sheets per hour.

## LIST PRICES.

| | |
|---|---|
| For hand feed | $400 00 |
| Paster and trimmer (no extra charge for this when insetting or covering attachment is ordered) | 25 00 |

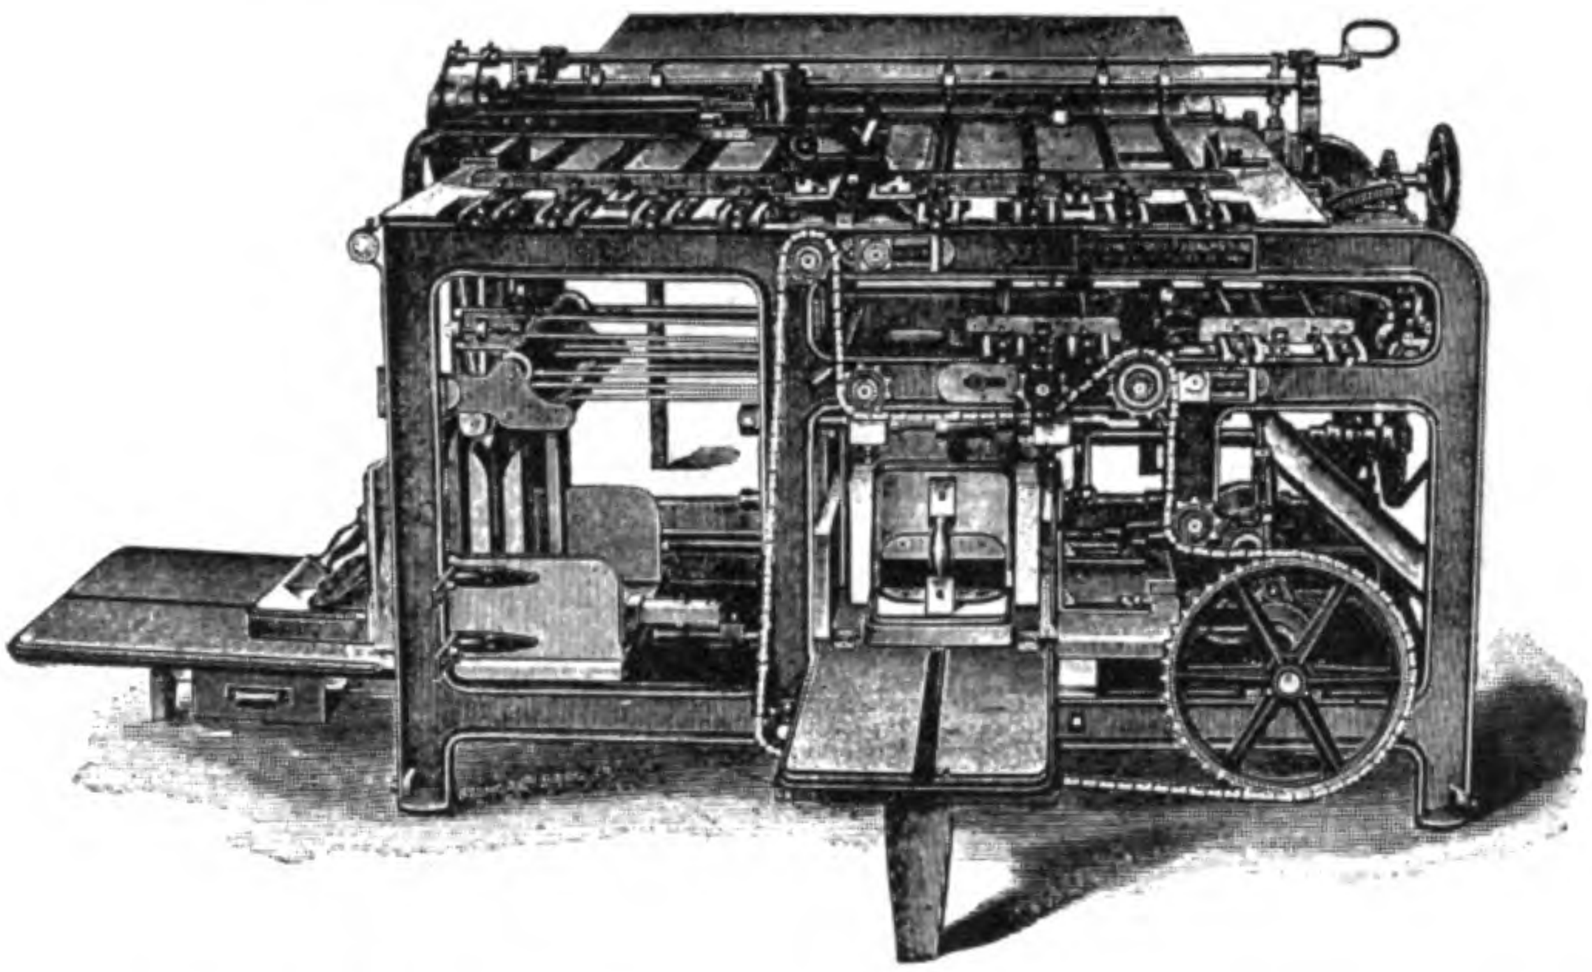
## TRIBUNE NEWSPAPER FOLDER.
## LIST PRICES—Continued.

**Insetting Attachment,** inserts a two-page or four-page sheet or supplement between the fourth and fifth pages of a publication, folding either ten or twelve pages and pasting and trimming the entire publication; net . . . . . **$100 00** extra.

**Covering Attachment,** outsets two pages upon eight pages, making a ten-page publication; or outsets a four-page cover or supplement upon eight pages, making a twelve-page publication. It pastes and trims. Net . . . . . **100 00** extra.

**The net price of this thoroughly reliable and durable Folder is very little more than asked for inferior affairs which in the end will prove to be most expensive and least satisfactory. This Folder is made to do perfect work for many years.**

## UNIQUE IRON-FRAME FOLDER.



Built by the maker of the Bennett Economical Folder, shown on following page, to overcome the objections to wood-frame folders.

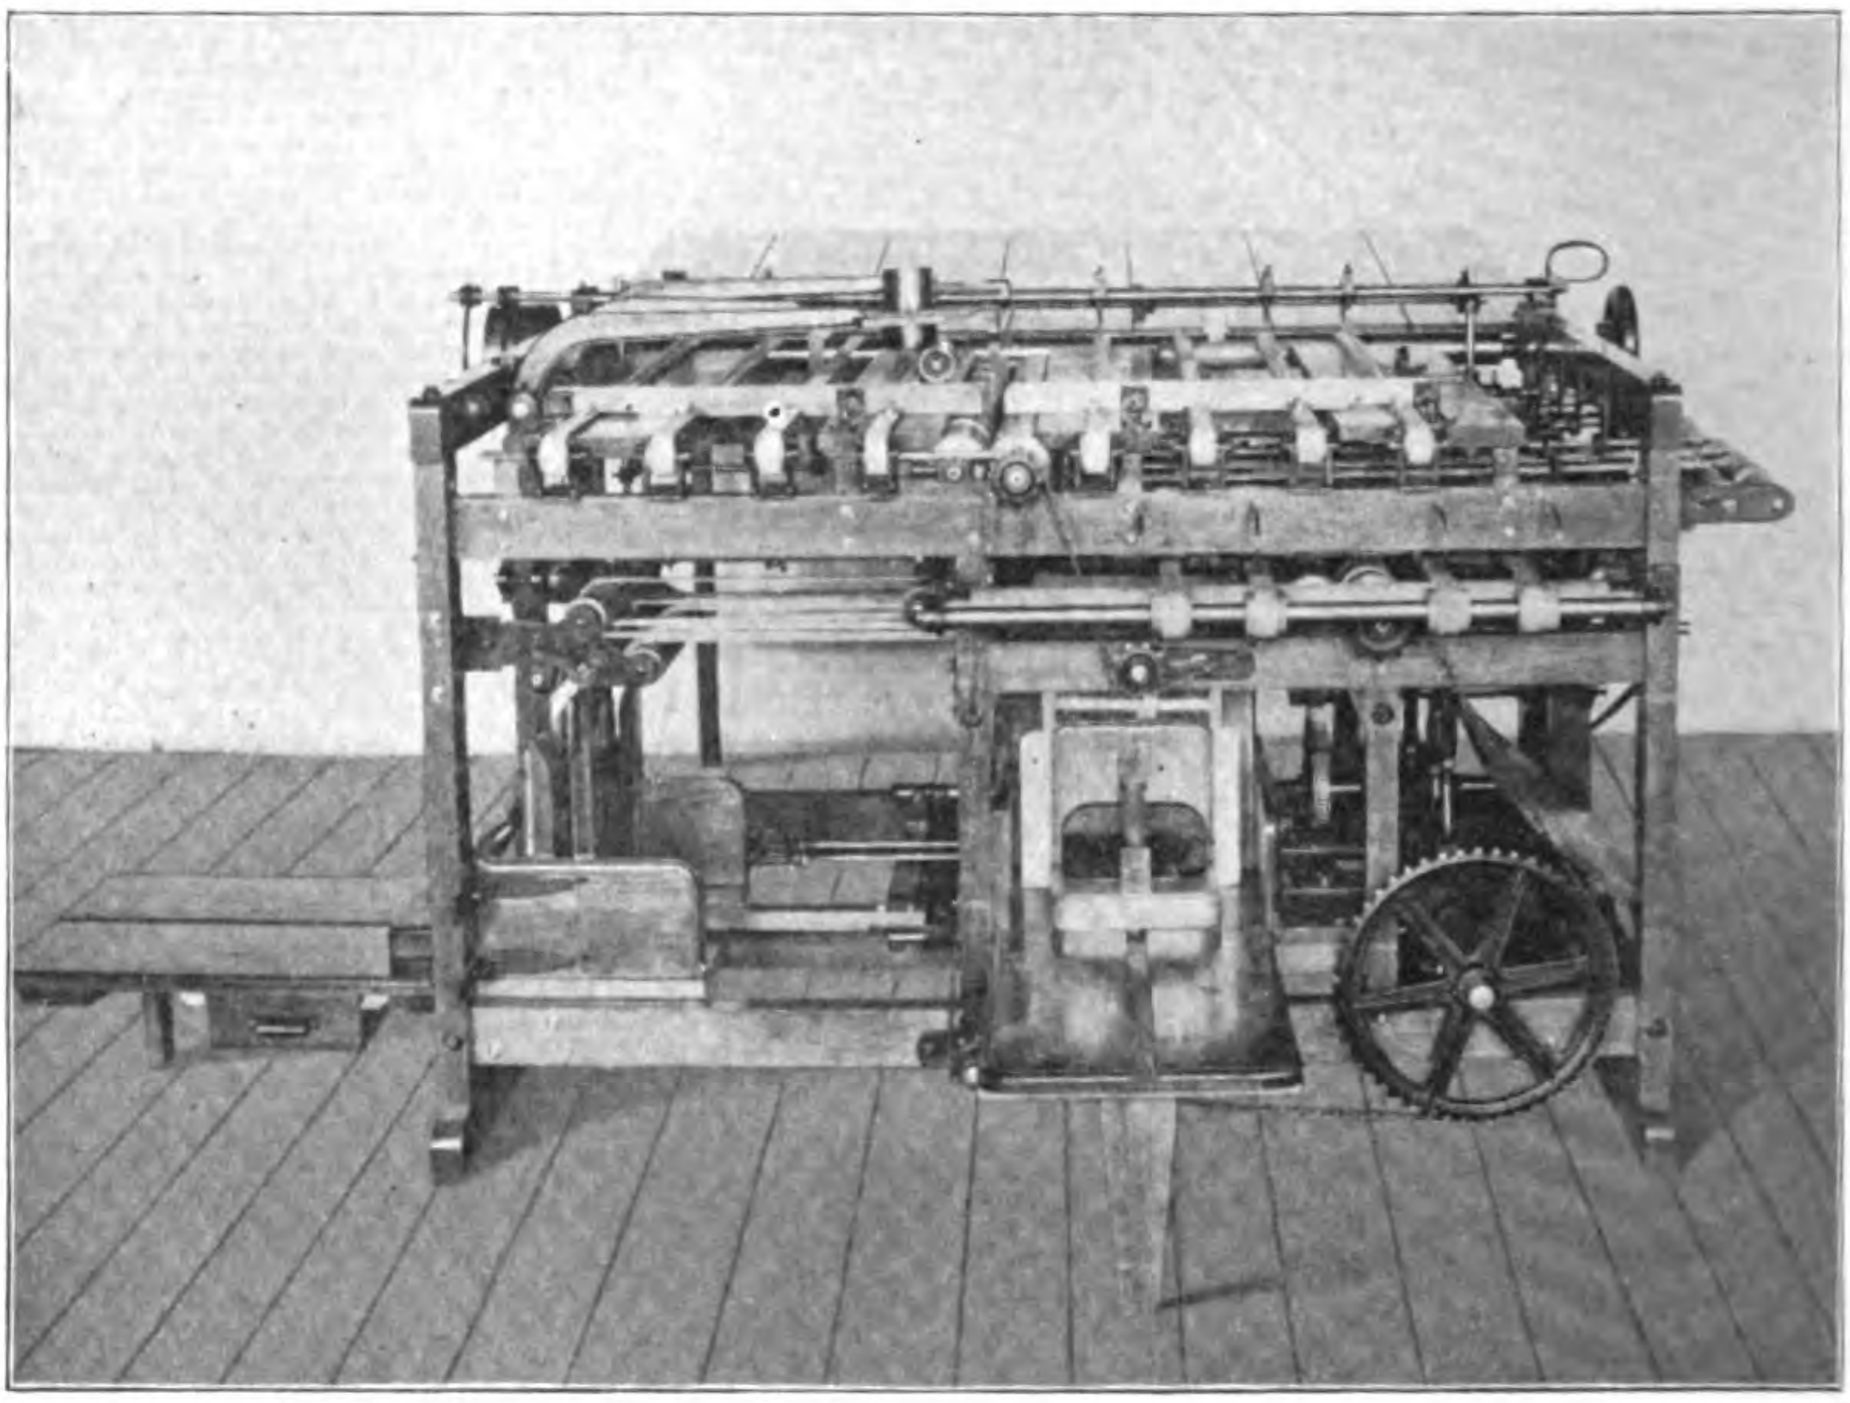
# BENNETT ECONOMICAL FOLDER.



Has a strong, wooden frame, with working parts of iron. Delivers at third and fourth folds, and can be changed without stopping machine. Has pasting and trimming attachment for eight (8) page work. Built in hand-feed, or attachable to any cylinder press, front or back delivery. All journals are of tool steel, with journal boxes three diameters long, hung in self-adjusting pivot hangers, making it possible to remove any fold roll, driving or rock shaft in a few moments and replace in line, and there is not a gear on the machine but can be reached conveniently and removed easily. All adjustments are made by screw, each tape tightened independently, and drop of fold blades can be regulated by the "turnbuckle" adjustment to one-hundredth of an inch. There are side guides to insure accuracy in folding, whether a sheet comes from a press or feed-board.

No extra charge for press fixtures in attachable machines, except for front-delivery press.

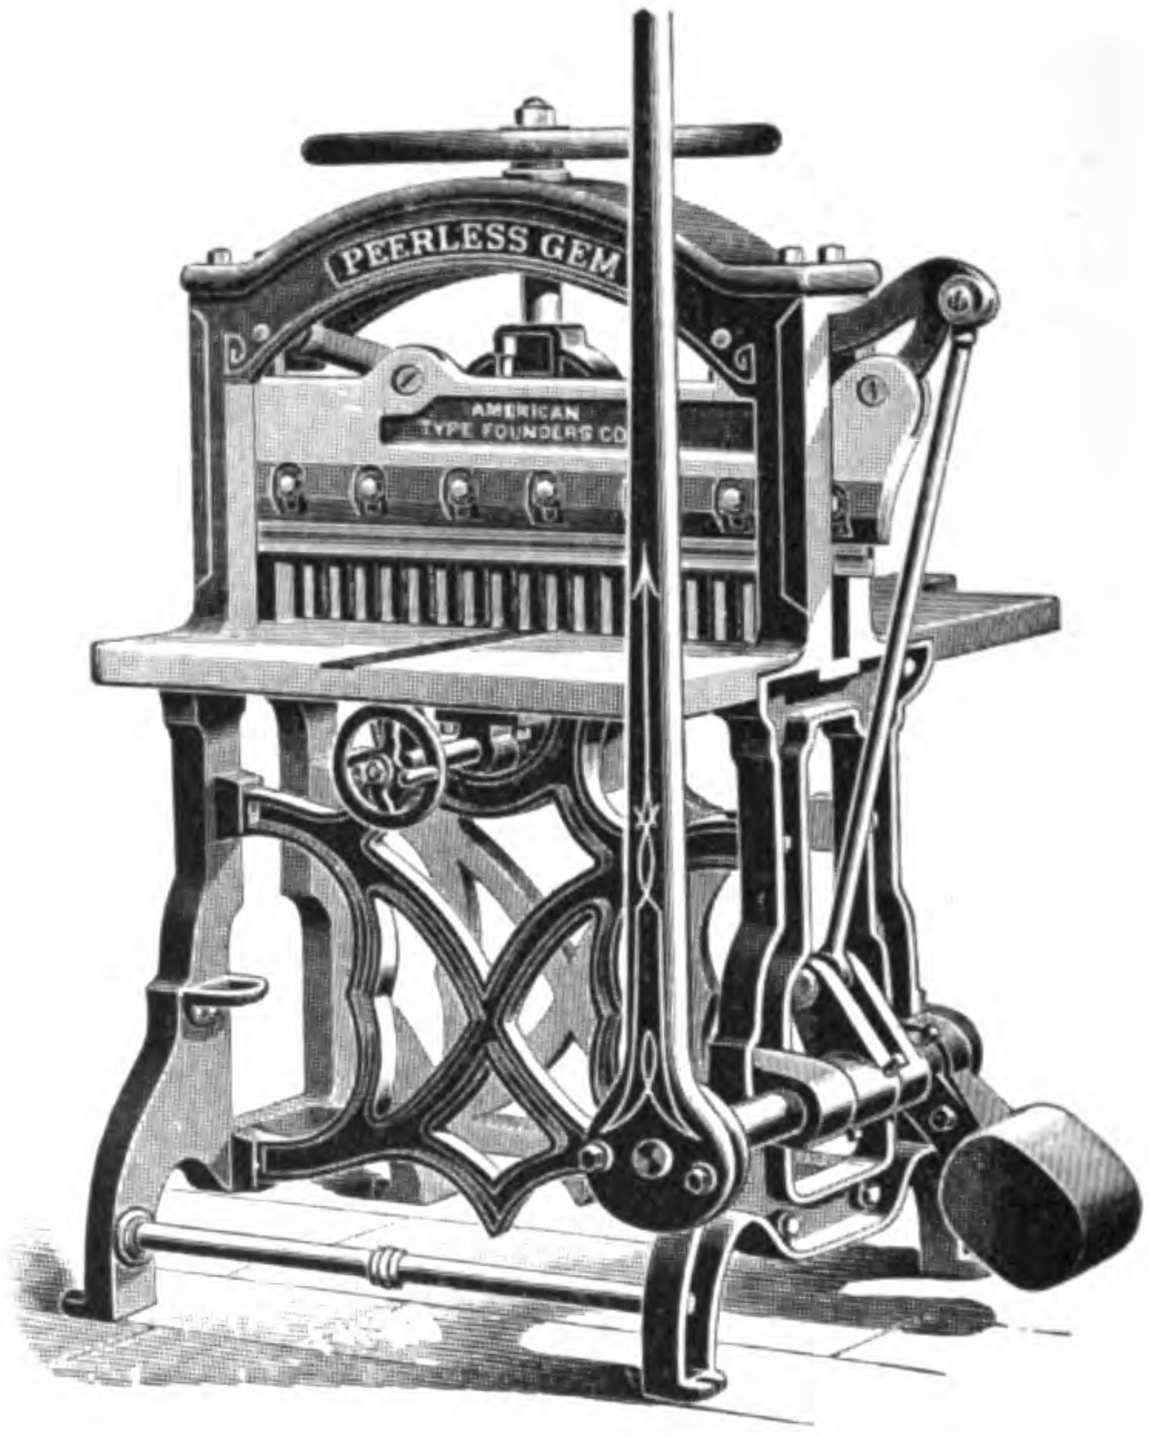
## PEERLESS GEM PAPER CUTTERS.



This illustrates the 30- and 32-inch Peerless Gem Paper Cutter, except that the balance weight is now hung inside the frame as shown in cuts of 23-inch size on next page.

Superior in every detail and in the leverage, cutting with greater ease to operator, and returning from cut with the least possible exertion, owing to their perfect balance. The frame is stronger, heavier and better braced; the knife thicker and deeper, insuring a truer cut and longer life; the lever is adjustable; the balance weight is now hung inside the frame, thus saving floor room. There are split back gauges, side gauges, and a front enameled measuring gauge. Unexcelled in construction, materials used, and finish.

Compare details of construction given below with those on other cutters.

## 25-INCH PEERLESS GEM CUTTER.

Excels all other cutters of its size in weight, ease of cut, strength, durability and finish. It is built on the same design as the Peerless Gem in all points, except that the lever is fixed on the shaft instead of being adjustable. The weight is 825 pounds, unboxed; has 4½ × ⅜-inch knife; 1¾-inch knife bar. The best money's worth ever offered in a 25-inch paper cutter.

The leverage both while cutting and returning is perfect, reducing the exertion of cutting to a minimum.

The balance weight is hung inside the frame to save floor space.

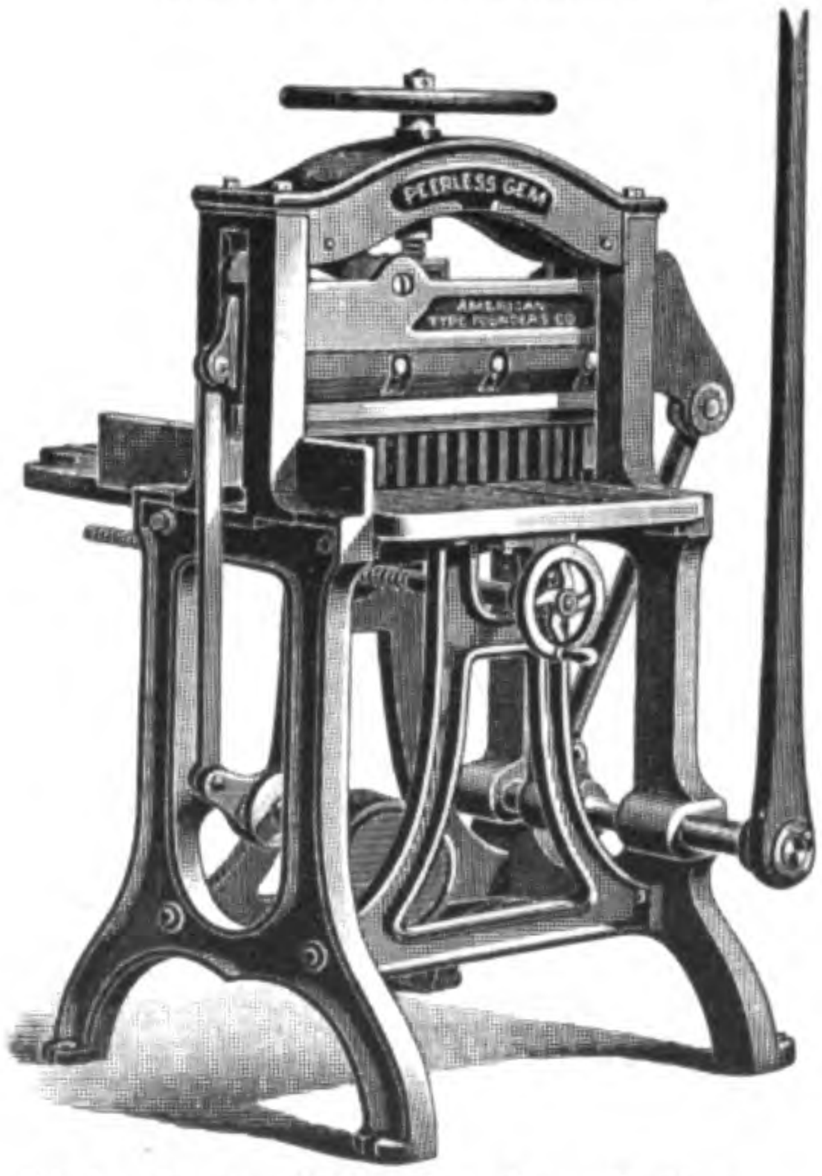
## 23-INCH PEERLESS GEM CUTTER.



Style of 23-inch Peerless Gem Cutter.

No other cutter of this size, or about this size, equals the new 23-inch cutter. It weighs 725 pounds, unboxed; has 4½ × ⅜-inch knife, and 1¾-inch knife bar. Built on the Peerless-Gem principle, it has leverage of maximum power and easy return, and all the features of the 25-inch Peerless Gem Cutter. It is not possible to build a better cutter for the money asked.

The balance weight is hung inside the frame, thus saving floor space and removing an annoying obstruction.

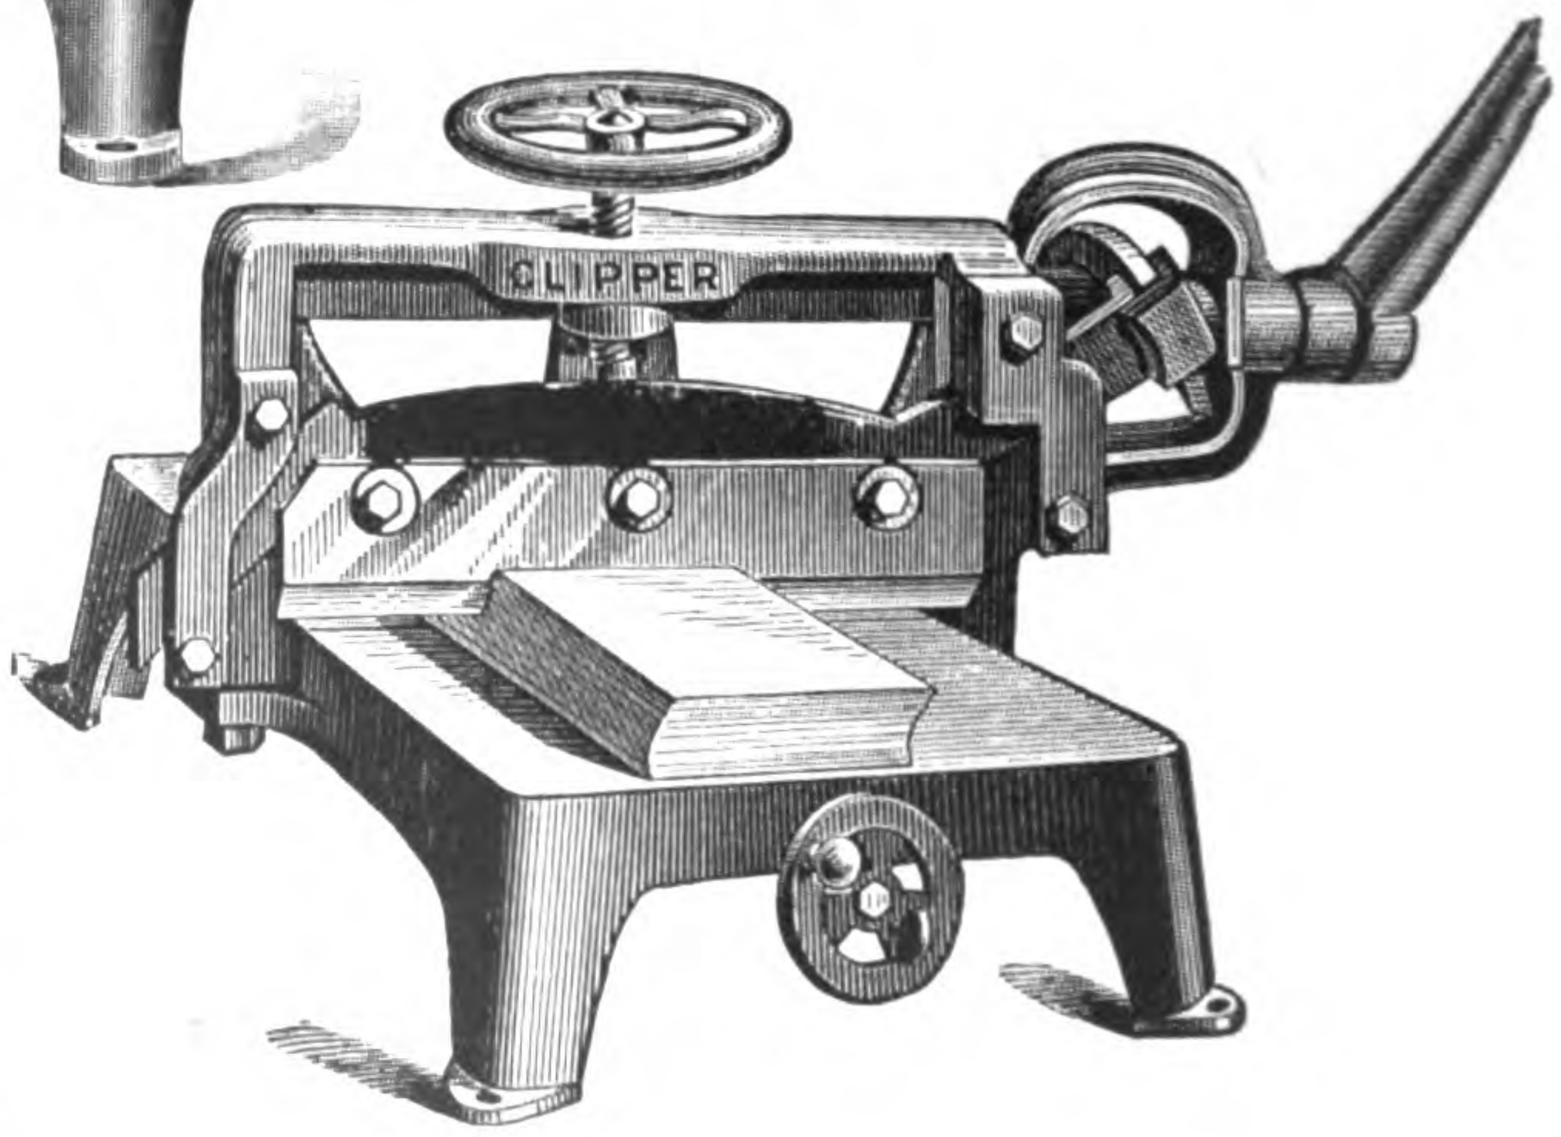
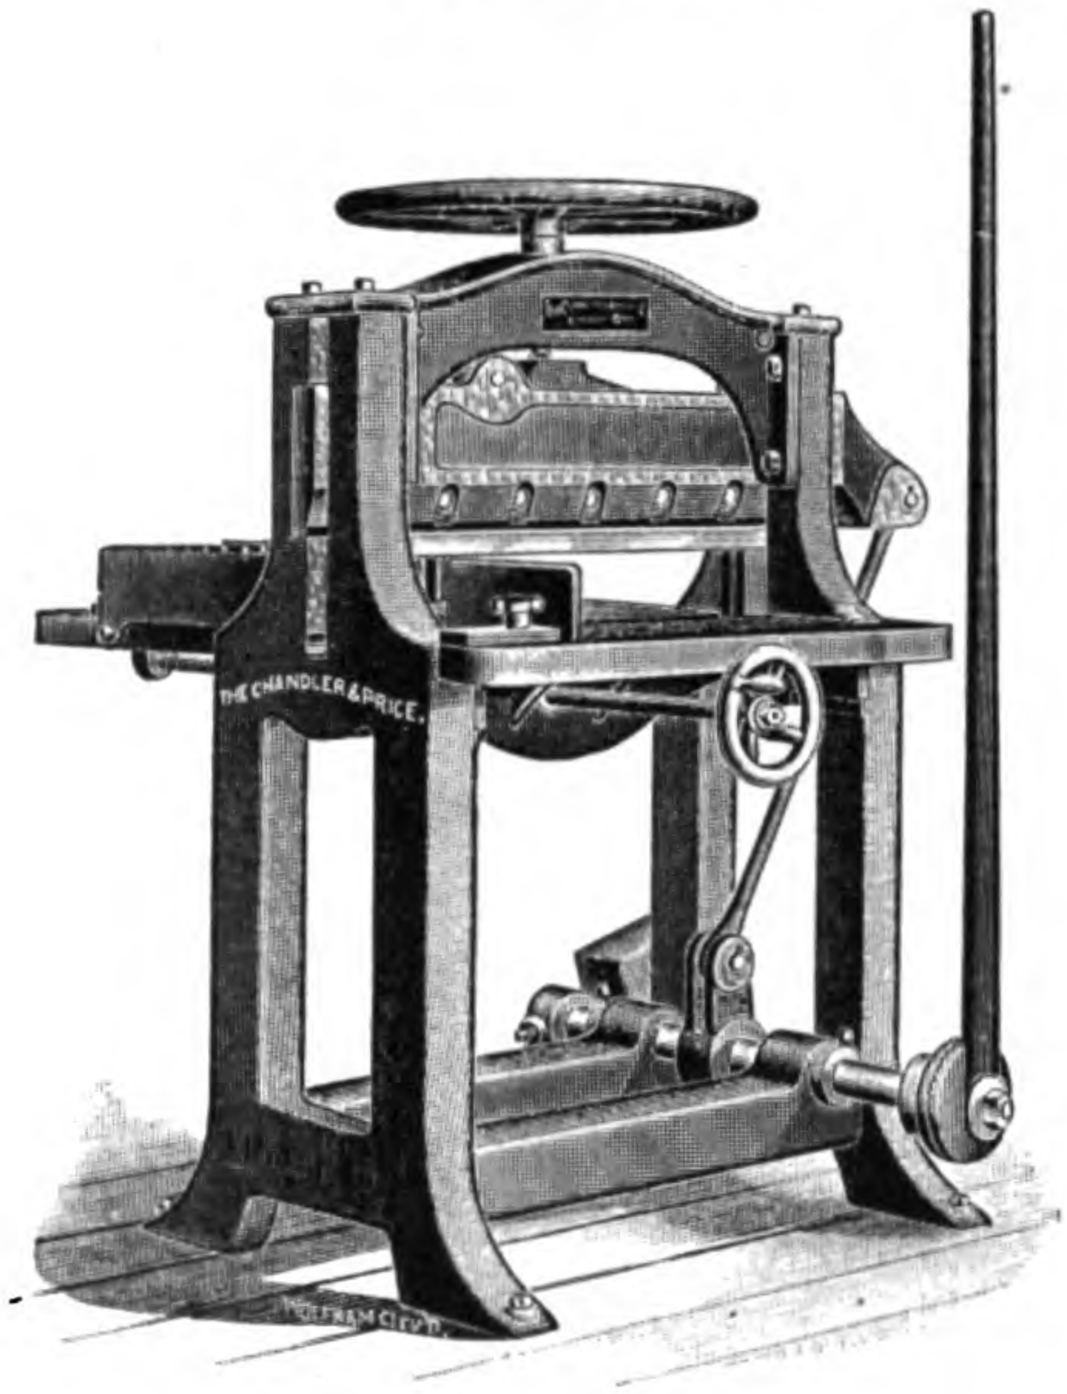
## CLIPPER PAPER CUTTER.

Designed for cutting small work, such as labels, circulars, etc. Has a patented reversible clamp, which cuts very narrow strips and leaves no marks on the paper. The lever is pulled forward to cut. Quality of construction is A1.

Cuts and squares 12 inches . . . $40 00



## CHANDLER & PRICE PAPER CUTTER.



It is built from new designs by scientific methods. It has ample metal, properly distributed to withstand strains. The back gauge and clamp interlock, clamping as narrow as one-half inch. The fingers of the clamp have a broad surface, to avoid creasing the stock. All gauges are accurately squared with the knife. The back gauge extends to within one inch of the side gauge, and is divided and adjustable for book trimming or squaring small work. All parts are strictly interchangeable, and accurately fitting replacements may be ordered by number.

Made by one of the most reliable builders of printing machinery in the world.

## CHALLENGE LEVER PAPER CUTTER.

Has set screws and gibs in the frames for taking up wear of knife-bar.

The 25-inch cutter is provided with both front and back stationary side gauges, which are cast on the side frame, and are accurately squared to knife and back gauge. The 30-inch and 32-inch cutters have, in addition to these, an extra side gauge in front, adjustable to either side; also a split back gauge, useful in trimming pamphlets. They are provided with the interlocking back gauge and clamp, for cutting narrow widths, without extra cost.

## CHALLENGE PONY LEVER PAPER CUTTER.

Used in conjunction with larger cutters, small cutters such as these and the cutters shown on page 930 often double the cutting capacity of an office at a small additional plant expense.

The especial advantage of the 19-inch cutter is that it cuts the usual sizes of flat papers—cap, demy, folio, double cap, medium, and royal.

Prices include interlocking back gauge and clamp, permitting stock to be gauged within one-half inch of knife.

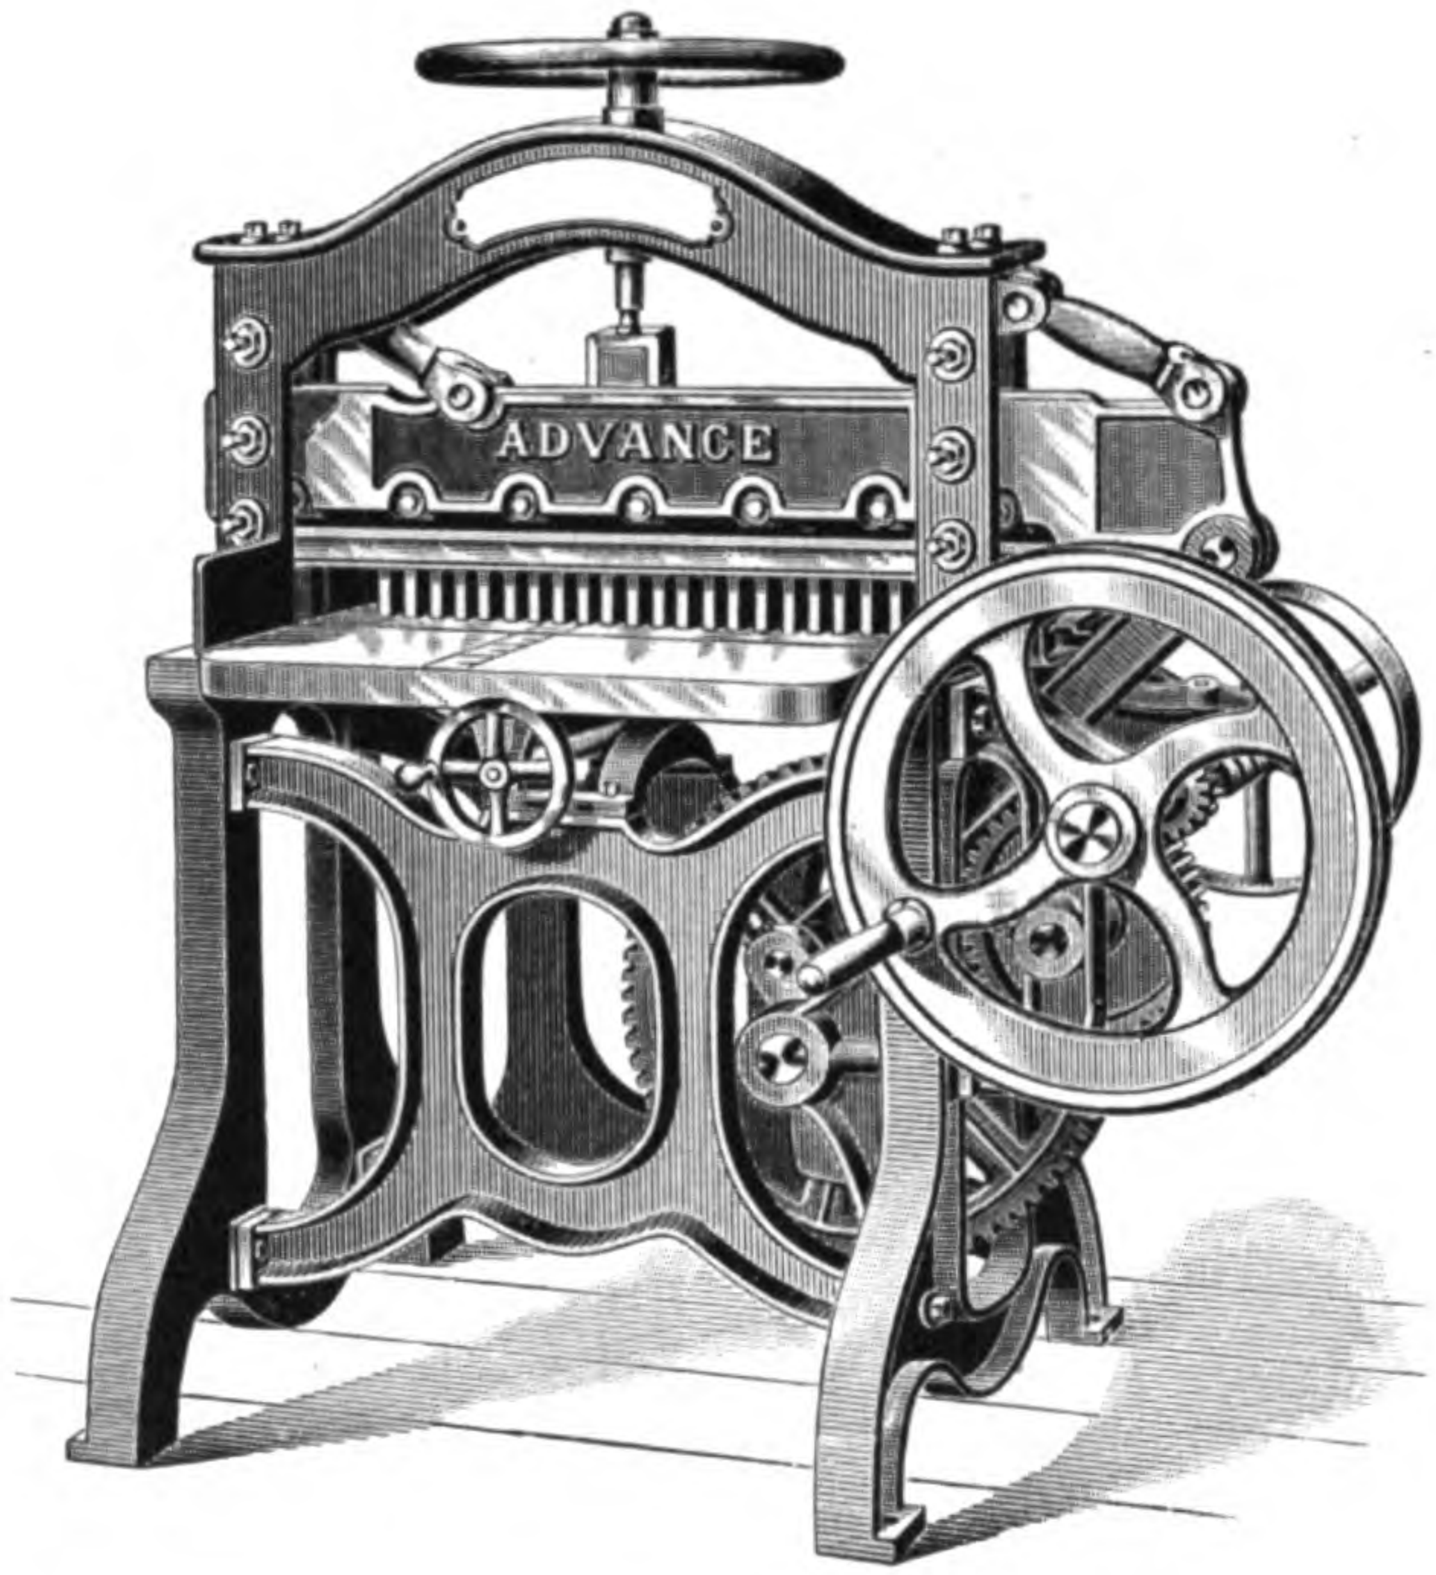
# ADVANCE POWER CUTTER.



**This is the lowest-priced Power Paper Cutter on the market, and can be recommended to buyers with whom low price is a prime consideration.**

The Advance Power Cutter is fitted for hand or steam, is solidly built, the frame is firmly stayed by two substantial cross-braces, upon which is bolted the arch that supports the center of the bed, making it perfectly rigid and firm under pressure of clamp or knife.

It is fitted with the interlocking back gauge and clamp, by which paper may be cut to within half an inch of the knife.

It has brass figured rules in bed, back and front.

The throw-off is automatic and stops the knife instantly; it may be thrown off at any point, thus obviating possible waste of paper through error.

The knife has a dip-cut, which will be duly appreciated by all requiring a power paper cutter.

The slideways in which the knife bar moves is faced with steel gibs secured and adjusted by means of three set-screws on each side, so that any wear in the slideways may be taken up quite easily.

This is a very convenient style of cutter, as it will be found to be an effective and easily operated hand-power cutter at times when other power is not available.

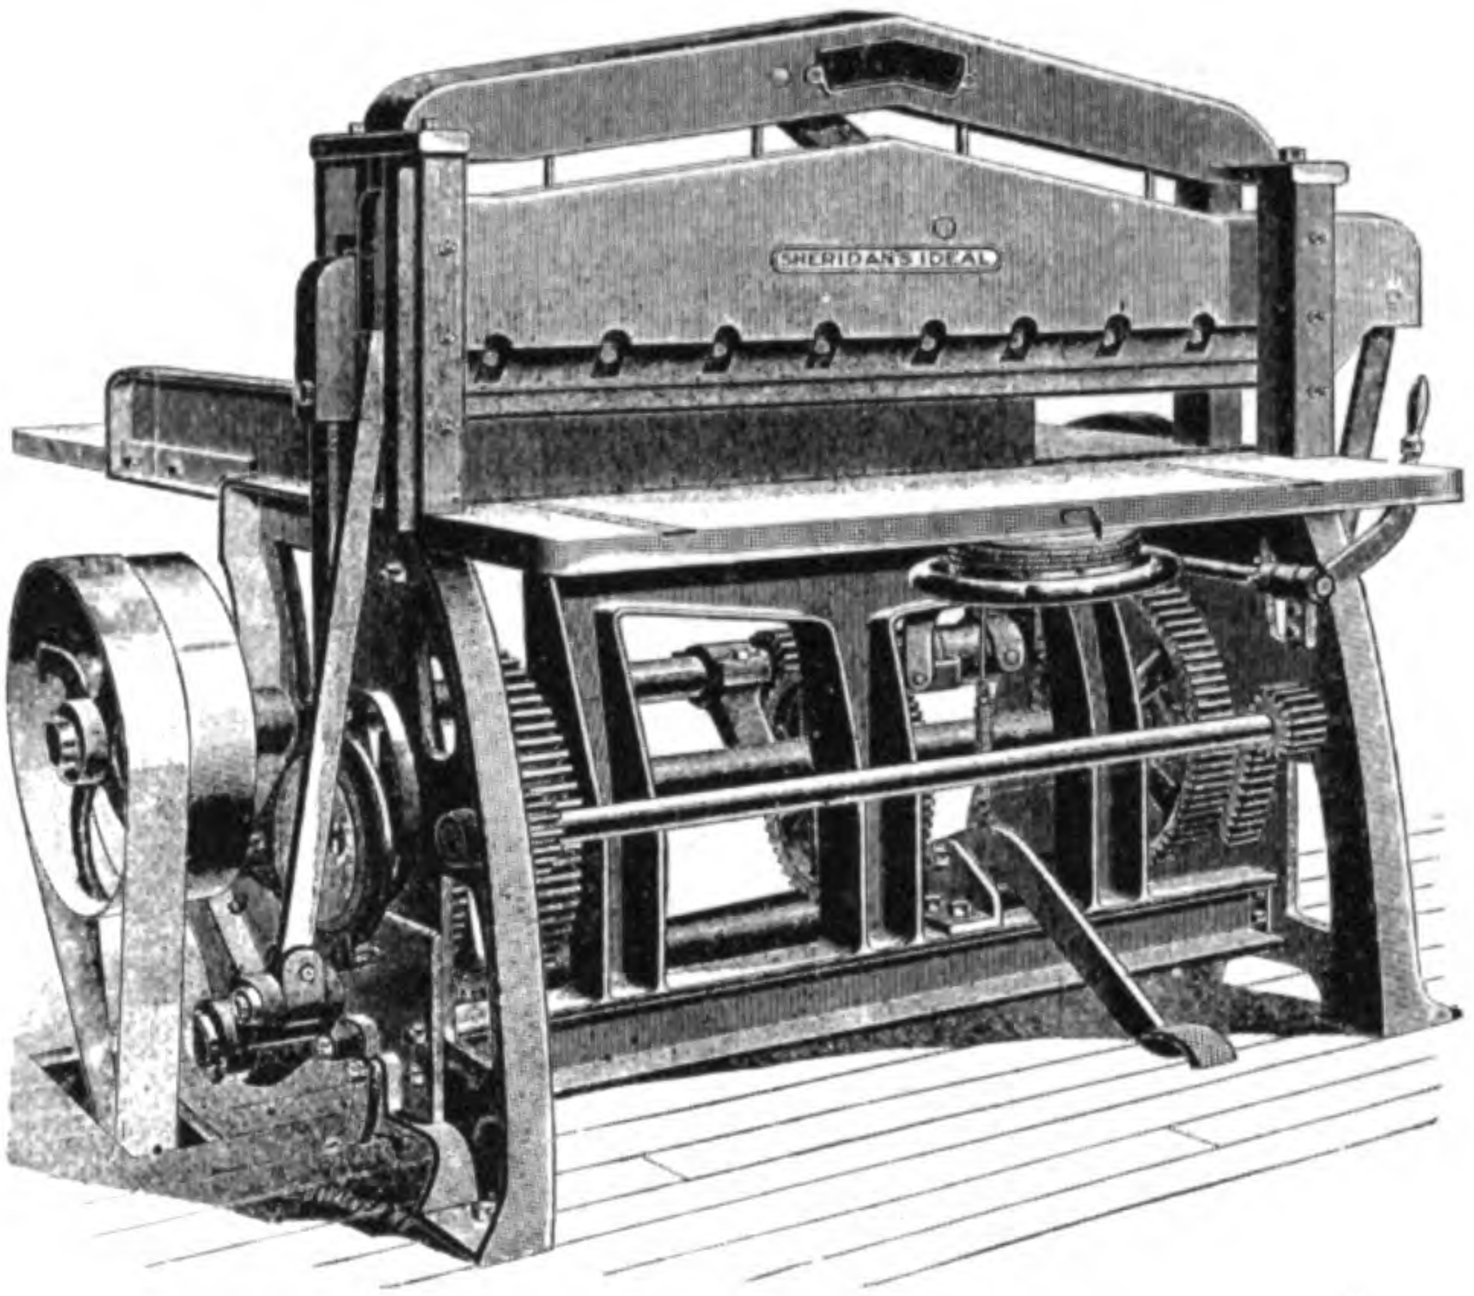
# SHERIDAN'S IDEAL CUTTER.



This cutter embodies the result of sixty years of labor and experience. Has all the desirable features of the well-known "Auto." Cutter, with the advantage that both clamp and knife are drawn down from both ends with no reverse motion of gear, thus securing an absolutely noiseless machine, with a positive and very powerful automatic clamp motion. All gears are cut and all shafts of steel.

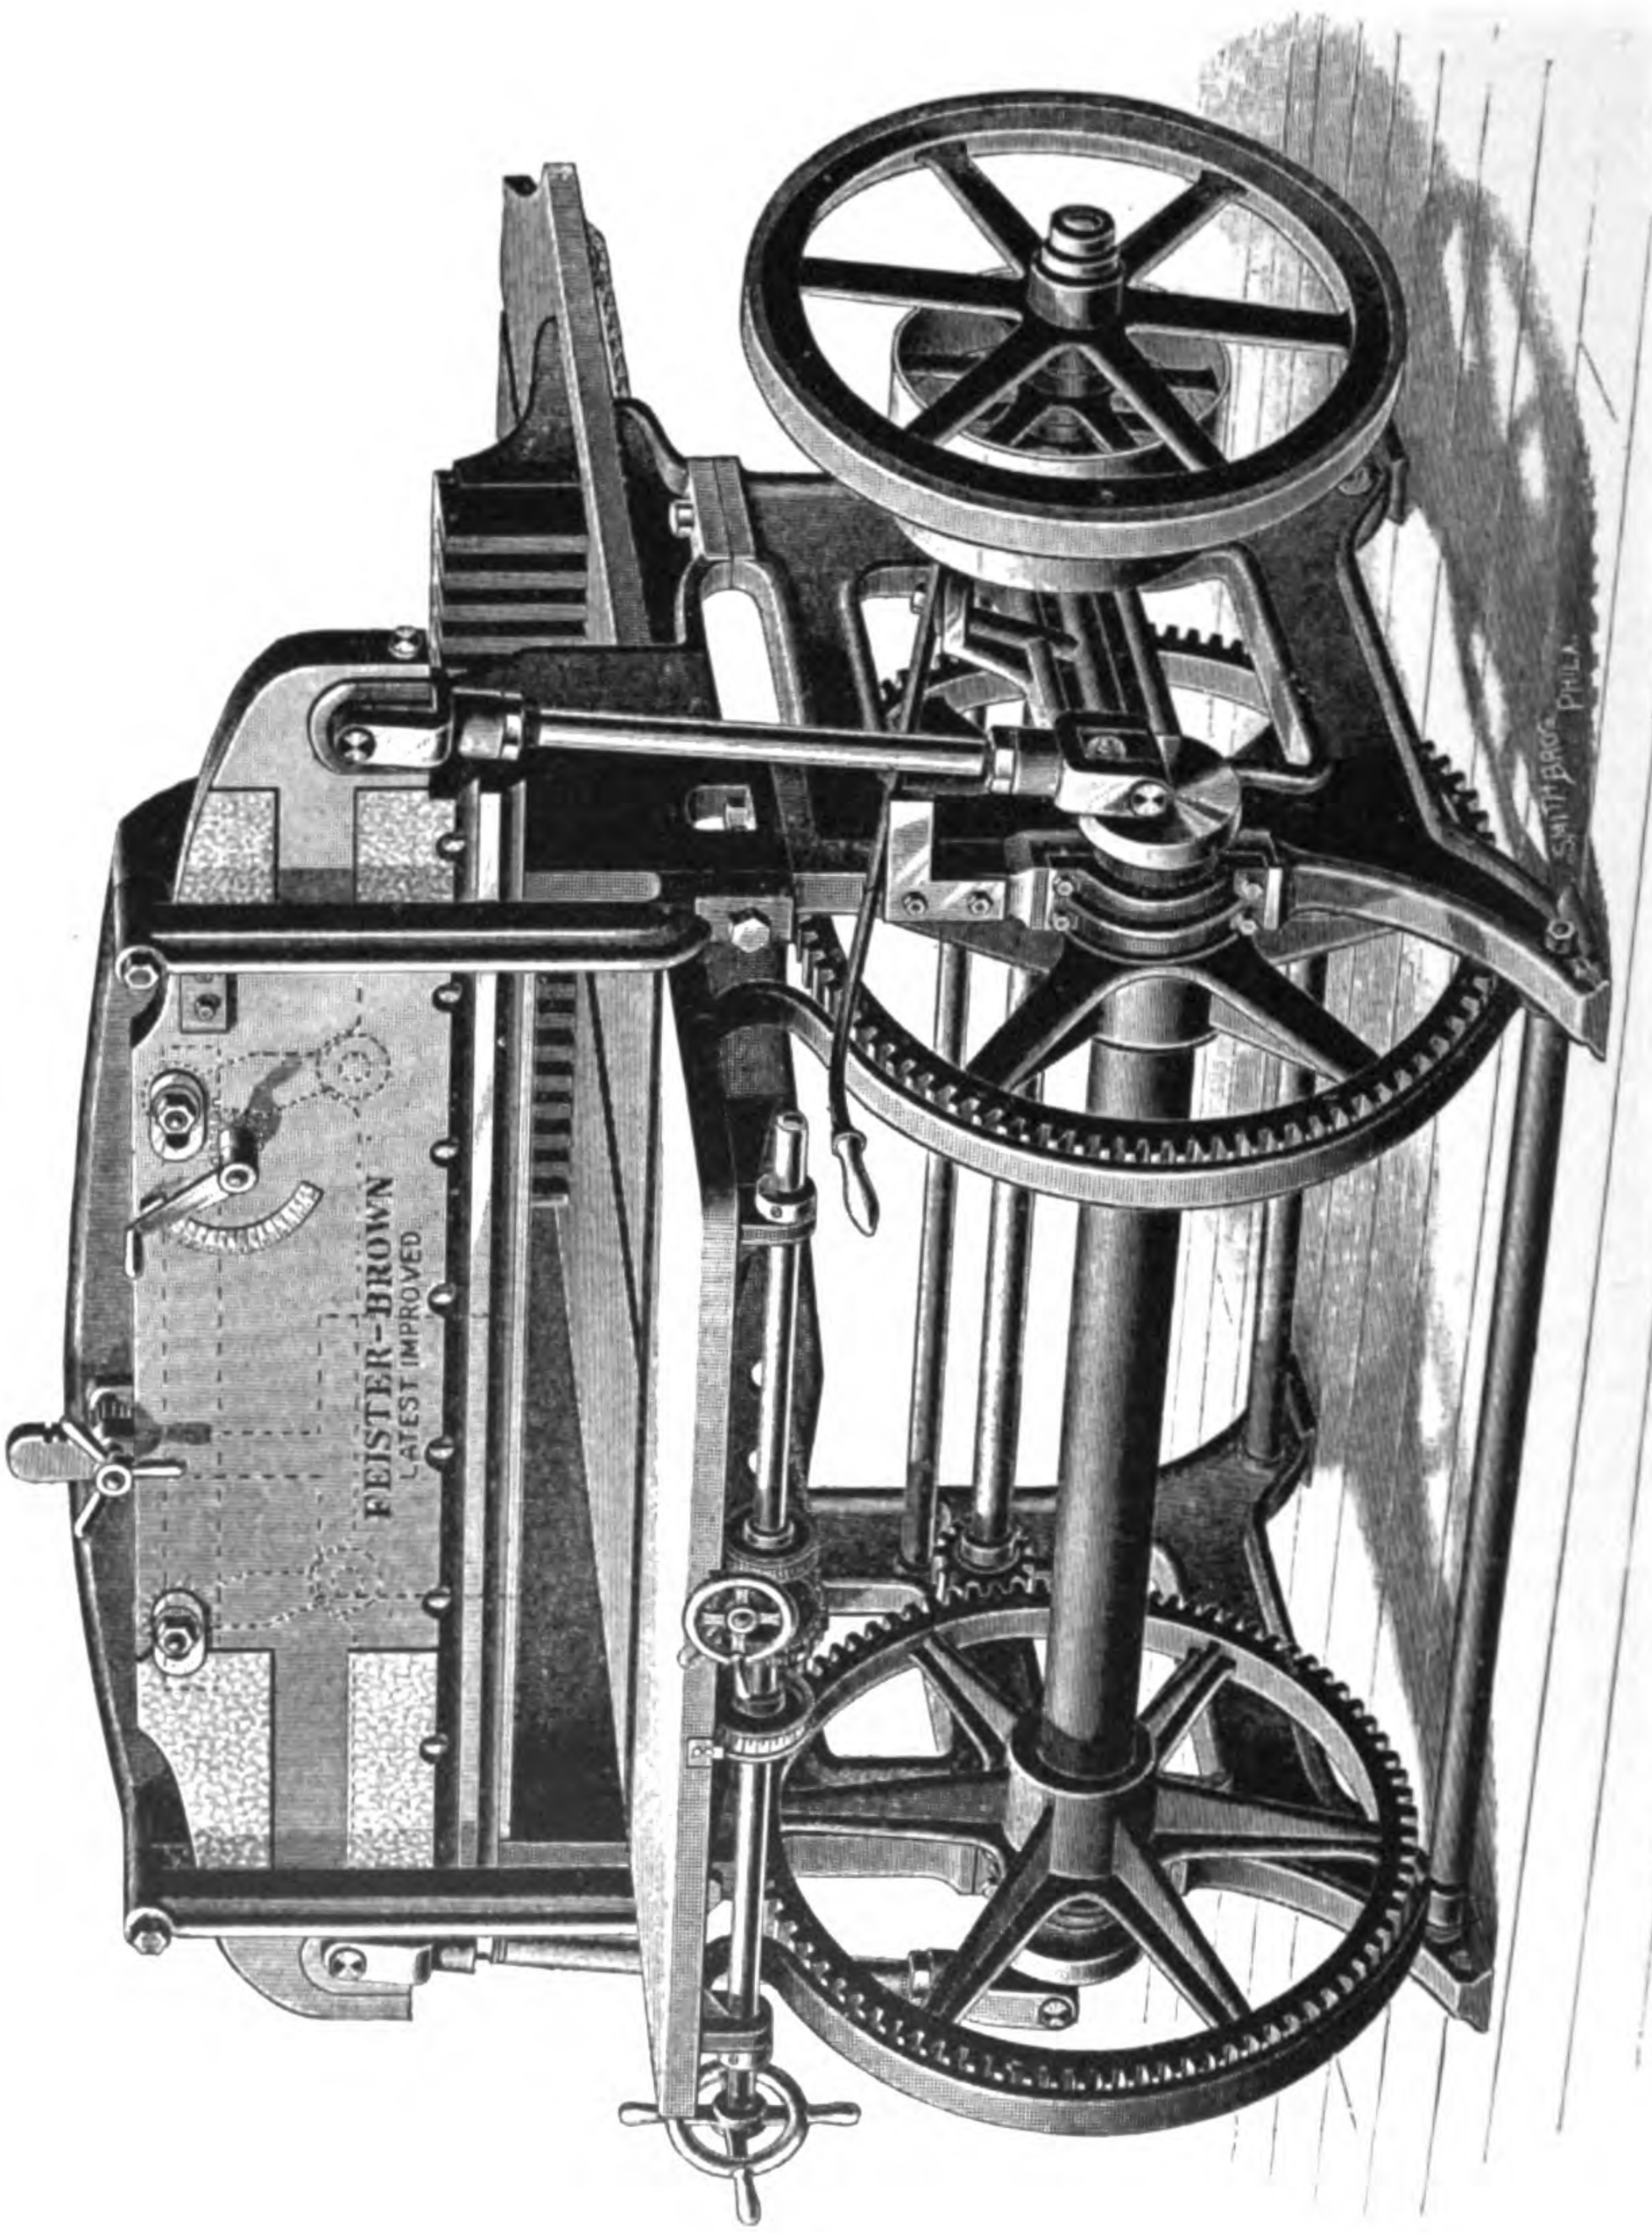
# FEISTER-BROWN SELF-CLAMPING PAPER CUTTER.



# FEISTER-BROWN SELF-CLAMPING PAPER CUTTER.

*See illustration on opposite page.*

The automatic clamp on this cutter is so constructed that it can be made, by the turn of a lever, to clamp hard or easy, as the nature of the work may require. This clamp is actuated by a patent automatic parallel link motion that has only three working parts, which cannot get out of order. It will hold one sheet or five inches of paper with equal security. It is provided with an advance gauge which can be brought down to the work at will, in advance of the knife, and returned to its highest position whether the knife is moved or not.

The knife bar is actuated by a very strong shaft, fitted with cranks at both ends. These cranks have adjustable connecting rods attached to universal bearings on both ends of the knife bar and on the cranks (no awkward ball joints).

Motion is imparted to the crank shaft by twin gears and forged steel pinions, all placed inside of the machine frame, with the result that all strain of clamping and cutting is equally distributed over the whole machine frame (no oblique or twisting strains on the machine).

The machine is driven by one of the most complete friction clutches ever applied to a machine, which contains the fewest possible parts to be used to obtain the most durable and best results, and the machine can be run from twenty-five to thirty cuts per minute with ease and safety.

The whole upper portion of the machine frame, including table, side gauge, girder and top cross stay or arch, are cast in one solid, massive, rigid piece of iron. Not a bolt is used, therefore none can work loose, besides the machine has the advantage of being much truer and stronger than when bolted together in the old way.

The back gauge is made in two parts for printers' use and in three parts for bookbinders' use, so that heads, tails and fronts of books can be trimmed without moving or changing it.

It is fitted with quick traverse movement, as well as hand-screw movement for "fine precision adjustment."

A measuring band, in convenient sight of the operator, indicates the sizes to be cut, both in front of the knife as well as between the back gauge and knife.

The back gauge is fitted with patent finger sections that slide so close on the table that the thinnest tissue cannot get under it. They also enter recesses in the clamp, so that the last of the stock can be cut up close to the knife. By this method there are no awkward grooves planed in the table to displace the under sheets, as used on some makes of machines.

This machine is a model of simplicity in construction. It contains but eight main moving parts. There is nothing about it to get out of order.

This cutter is the joint invention of Samuel Brown (inventor of the Brown & Carver Paper Cutter) and H. P. Feister (inventor of the Feister Perfecting Press and other well-known machines), and is the fruit of their very lengthy experience in constructing paper cutters.

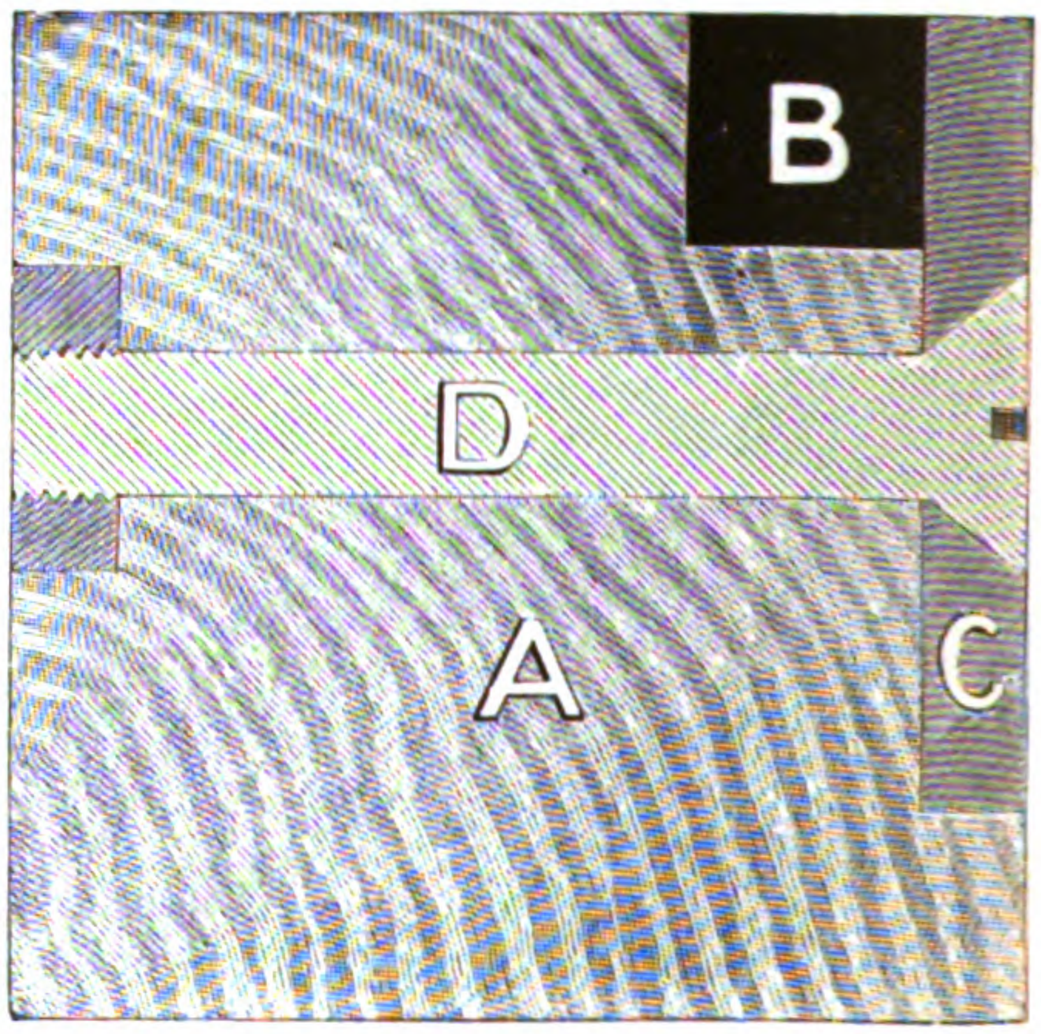
## HAMILTON PATENT CUTTING STICK

Consists of a main body piece (A), made to fit the groove of your paper cutter. The body piece has a groove or recess in it, which holds a small strip (B) one-quarter of an inch square. This removable strip is the cutting surface, and is held in place by a steel clamp (C), which is drawn up by the bolts (D). The cutting strips, being square, can be used on four sides, thus giving the same amount of service as the large-size sticks heretofore used.



### SEE THAT B?

**A** is the body piece made to fit groove in cutter.
**B** is the cutting strip on which knife strikes. It is one-fourth inch square, and is just as effective as if it was one and one-quarter inch square, also cheaper, and always fits.
**C** is the steel clamp which holds the cutting strip and prevents warping.
**D** is the screw which grips the clamp to the body piece.

## ADVANTAGES.

1. The steel strip or clamp (C), running the extreme length of the main body piece, and firmly screwed thereto, effectively prevents springing and warping, which cannot be prevented on ordinary cutting sticks.

2. There is no wear on the body piece, and as it is fitted exactly to the groove of your cutter your troubles from ill-fitting sticks (necessitating packing, etc.) cease.

3. The cutting strips are all made to a uniform standard and are interchangeable, and thus there is an absolute certainty of them fitting.

## HOW TO ORDER.

1. Give size square the main body piece is to be. Be particular on this point, and see that groove in cutter is accurately measured. 2. Give length of stick. 3. State how far from *front* edge of stick the knife strikes. 4. State whether knife cuts from right to left or left to right. In ordering cutting strips give the exact length required. All strips are cut to a standard uniform gauge, and are sure to fit.

# AUTOMATIC KNIFE GRINDERS.

Knife grinders have become a necessity in large printing offices, as well as in offices remote from grinding establishments, as in the latter the saving not alone of the cost of grinding, but of expressage, delays, and extra knives will very soon pay for the cost of a knife grinder.

Two styles are made. In the light pattern, as illustrated on this page, the slide or knife holder is moved by hand against the emery wheel, which is turned by power.

The weight of the 32-inch size is 550 pounds, boxed. The tight and loose pulleys are six inches in diameter, and should run at 1100 revolutions per minute.

The grinder is adjustable for flat or concave grinding. The emery wheels are eight inches in diameter, with three and one-half inch face, and can be used up almost entirely. Extra wheels cost **$4 00** each, net.

In ordering light or heavy pattern grinders it is necessary to send accurate description of knives to be ground. Knife holders are made to suit any knife without extra charge.

# HEAVY PATTERN AUTOMATIC KNIFE GRINDER.

In this style the knife holder is moved by power, and reverses automatically. The knife holder can be set at different angles from the emery wheel, which has a flat face with the corners rounded off. If the bed is set at a right angle to the emery-wheel spindle, the knife moves back and forth against the face and is ground a flat bevel; if it is set at any other angle the rounded corner will do the grinding and the bevel will be concave. This feature will be appreciated by those who prefer a flat, stout edge for rough work, and a thin, concave edge for fine work. The emery wheels are twelve inches in diameter with four-inch face, and can be used up almost entirely. Extra wheels cost **$7 00** each, net. The tight and loose pulleys are eight inches in diameter, and should run at 800 revolutions per minute. Weight of the 108-inch grinder is 1800 pounds. A perfect water attachment is supplied, the water being delivered in any desired quantity on the bevel of knife by means of a brass centrifugal pump.

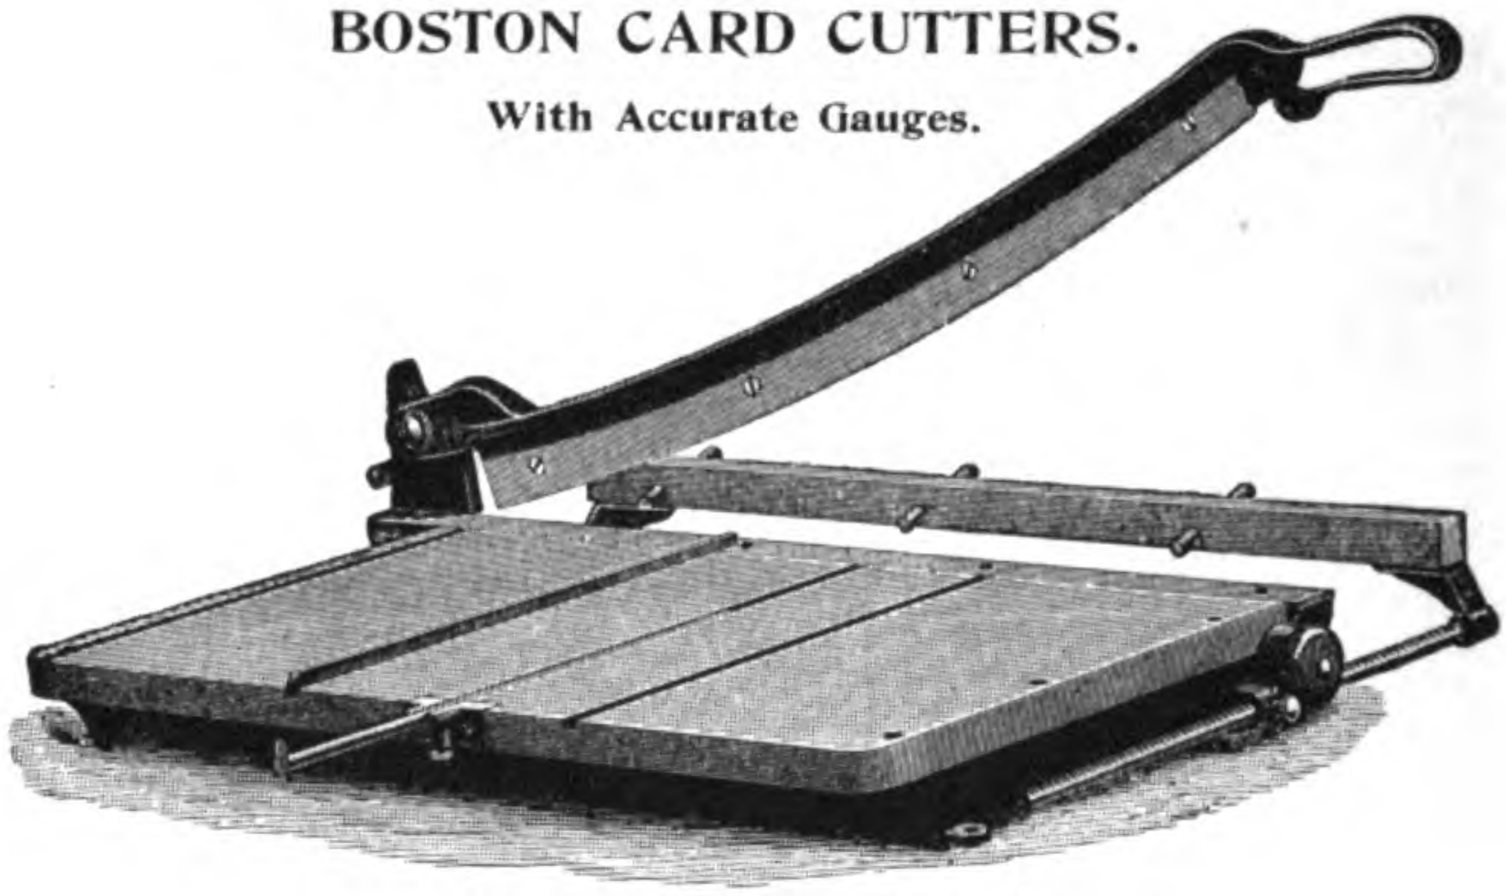
## BOSTON CARD CUTTERS.

**With Accurate Gauges.**



No. 24. With 24½-inch blade.

These cutters have iron frames and polished hard-wood tables. The Nos. 12 and 24 sizes have accurate front, side and back gauges. The front gauge is operated by racks and pinions which hold the gauge securely at each end, and move it exactly parallel with the knife. No clamp is required, as the knives have a drawing cut, which keeps the sheet straight.

The No. 12 size will cut any length of sheet in two or more cuts, as the standard that holds the knife bar is on its inner side in line with the cutting edge, as shown in the cut.

The No. 8 size has a reversible gauge, which may be used either at front or back.

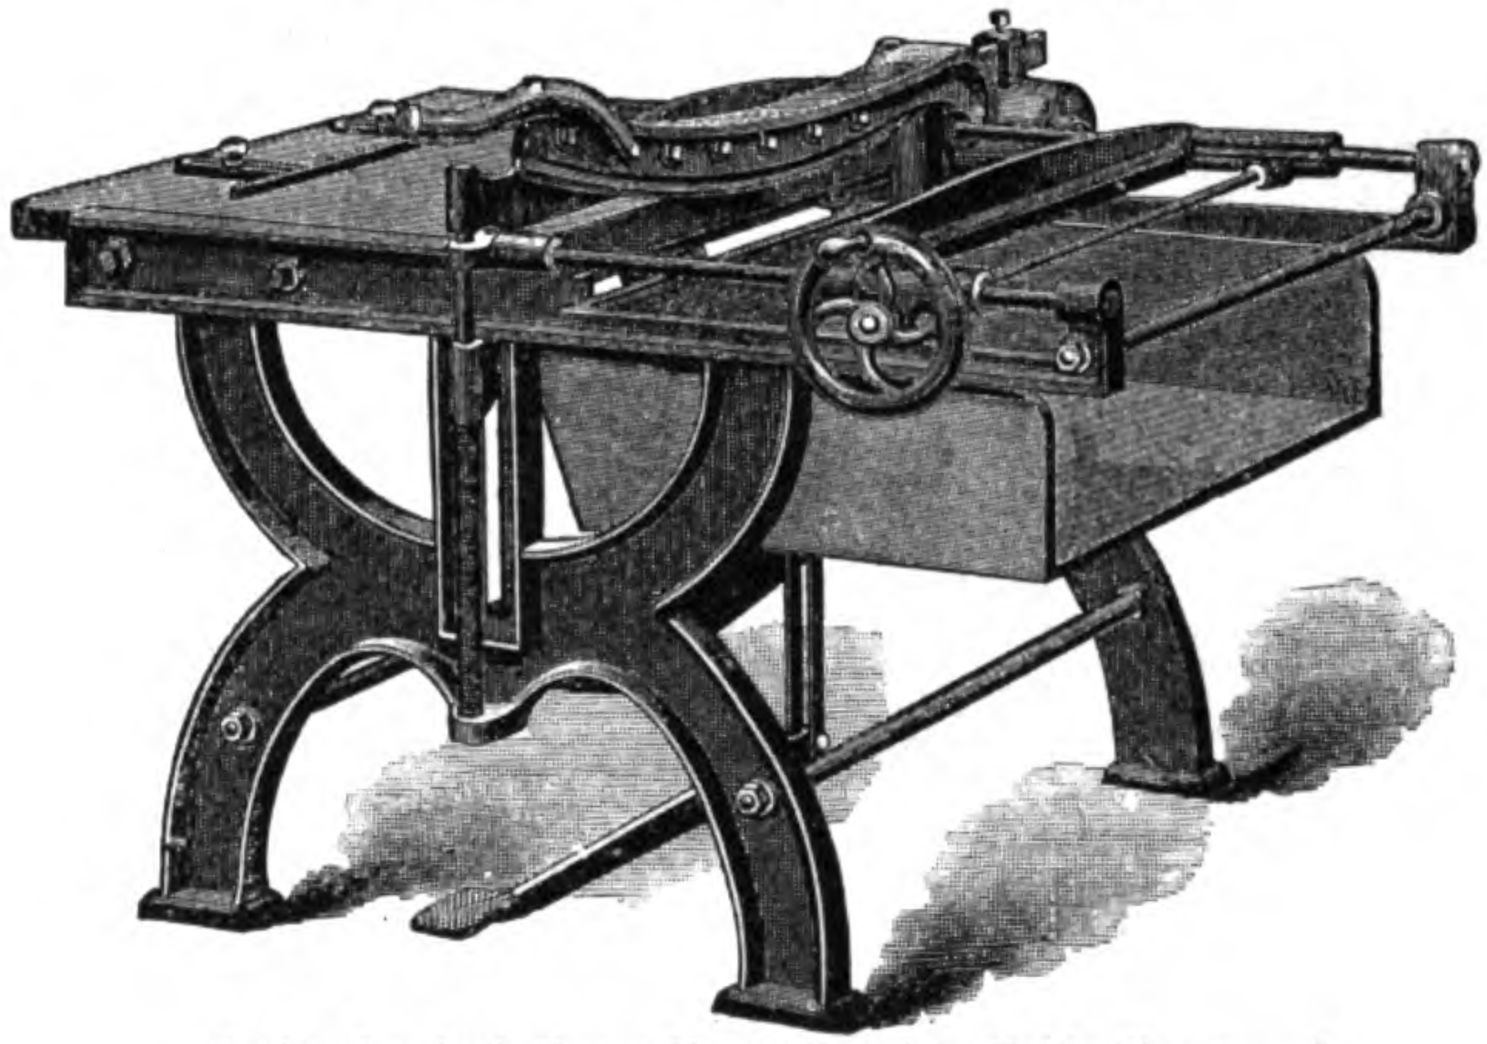
# MONITOR TABLE SHEARS.



Style of 34-inch Extra Heavy Monitor Table Shears.

Two styles are made: No. 1, 32-inch, for general use, and No. 2, 34-inch, extra heavy, for work that demands greater power. The knife, gauges and method of operation are the same on each style. The knife-bar head is adjustable laterally and vertically, and another adjustment at the head enables the knife bar to be swung either way, so as to secure its perfect alignment with the bed, and insure a perfect shear cut. The screws holding the knife-bar head are 1⅜ inches in diameter, and are turned at an angle of 55 degrees, which prevents the knife bar from springing. The clamp is parallel, and descends upon the whole length of sheet at once when the foot is placed on the clamping treadle. The gauge is operated by a hand wheel attached to a geared pinion and rack. The rack is of steel. One revolution of the hand wheel moves gauge four inches. The table is scored both ways, and is provided with side and end adjustable gauges.

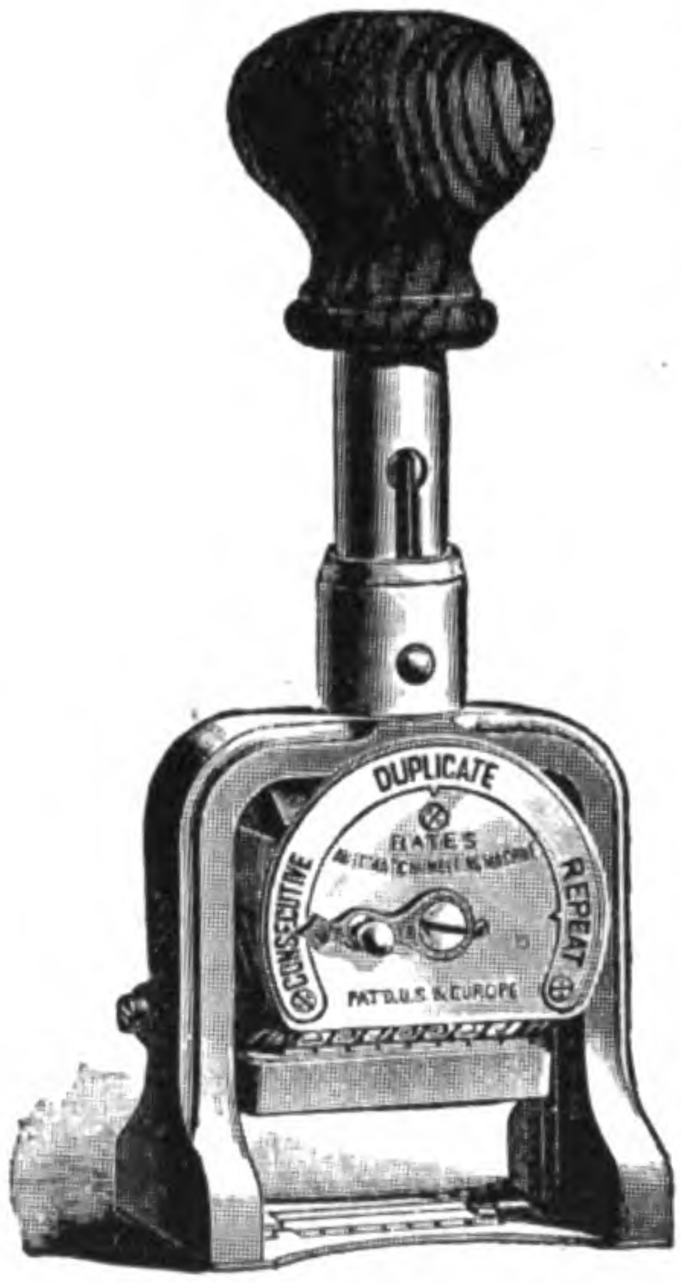
## BATES AUTOMATIC NUMBERING MACHINES.



Bates Machine, one-half actual size.

These very superior machines operate consecutively, duplicate and repeat, and the changes are made instantaneously by simply moving the pointer on the dial. The figures are cut in steel, and print perfectly. The movement of the figures is entirely automatic from 1 to the full numerical capacity of machine. The figures receive ink automatically from a thick felt pad. The mechanism, materials and finish are unsurpassed. All parts are interchangeable, and the operation is noiseless. Weighs about 16 ounces. Styles of figures follow:

Acme Staple Binder No. 6. For treadle, with flat and saddle tables.

**Price, $40.00**

# No. 6 ACME TREADLE STAPLE BINDER.

**The Only Staple Binders Which Will Not Clog.**

The No. 6 Acme Wire Staple Binder does a greater range of work, and does better work, than any other staple binder. At one stroke of the treadle it drives, clinches and releases the staple, each operation being independent, though continuous. It holds two hundred and fifty staples at a charge, and round or flat and fine or coarse staples may be used. Staples are fed automatically to driver by positive pressure on both legs, and clogging is prevented by a device which effectually prevents more than one staple getting under the driver at a time. The clinch is perfect on any thickness. There is ample room for putting in and taking out work, as the driver arm lifts more than an inch above the table after each clinch. There is a long space under the arm for calendar work. The treadle has a positive movement. Every machine is furnished with a strong iron stand. Will bind to a thickness of ¼ inch through any kind of paper, and is furnished with both flat and saddle-back tables, with gauges on the flat bed. For hard or coated papers, when the work is heavy, flat wire staples are used.

# No. 4 ACME TREADLE STAPLE BINDER.

**The Only Staple Binders Which Will Not Clog.**

The No. 4 Acme is very similar in appearance to the No. 6, and will stitch the same thickness on ordinary paper, but it uses only round fine staples, which cannot be used successfully on coated or filled paper unless such work is light. This machine is specially adapted for stapling the average run of pamphlets, calendars, sample work, etc. It does both flat and saddle-back work. It has the device for prevention of clogging, and the clinching is done by the pressure of the blade while driving the staple. Holds two hundred and fifty staples at a charge.

## UTILITY OF THESE MACHINES.

The addition of one of the Acme Treadle Staple Binders to the plant of small or moderate-sized printing offices, in towns in which there are no binderies, will make it easy and profitable to bind pamphlets, receipt books and other work. In towns where there are binderies they enable printers to save time, save handling of stock, and to avoid losses and damage in transit. All the staple binding machines in use were invented by one man, and the Acmes are the latest and most efficient. Like all such machines there is a certain knack to be acquired in order to handle them to the best advantage. Operators should read directions (which accompany the machines) very carefully.

## ACME STAPLE BINDER No. 1.

The most satisfactory low-priced staple binder made. *It will not clog*, as only one staple can get under the driver at one time. The frame swings on a pivot, and lifts high enough to give ample room for putting in and taking out the work—an advantage not obtainable on other low-priced staple binders. It holds one hundred staples at a charge. Binds ¼-inch and under. The staple is fed automatically under the driver, which descends and drives it through the paper, the pressure clinching the staple tight on the under side. Uses flat staples only.

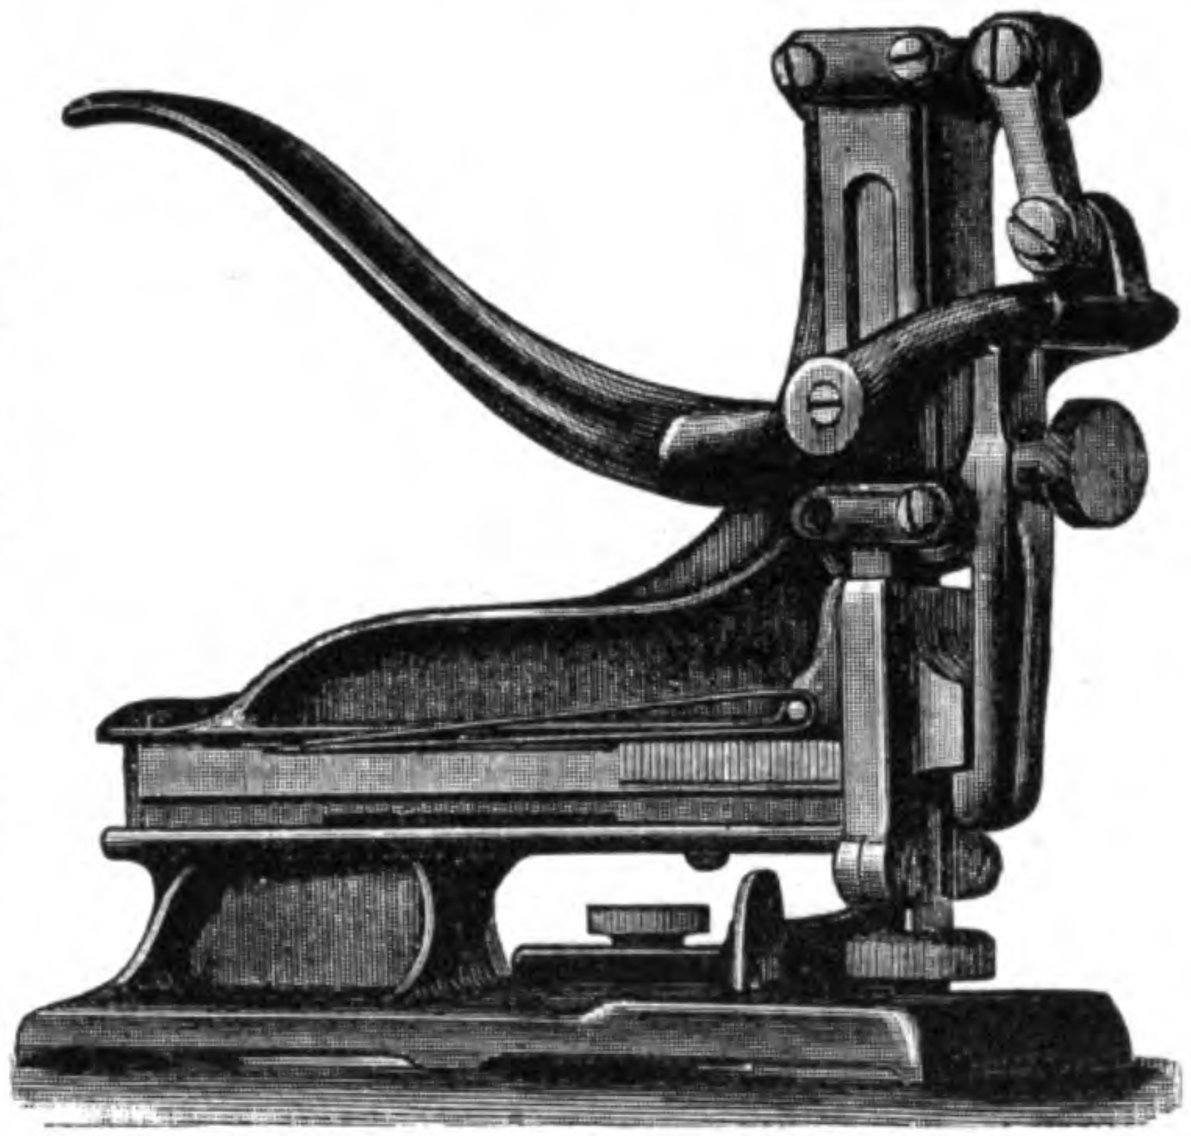
Price . . . . . $6 00
Staples: No. 23A, ¼-inch, flat; No. 24A, 5/16-inch, flat—per box of 5000 of one size . . 1 25

## SURE SHOT STAPLE BINDER No. 1.

The most reliable binder for office use. Holds one hundred staples at a charge. Works on the same principle as the Acme No. 1, described above, but has no lever. Binds from two to fifty sheets.

Price . . . . . $3 00
Staples: No. 23A, ¼-inch; No. 24A, 5/16-inch—per box of 5000 of one size . . . . . 1 25

## BREECH LOADER STAPLE BINDER.



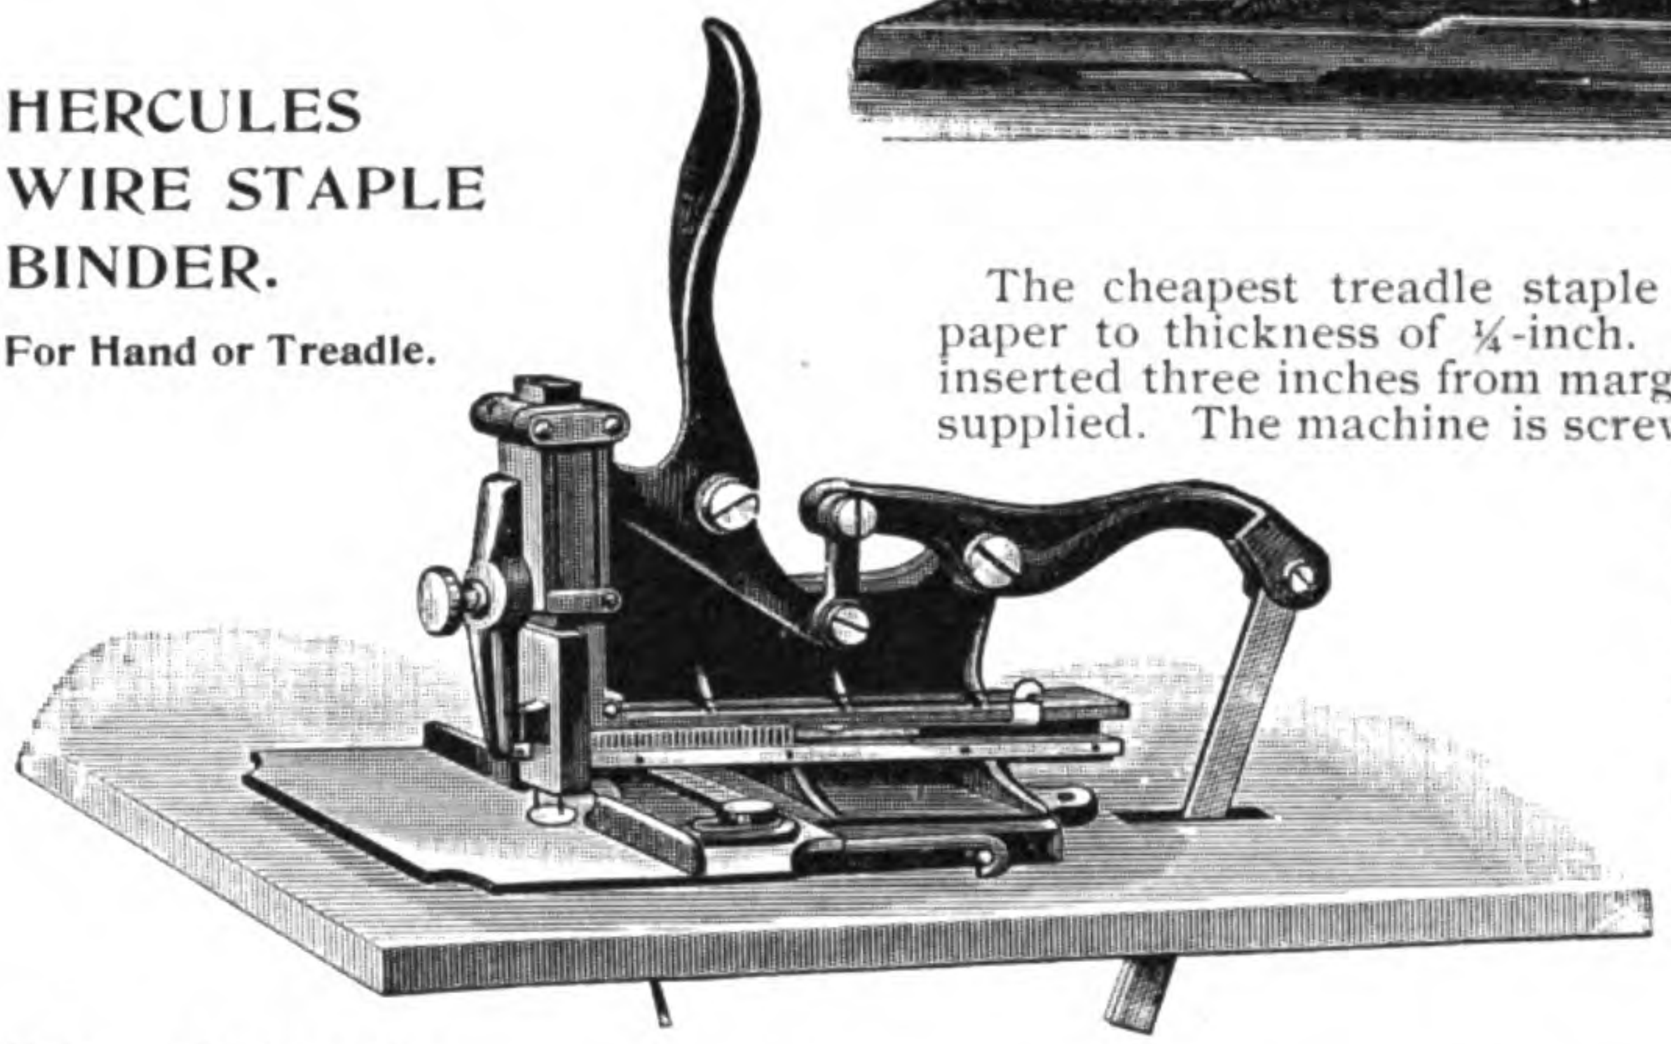
This is a handy machine for office use. Can be put to a great variety of uses. Binds paper or pamphlets from two to fifty sheets with wire staples; holds one hundred staples at a charge; feeds them out automatically; inserts them into the work, and clinches them on the under side.

Price . . . . . $3 00
Staples: C, 3/16-inch; D, 1/4-inch; E, 5/16-inch—per box of 1000 . . . . . 0 50

*Only one size of staples in a box.*

## HERCULES WIRE STAPLE BINDER.

**For Hand or Treadle.**



The cheapest treadle staple binder. Binds paper to thickness of 1/4-inch. Staples can be inserted three inches from margin. No table is supplied. The machine is screwed on a bench, and the treadle is screwed to the floor, connecting by means of a rod and spring.

Sold also for hand power only. Only one size of staples in a box.

Price, with treadle . . . . . $10 00
Staples: F, 3/16-in.; G, 1/4-in.; H, 5/16-in.; K, 3/8-in.—per box of 5000 of one size . . 1 25

## OTHER STAPLE BINDERS.

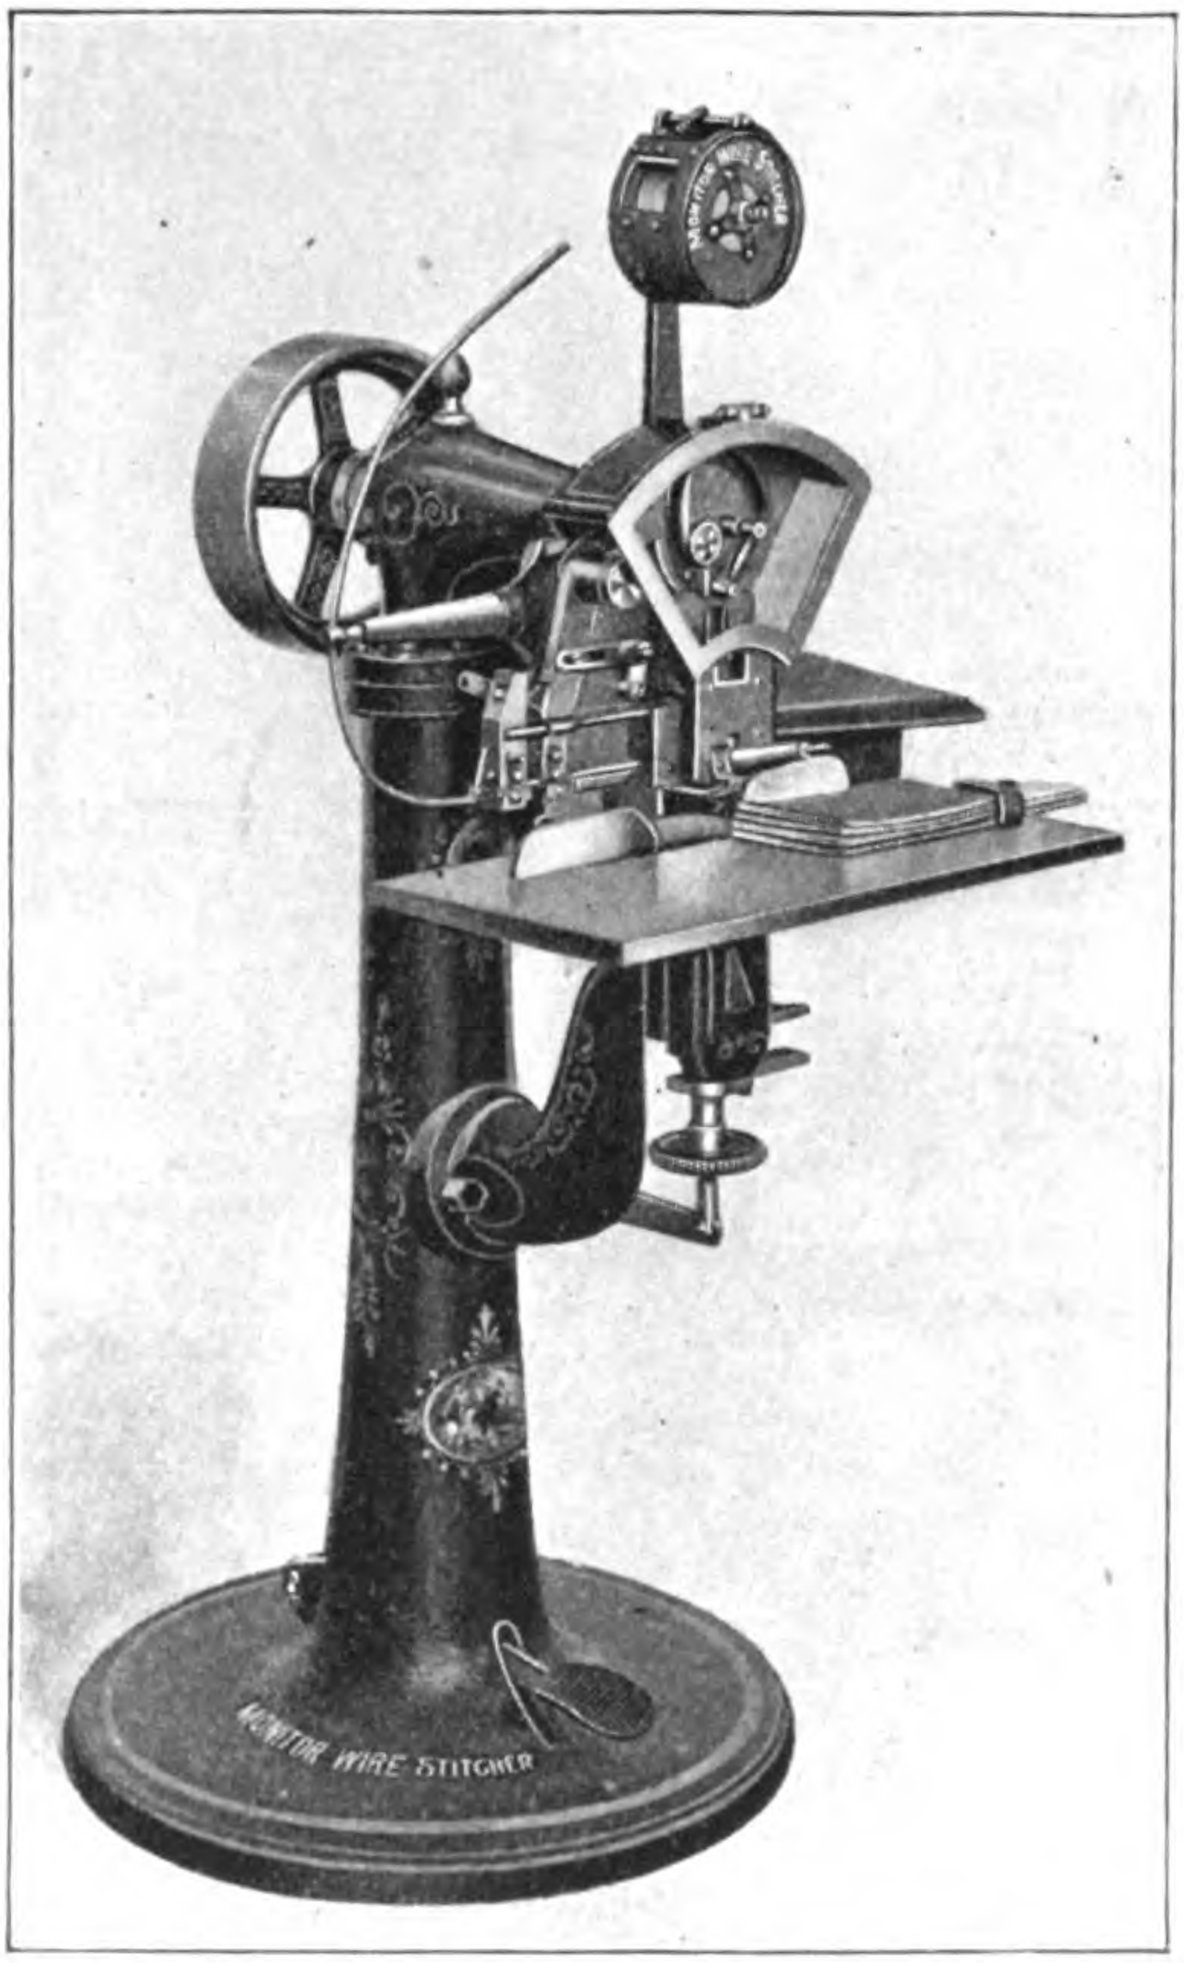
No. 9 Staple Binder binds paper 1/4-inch thick, complete with table and treadle . $36 00
No. 8 Saddle Back Staple Binder takes 3/16-inch staples only; designed for saddle-back work, but will take flat work by adding flat table; with saddle back only, $30 00; with flat and saddle-back tables . . . . . 31 50
Lightning Staple Binder No. 1 staples through 1/4-inch paper; No. 2 staples through 7/16-inch paper; each complete with treadle . . . . . 24 00

## WIRE STAPLES.

The prices for staples for the wire staple binders illustrated on this and preceding pages are given under the description of each binder. The following are the prices of staples for the binders not illustrated:

For No. 9 Staple Binder: Staples No. 1 1/2, 3/16-inch long; No. 2, 1/4-inch long; No. 3, 5/16-inch long—per box of 5000 of one size . . . . . $1 25
For No. 8 Saddle Back Staple Binder: Staples No. 1, 3/16-inch long—per box of 5000 1 25
For Lightning Staple Binder No. 1: Staples No. 7, 3/16-inch long; No. 8, 1/4-inch long; No. 9, 5/16-inch long—per box of 5000 of one size . . . . . 1 25
For Lightning Staple Binder No. 2: Staples No. 10, 3/8-inch long; No. 11, 7/16-inch long; No. 12, 1/2-inch long—per box of 5000 of one size . . . . . 1 25

# MONITOR AUTOMATIC WIRE STITCHERS.



Style of No. 0, 1, 1½ and 2½ Monitor Wire Stitchers.

These very efficient stitchers do a range of work from two sheets to work 1⅜-inch thick.

## ADJUSTMENTS.

There are only two adjustments: 1. The quantity of paper to be stitched is put in the thickness gauge, and the hand wheel at left of gauge is turned until the jaws clamp the paper tight. 2. Turn the hand wheel at right of machine to obtain proper length of staple, then turn the thumb-screw on the feed lever at the left to the same point on the scale.

## TWO STYLES MADE.

These stitchers are made with both roll-feed and straight-feed. The straight-feed machines have the advantage of lower price, but the roll-feed give the use of a greater range of thicknesses of wire, as explained below. On the roll-feed machines the wire passes through metal rollers which hold it firmly and smooth out all twists and bends in the wire. The roll-feed apparatus is automatic, and the lengths of staples can be changed without taking off any parts of the machine. We recommend the roll-feed machines, except on the No. 0 size.

## SPECIAL MACHINES.

The No. 2½ is made specially for stitching calendars, and has a long reach back and a long drop, so that the stitch can be made 10 inches from edge of the work. The drop is 16 inches. The No. 0, if specially ordered, can be supplied with an Automatic Clamp, which compresses the paper about to be stitched before the wire touches it. This is a valuable attachment where the paper is soft and spongy. It saves the operator the trouble of pressing the paper down with his hands, and very greatly increases the output of the machines.

## THICKNESS OF WIRE USED AND LENGTH OF STAPLES.

**Straight-feed Machines.**—No. 0 makes a staple 11/16-inch wide and uses No. 19 × 21½ flat wire only. No. 3 makes a staple ½-inch wide and uses Nos. 25 and 27 round wire, unless specially ordered for flat wire, when it uses No. 20 × 25 flat wire and No. 25 round wire only. Nos. 1, 1½ and 2 machines make staples ½-inch wide, and use No. 20 × 25 flat and No. 25 round wire.

# MONITOR AUTOMATIC WIRE STITCHERS.

*(Continued.)*

**Roll-feed Machines.**—Nos. 1, 1½ and 2 make staples ½-inch wide and use round wire from Nos. 25 to 30 inclusive, and No. 20×25 flat wire. Nos. 2½, 3 and 4 make staples ½-inch wide and use round wire only, Nos. 25 to 30 inclusive.

*See Price List of Wire on page 951.*

# PERFECTION WIRE STITCHERS.

Perfection Stitchers, as shown on this and following page, have for a number of years given invariable satisfaction with a minimum of trouble. They are exceedingly well made and strong. The adjustment from one length of staple to another is accomplished by changing a pin from one hole on dial plate to another.

These stitchers take wire from spools, and make staples from round or flat wire of any desired length within the capacity of each machine.

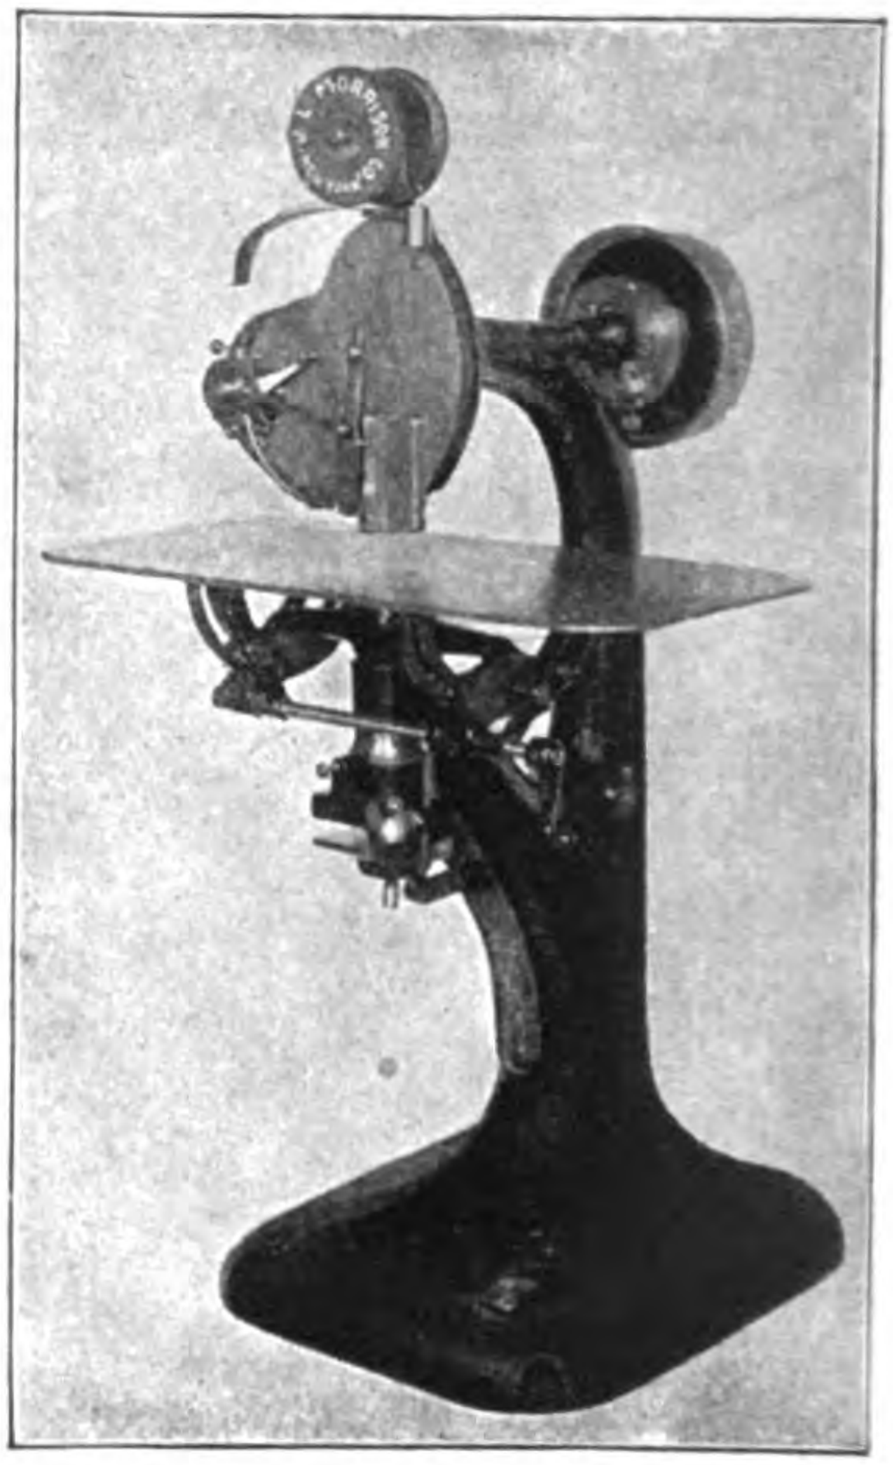
## No. 7 NEW PERFECTION WIRE STITCHER.



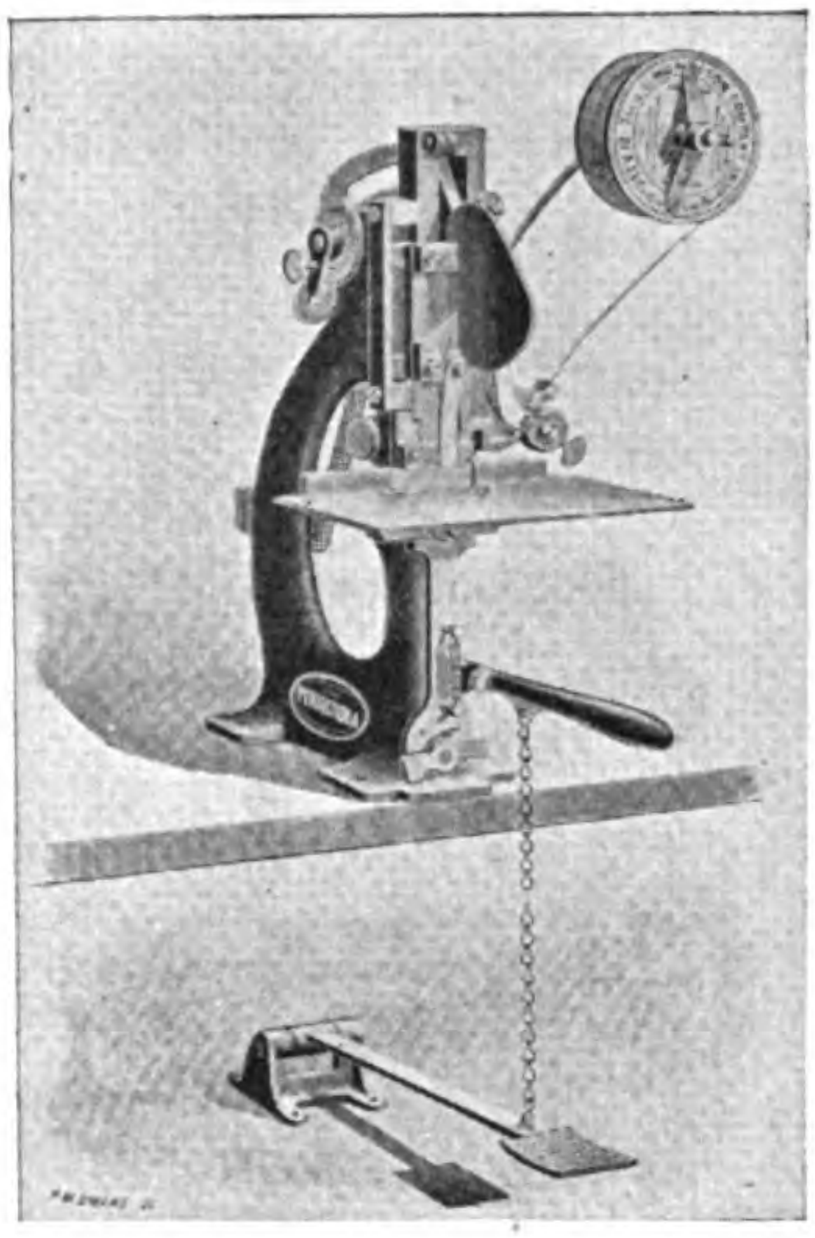
This machine has all modern improvements. It sets automatically for all thicknesses of work. The patent table is changeable from flat to saddle, or *vice versa*, without removal. There is an extra length of space between clinchers and frame to accommodate large calendars and extra large publications. Constructed expressly to stitch heavy work with light wire, without change of parts, although heavy wire can be used if desired. Has the roller-feed device in its latest improved form, and patent supporting and clinching devices which are unexcelled.

Will stitch from one sheet to ¾-inch, and will run wire as fine as No. 25, and also flat wire, 21 × 25, without changing any parts.

Price, complete . . . . . **$300 00**

*For Prices of Wire, see page 951.*

## PERFECTION "A" WIRE STITCHER.

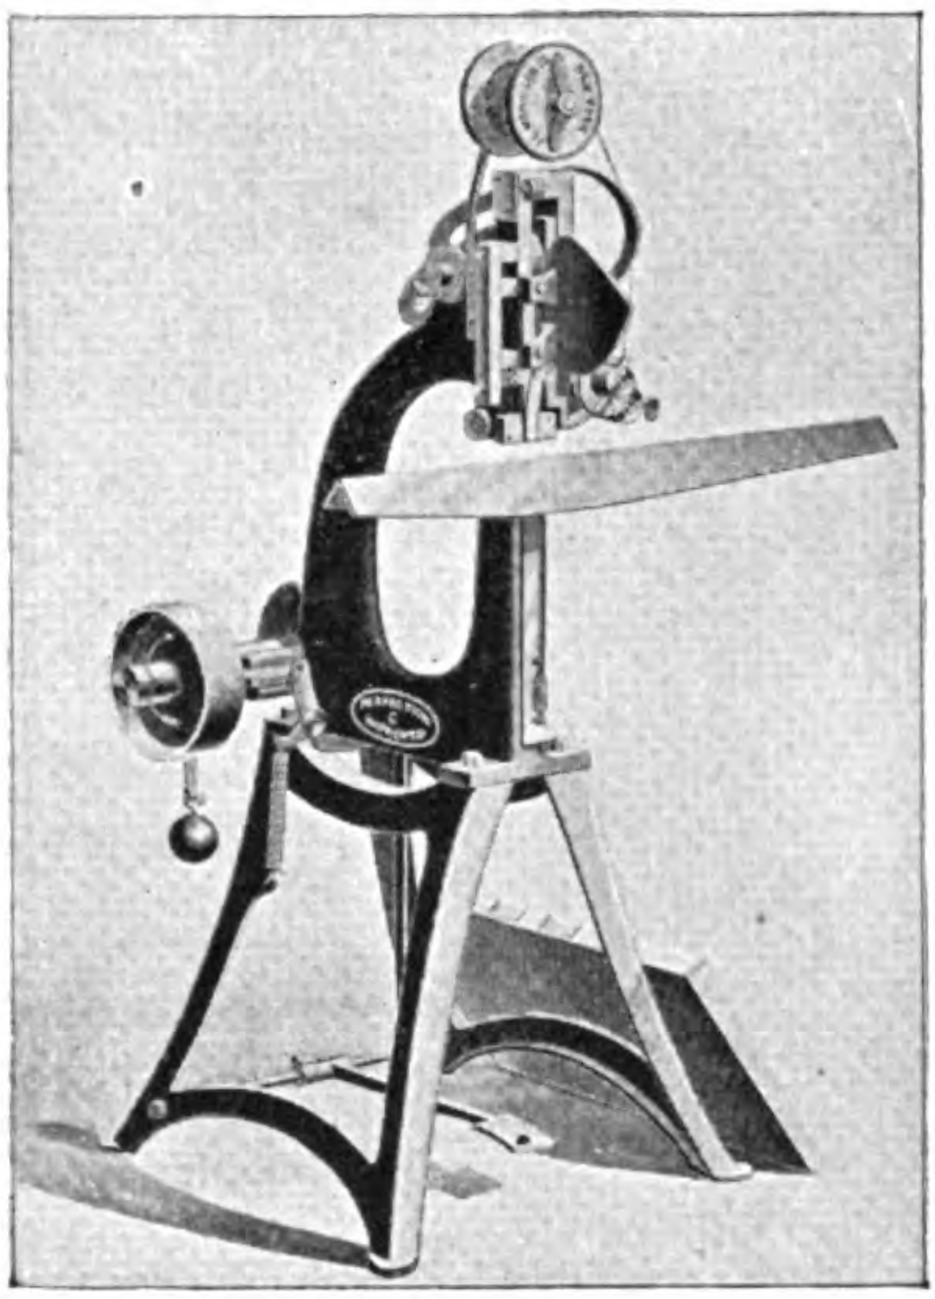


**Hand or Foot Power.**

It is adapted for work varying from two sheets to one-fifth inch in thickness. May be used with flat table or saddle, with wire of from 23 to 30 gauge. The saddle is extra long.

Perfection "A" Wire Stitcher, for hand or foot power . . . . . **$90 00**

## PERFECTION "C" WIRE STITCHER.



**For Steam Power Only.**

Specially adapted for pamphlet binding, stitching calendars, and all work up to one-fifth inch. Extra long saddle and flat table. Takes 23 to 30 gauge wire.

Perfection "C" Wire Stitcher, for steam power only . . . . . **$150 00**

## PRICE LIST OF BOOKBINDERS' WIRE ON SPOOLS.

*Discount on Quantities. Prices Subject to Change Without Notice.*

The success of every wire stitching machine depends largely upon the quality of the wire used. This wire is the best made.

A spool holds five pounds of wire. A case contains 20 spools (100 lbs.). Spools are 10 cents extra each, and are returnable less transportation charges. Do not return spools without previously sending us notice, as such notice may enable us to save you some expense.

# BOOKBINDERS' WIRE ON SPOOLS.

The wire we carry in stock is the very best procurable, and it will be sold at prices as favorable as any prices obtainable elsewhere for the same grade of quality.

There is no economy in poor wire, as the trouble it occasions much more than offsets any saving in the first cost.

The standard list prices are printed on page 951. These are by no means as low as the net prices we quote to regular users. The prices of wire are subject to frequent changes on account of the fluctuations in the cost of metals.

The table below will save users of wire a great deal of time, and enable them to estimate accurately the cost of wire in each job and the amount necessary to order.

## WIRE STAPLE TABLE: SHOWING NUMBER OF STAPLES TO ONE POUND OF WIRE.

To ascertain the number of staples to one pound of wire, measure *full length* of wire in staple, go to first column on left of table and pass down same until you reach the size that corresponds with staple measured; pass along to right until you reach size of wire used, shown by top row of figures. Example: If your staple measures 1½ inches, and the size of wire is No. 28, there are 11,940 staples to one pound, as shown in table.

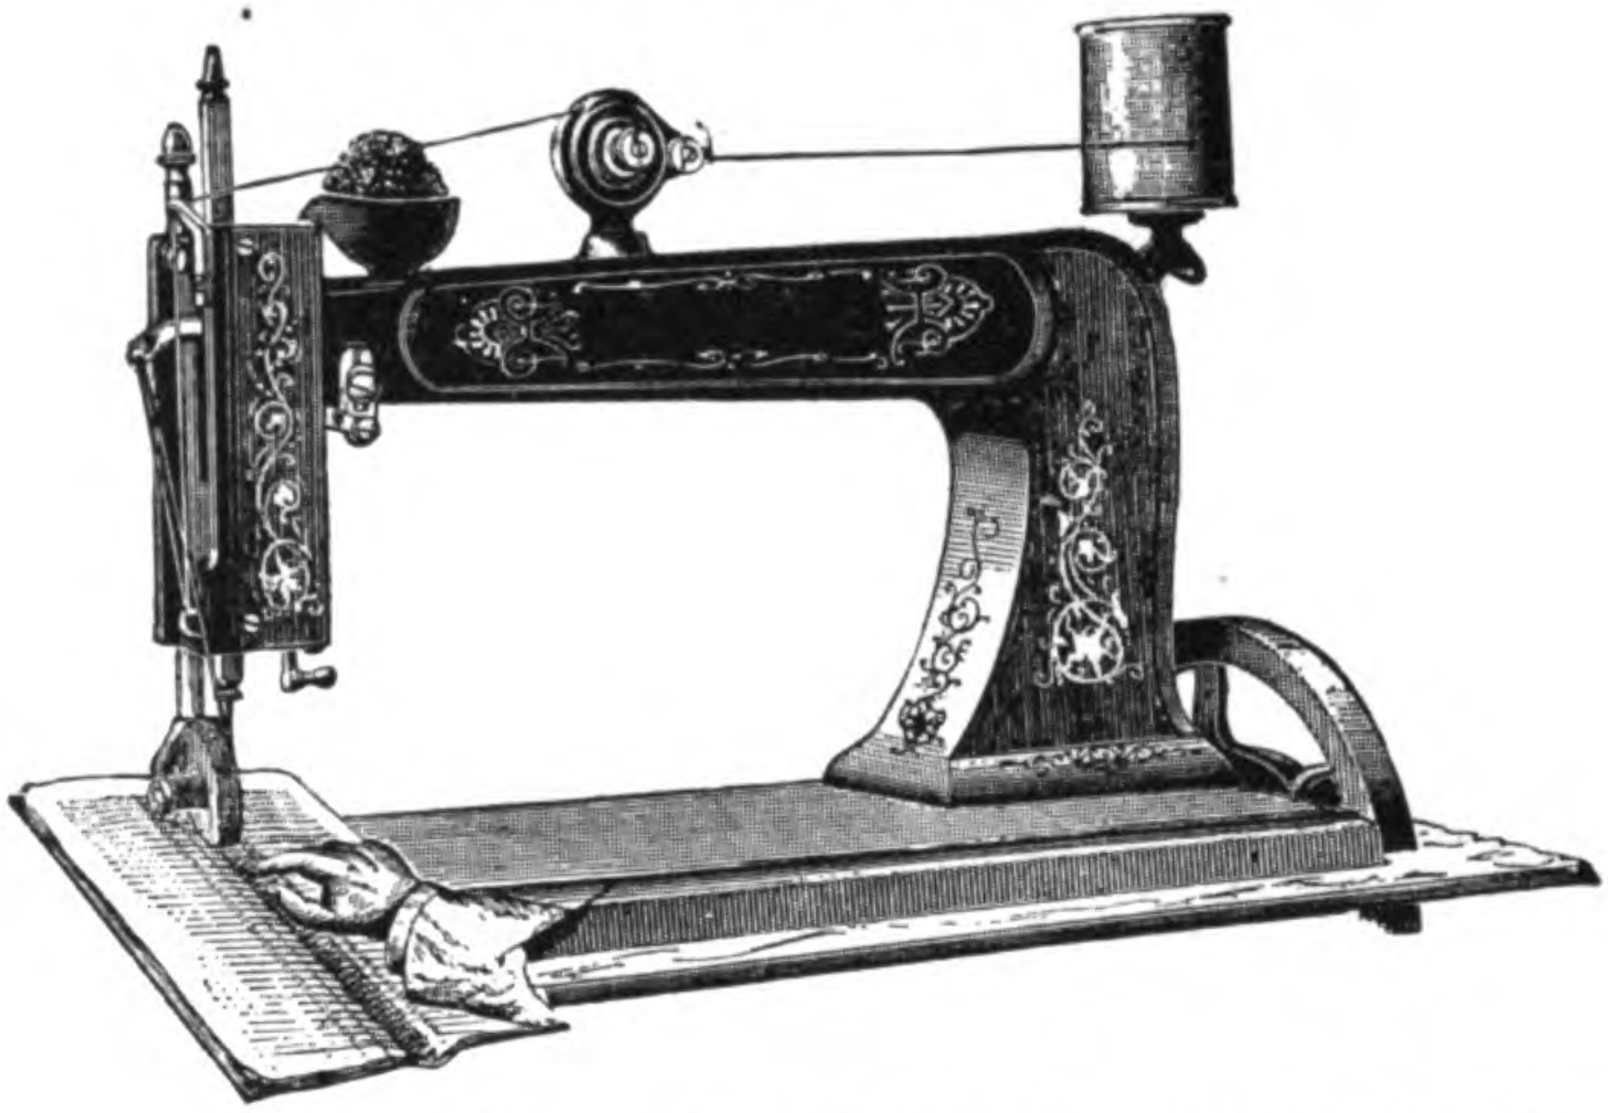
## TENNIS BOOK-SEWING MACHINE.



Designed for stitching blank books of every kind, and pamphlets and books not exceeding a thickness of three-eighths inch. Will sew through back or center, making stitches one-inch, half-inch, or quarter-inch long. Books sewed by this method are durable, and open perfectly. Sample work sent to us will be stitched and returned.

This machine is in use in almost every prominent blank-book factory in the United States.

In ordering steam power it is necessary to state diameter of shaft from which belt will be run to machine.

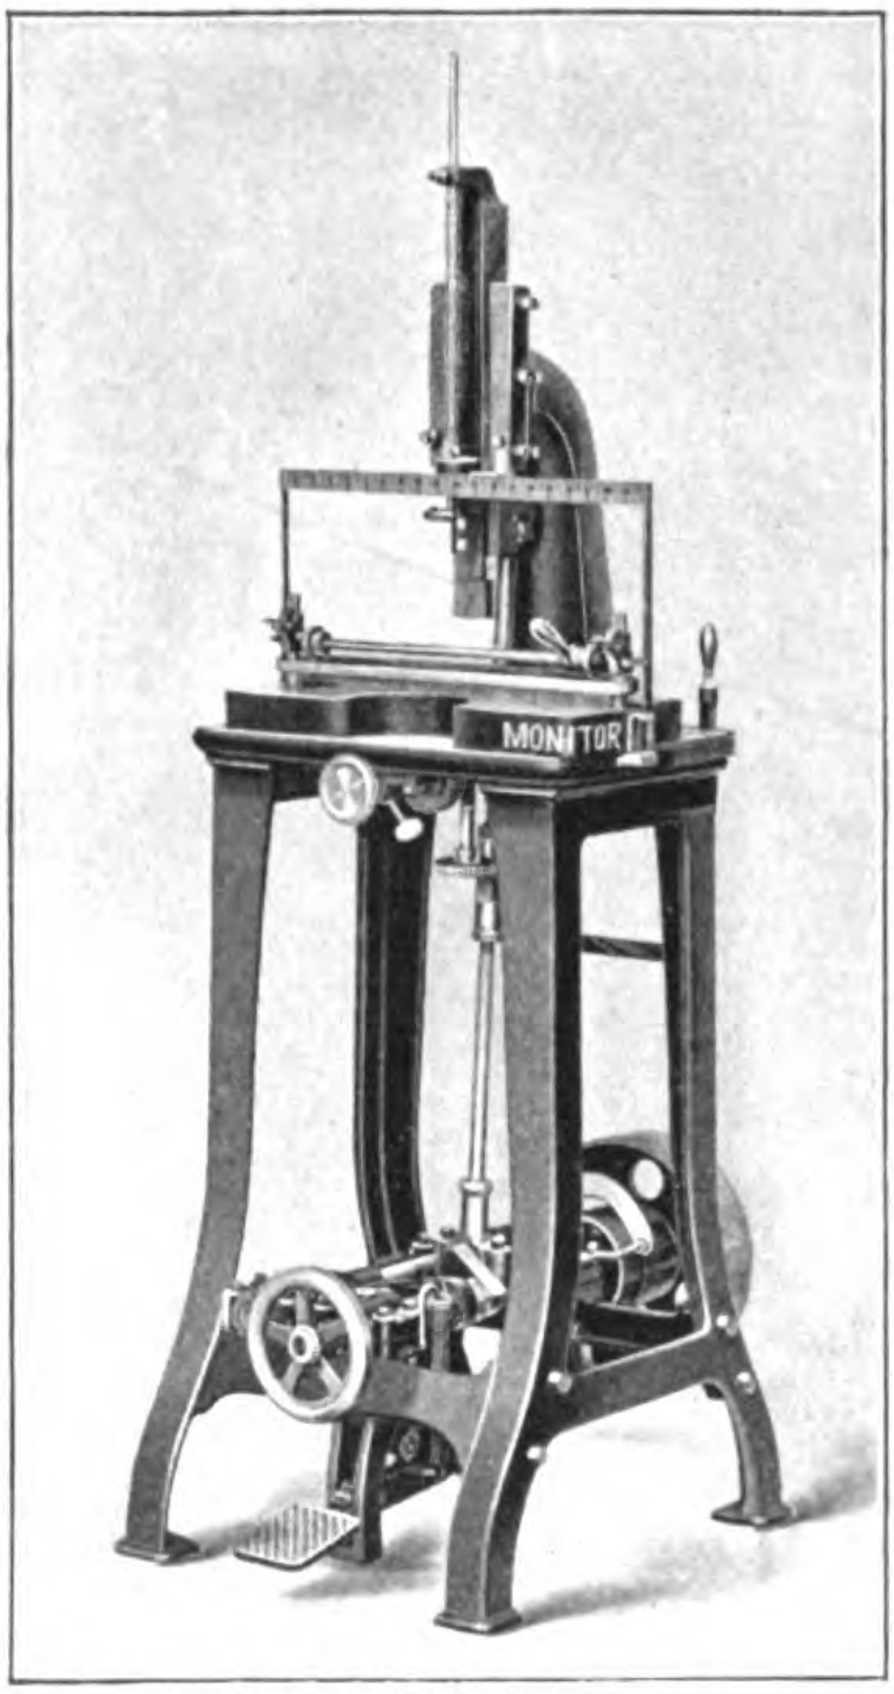
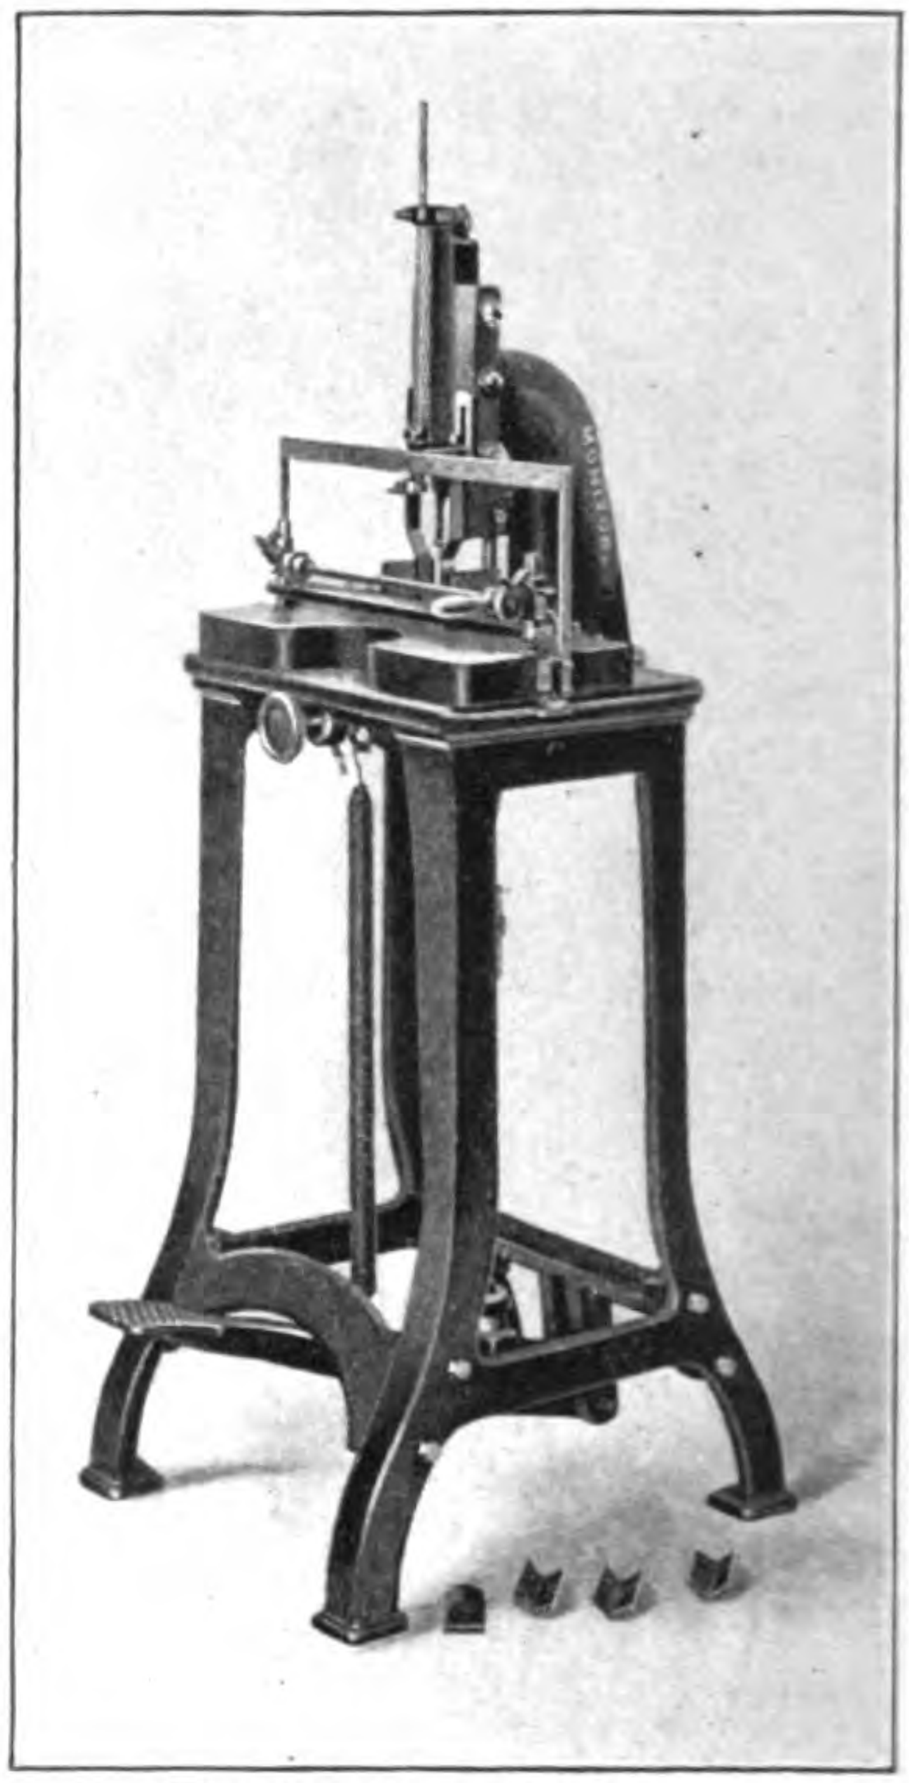
# MONITOR COMBINATION PUNCHING AND ROUND-CORNER AND INDEXING MACHINE.



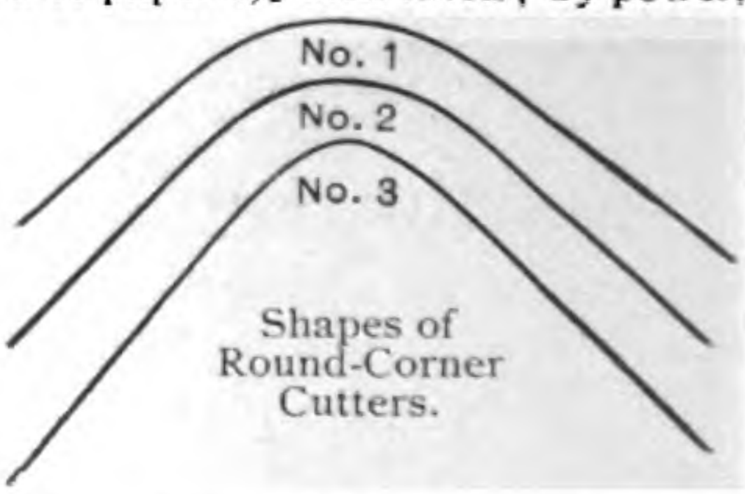
Complete, for Power, $180.00.



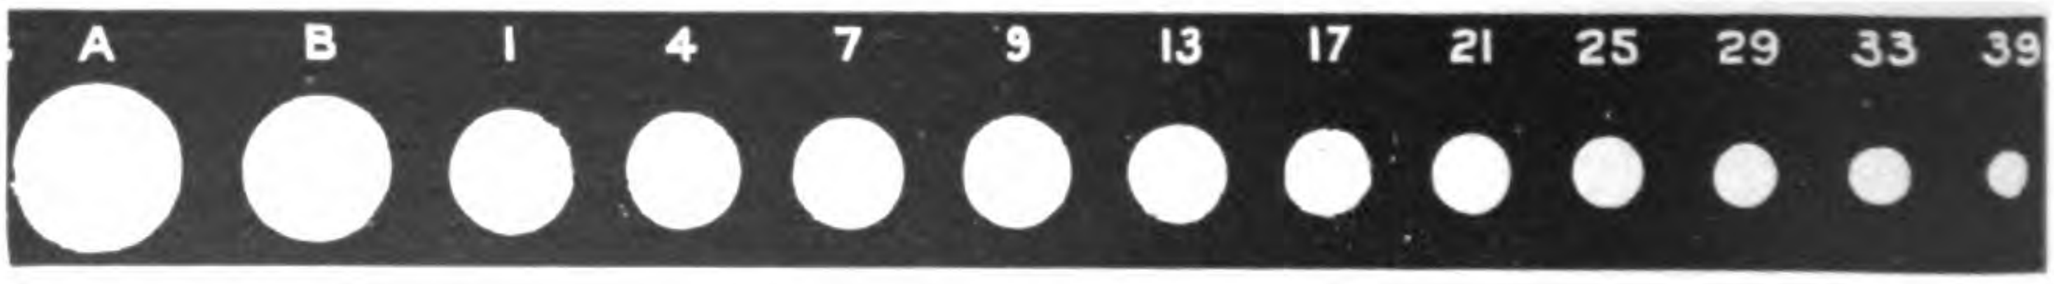
Complete, for Foot Power, $120.00.

A very desirable machine. By foot, it cuts easily through card or paper 1½ inch thick; by power, 3 inches. The table, besides having adjustable guides and a full-length clamp to hold the work during the cut, is movable from right to left, or *vice versa*, by means of a rack and gear operated by the hand wheel in front. A graduated scale and index above the table enables the operator to work quickly and with accuracy. The knives, Nos. 1, 2 and 3 (illustrated), or three of one No., are furnished with each complete machine.

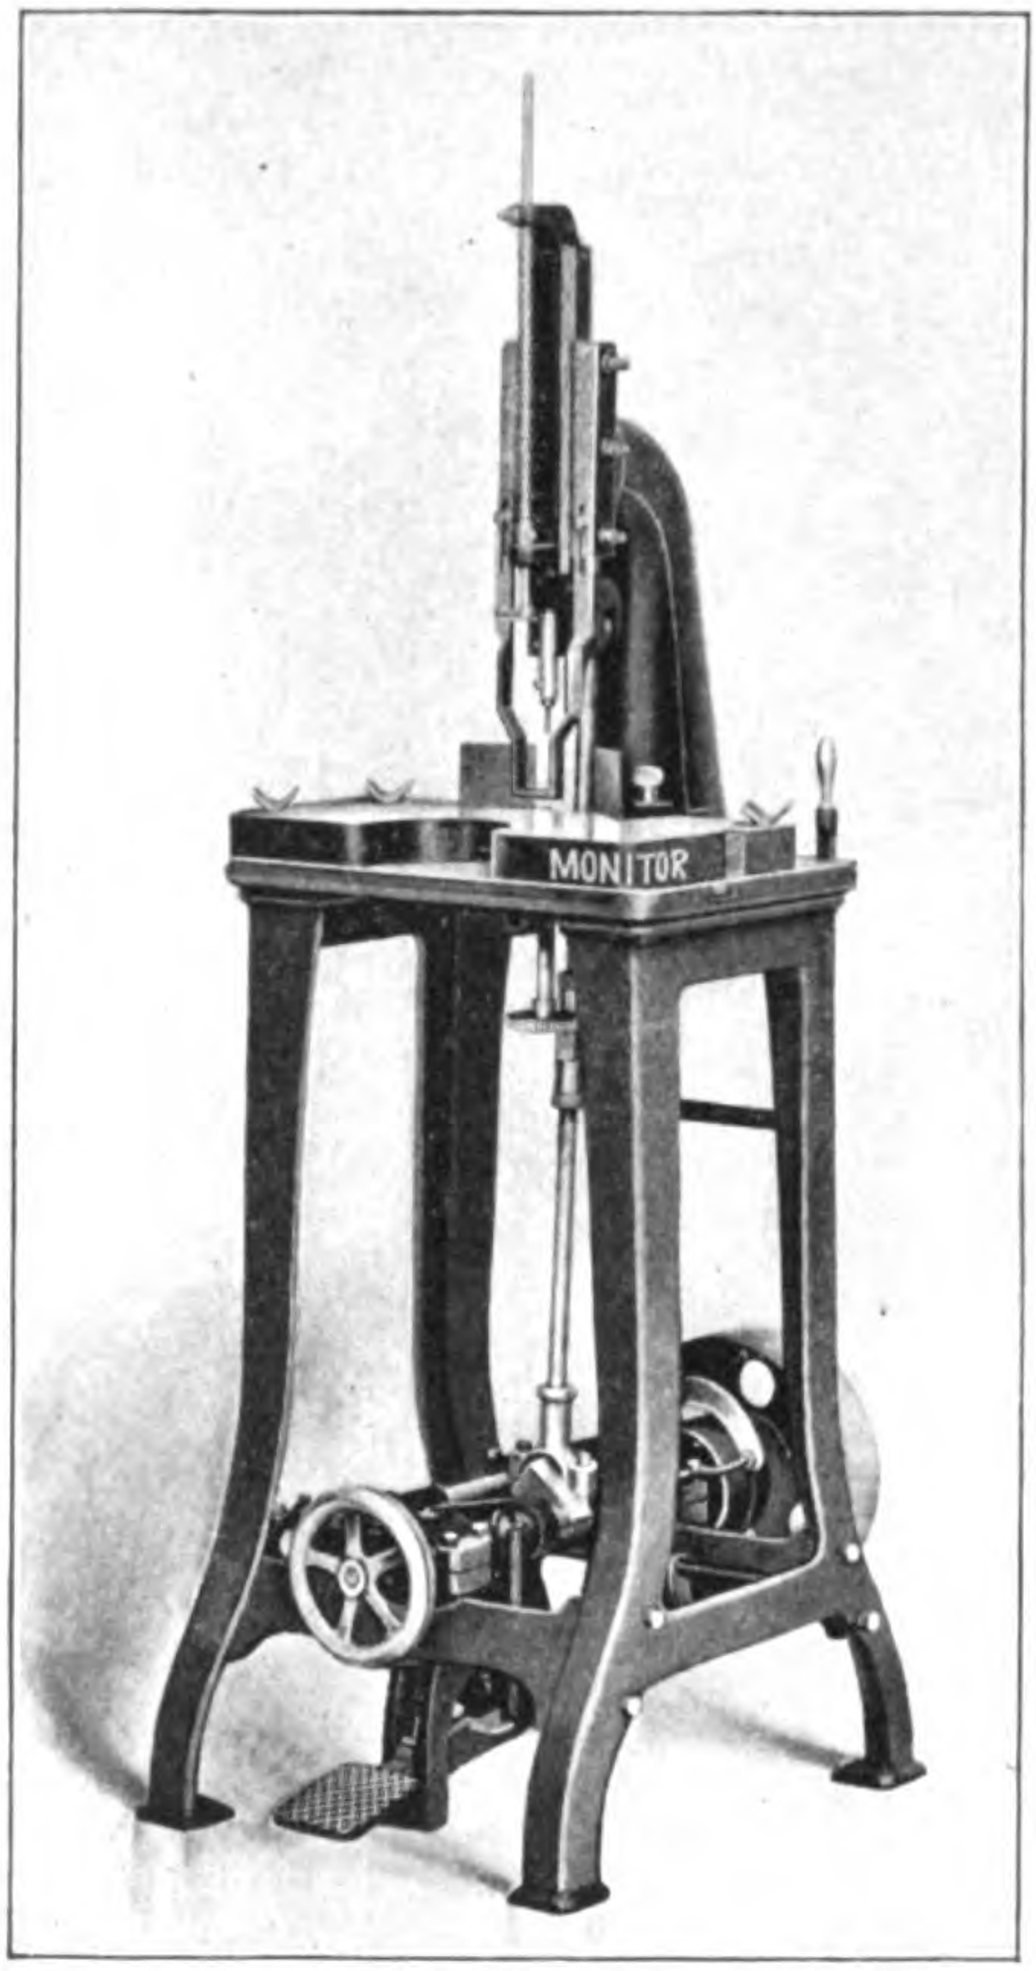
By removing sliding table and index scale, and substituting a punch or round-corner cutter for the index knife, this machine is easily changed into a punching machine or round-corner cutting machine. In ordering punches and dies be guided by following diagram, and order by number or initial on diagram.



Shapes of Round-Corner Cutters.



| | |
|---|---|
| For foot power, complete with sliding table and index scale, one index knife, one punch and die, and three round-corner knives; weight, crated, 435 lbs. | $120 00 |
| For power, complete with same attachments as above; weight, crated, 550 lbs. | 180 00 |
| Foot Power Indexing Machine, with round or square knife | 100 00 |
| Extra punch and die, per set | 2 50 |
| Extra round-corner knives, each | 1 50 |
| Extra index knives, each | 2 50 |



For Power.

## MONITOR JOB BACKER.

This has ample strength and is accurately fitted. It is extra heavy and reinforced at the corners. The boxes are phosphor bronze, and the screw and jaw are of steel.

| | |
|---|---|
| No. 1 takes 17-inch book | $70 00 |
| No. 1 takes 21-inch book | 75 00 |
| No. 2 takes 24-inch book, extra heavy | 85 00 |
| No. 3 takes 29-inch book, extra heavy | 95 00 |

Boxing extra.

**SPECIAL NOTICE.** — We are prepared to quote favorable prices for all kinds of bookbinders' machinery, new or second-hand. In writing for quotations time will be saved if the requirements of customers are very specifically stated.

## MONITOR PUNCHING AND ROUND-CORNER CUTTING MACHINES.

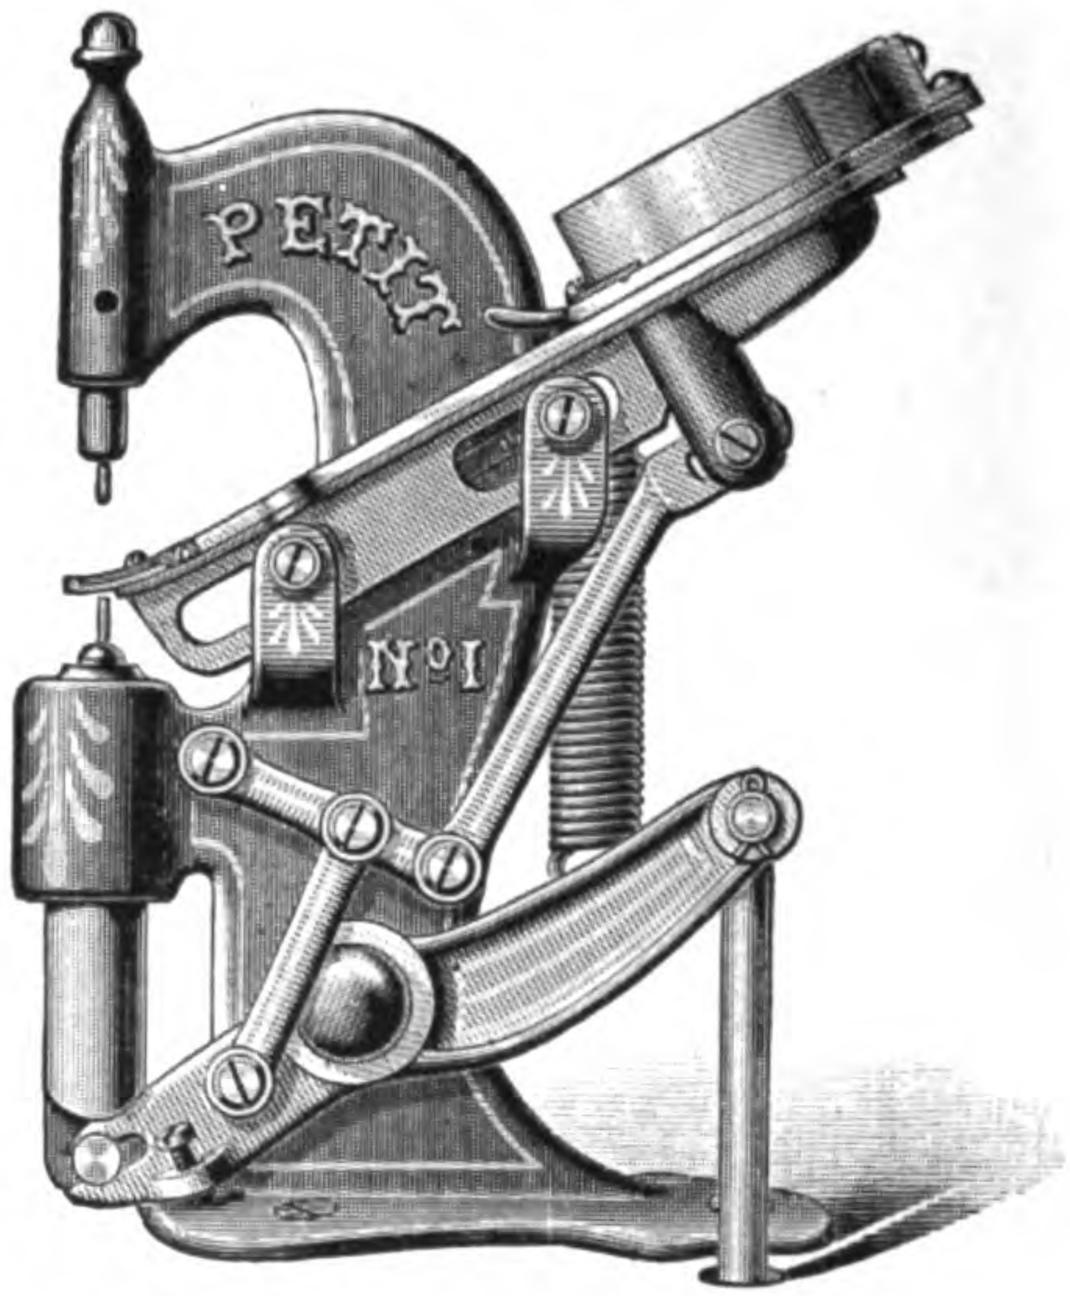
Furnished for power or foot power. With foot power will cut easily through card or paper 1½ inches thick, and with power through card or paper 3 inches thick. The cutter block is furnished of either wood or composition metal which does not injure the knives, and is so set as to be readily adjusted or removed. The head is rigid, and there is no spring or deflection in the punch or cut.

Order punches by the initials and numbers on the diagram printed on opposite page.

Each machine ordered for round-corner cutting is furnished with one each of the three knives illustrated on opposite page, or three knives of any one size, if desired.

| | |
|---|---|
| Foot Power Round-Corner Machine, with three knives (shapes of knives illustrated on page 954) | $75 00 |
| Foot Power Punching Machine, with one punch and die | 75 00 |
| Power Round-Corner or Punching Machine, heavier pattern, with extras as above, each | 135 00 |
| Round-corner knives, each | 1 50 |
| Punch and die, per set | 2 50 |

## THE PETIT FOOT-POWER EYELETTING MACHINE.



This is not recommended for the general work of printing offices and binderies, but is perfectly adapted to special work requiring eyelets not exceeding 3/32-inch inside, known as No. 1 "C. Z." It will take the smallest eyelet, 1/16-inch inside, known as "D. E."

It is a perfect feeding machine, 12 inches high, 9 inches deep, weighs only 17 pounds, and is very easy to operate.

No. 1. The Petit, with one Roadway . . . . . $30 00
Extra Roadways, each . . . . . 12 00

## EYELETS.

The largest eyelet used is "No. 3 Calendar," smallest is "D. E.," 1/16-inch inside. The eyelets in most common use are "No. 3 Calendar" and "No. 2 Skirt" (as illustrated). The prices of eyelets in large quantities vary from time to time, and special quotations will be given when required.

Smallest quantity sold 10,000 in one box, except No. 3 Calendar, which are put up in boxes of 5000. They are also packed in bulk cases containing 250,000 of any size.

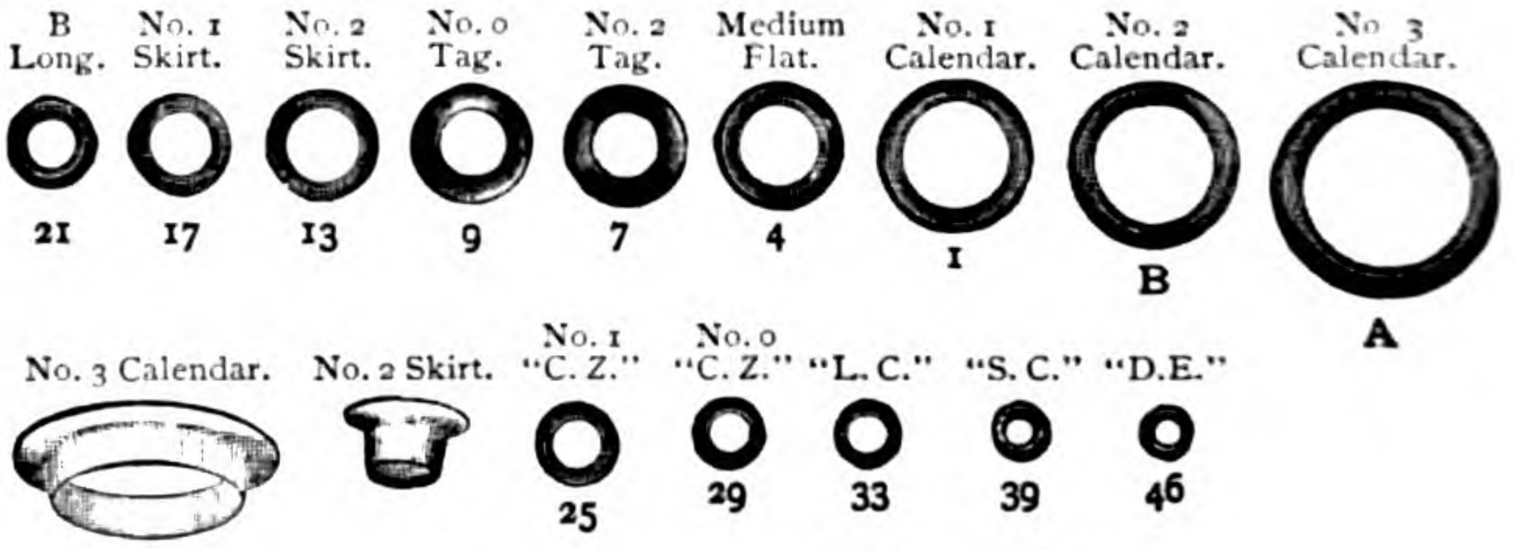
No. 3 Calendar Eyelets, per box of 5000 . . . . . $3 75
No. 2 Skirt Eyelets, per box of 10,000 . . . . . 4 50

Special quotations for larger quantities.

### Sizes of Eyelets.

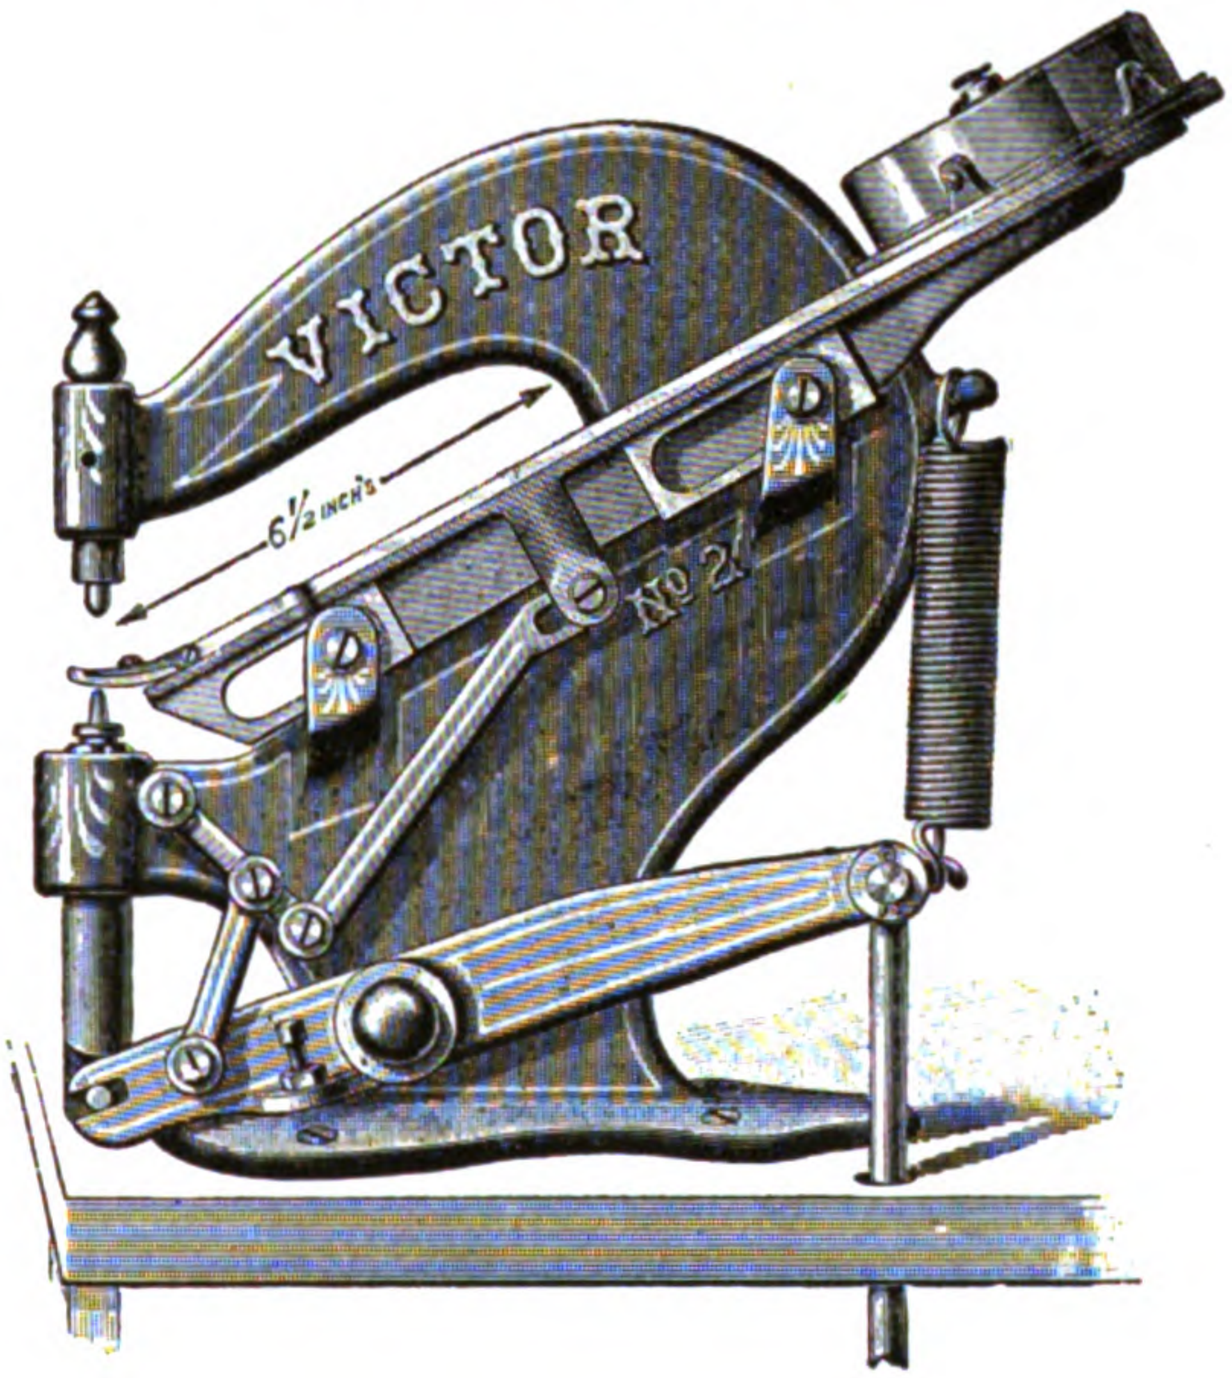
The cuts show exact sizes of each eyelet when set in the material eyeletted.

The heavy figures under cuts indicate the size of punch and die to be used with eyelets.



# SELF-FEED FOOT POWER EYELETTING MACHINES.

**With Removable Roadways.**



## THE VICTOR.

Has a reach from eyelet set to back of arm of 6½ inches, and will set an eyelet in the centre of a square 13×13 inches. Will set eyelets in paper, metal, leather, cloth, etc.

The eyelet roadway or feed channel is made to feed but one size eyelet; if other size eyelets are used on machine, an extra roadway is necessary. When ordering machine, specify by name the eyelet for which machine is to be fitted. If extra roadways are wanted, be particular to state the size of eyelet to be used. It takes only a few moments to change one roadway for another on machine.

The Victor is easy to operate, weighs 30 pounds, is 14 inches high, 15 inches deep, and is a perfect working machine and very durable.

| | |
|---|---|
| No. 2. The Victor, with one roadway | $40 00 |
| Extra roadways, each | 14 00 |
| Power attachments, extra | 40 00 |

In ordering, send samples of eyelets to be used, as the roadway will feed only one size of eyelet. An extra roadway is required for each size of eyelet.

## THE ROYAL.

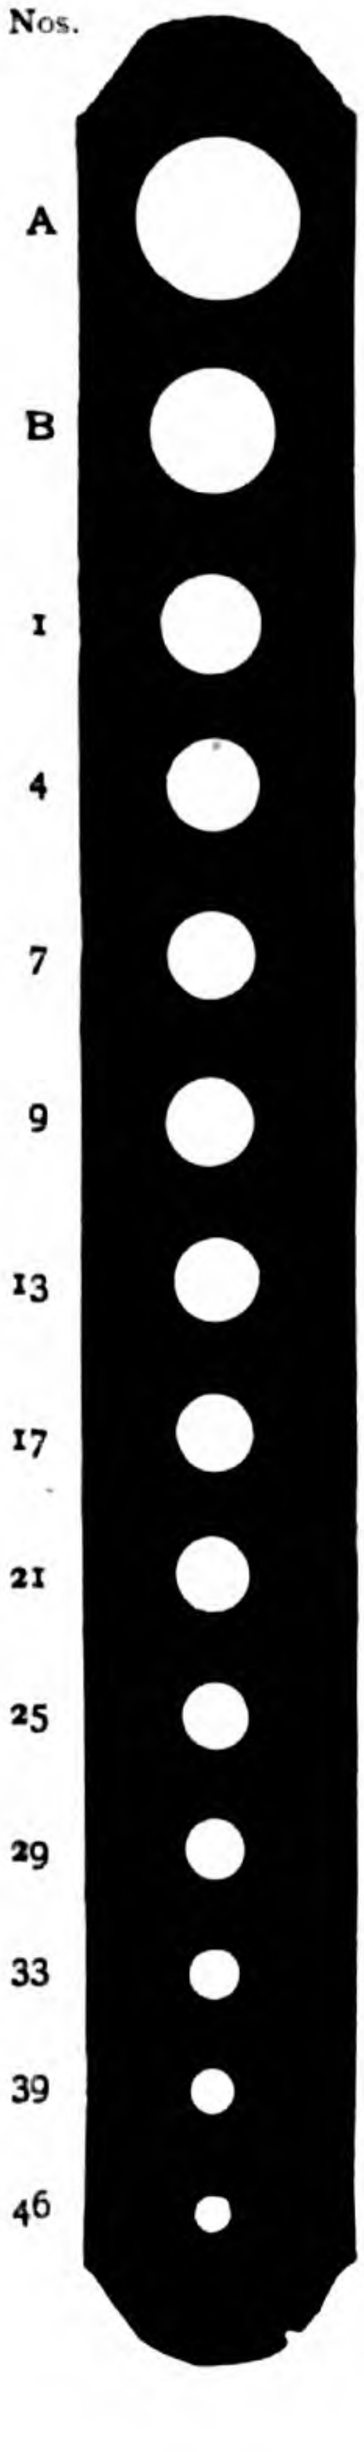
Differs from the No. 2 Victor in the reach only, which is 9 inches, setting eyelets in a square 18×18 inches.

It weighs 45 pounds, is 15 inches high, 16 inches deep, and is a perfect working and very durable machine.

| | |
|---|---|
| No. 3. The Royal, with one roadway | $45 00 |
| Extra roadways, each | 16 00 |
| Power attachments, extra | 40 00 |

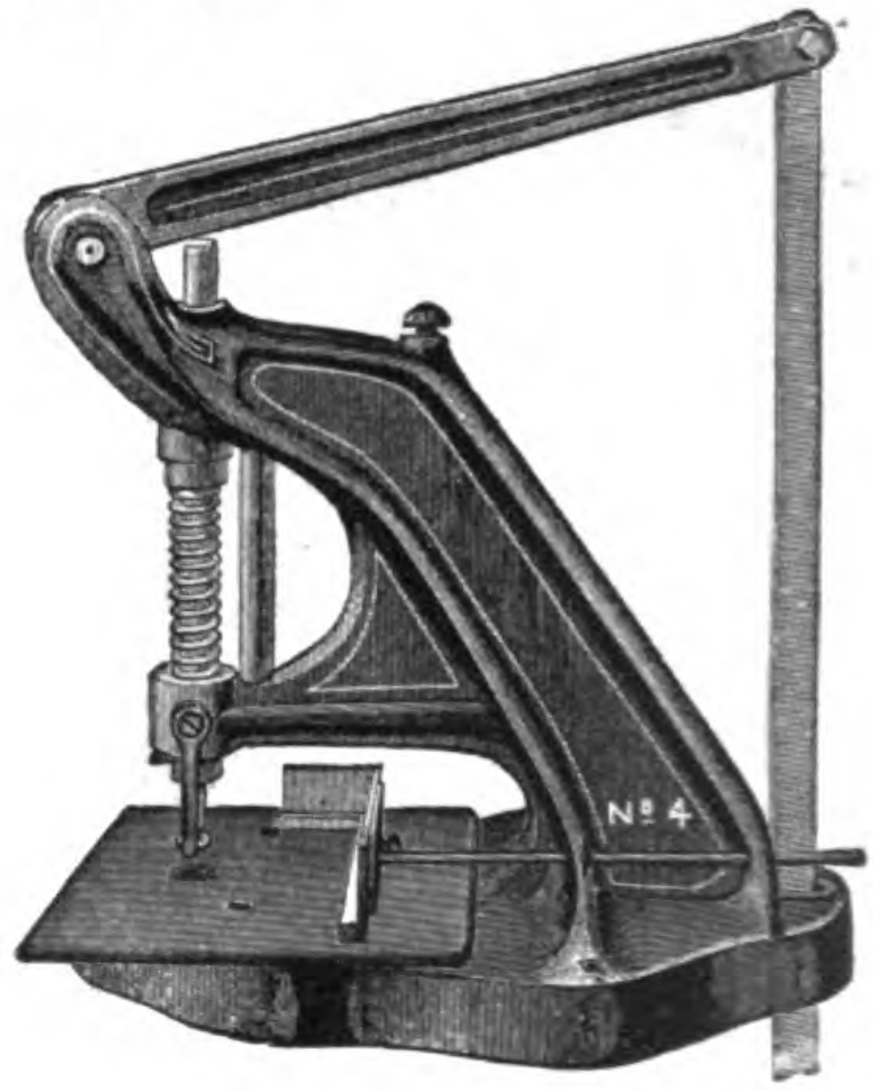
In ordering, send sample of eyelet to be used, as the roadway will feed only one size of eyelet. An extra roadway is required for each size of eyelet.

# No. 4 PUNCHING AND HAND EYELETTING MACHINE.



**Can be used for Eyeletting by Hand by Substituting Punches for Eyelet Sets.**

Punch and Die.

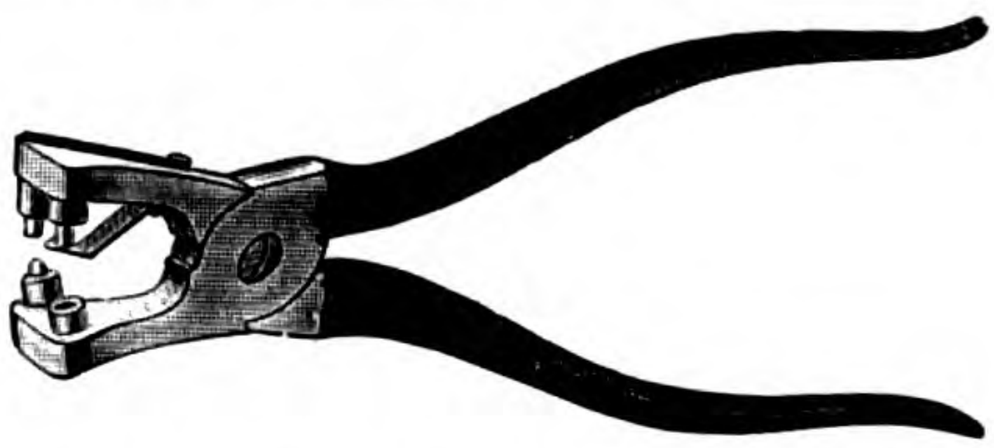


This is the proper machine to use with eyeletting machines shown on following pages. Except on cloth, good work cannot be done unless the hole is punched out *clean* before eyeletting. The No. 4 Machine will do work up to ⅜-inch diameter (No. 3 Calendar Eyelet) and has a reach of 6½ inches back of plunger, and an adjustable gauge for all kinds of work.

By removing the punch and die and substituting an eyelet set, this machine may be used for eyeletting by hand feed, and will do perfect work.

| | |
|---|---|
| No. 4 Punching Machine, with Treadle, and one Punch and Die | $20 00 |
| Extra Punch and Die, per pair | 2 50 |
| Eyelet Set, per pair | 2 50 |

## COMBINED EYELET PUNCH AND SET.

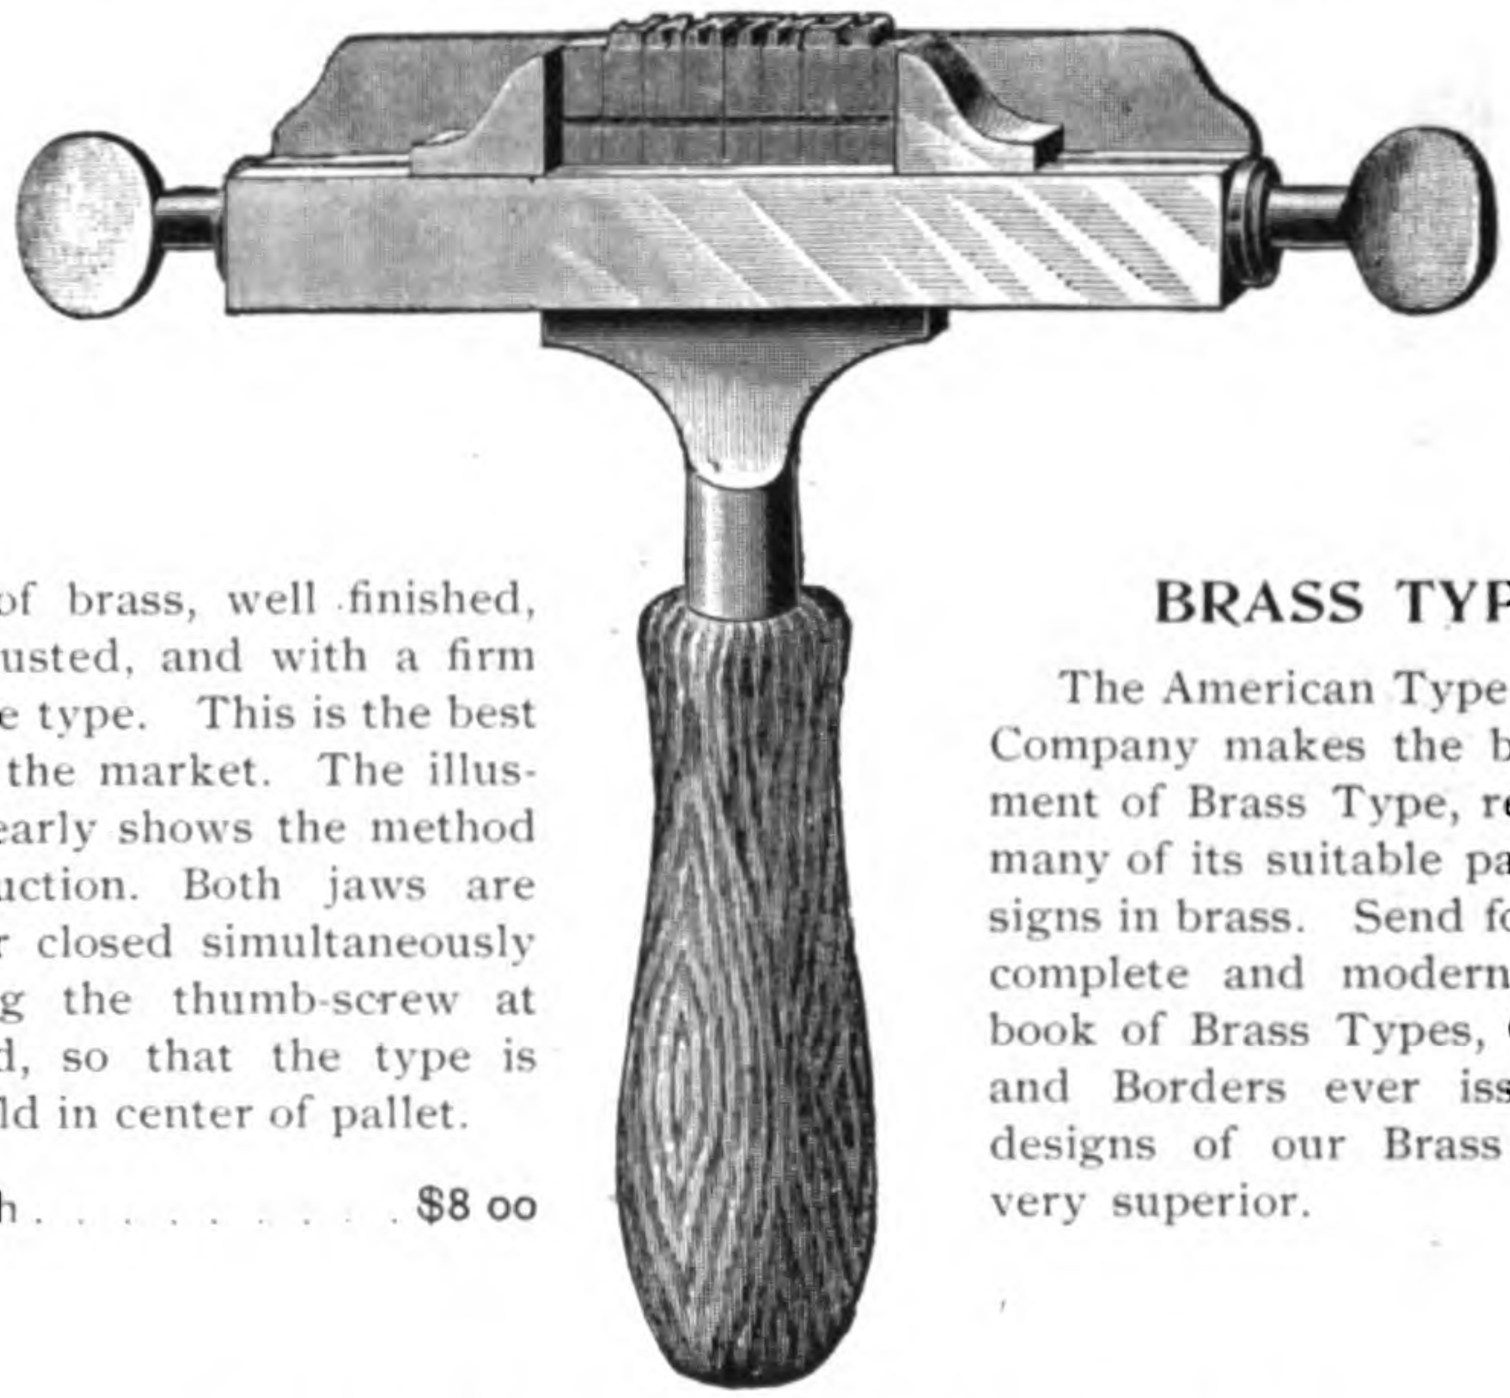


An indispensable tool in the printing office. Punches the hole and sets the eyelet. Takes only one size of eyelet (No. 2 Skirt).

| | |
|---|---|
| Price, complete | $2 25 |
| Eyelets, per box of 1000 | 0 50 |

Sizes of punches and dies correspond with eyelets made. Order by number.

## BOOKBINDERS' LETTERING PALLET.



Made of brass, well finished, easily adjusted, and with a firm grip on the type. This is the best Pallet on the market. The illustration clearly shows the method of construction. Both jaws are opened or closed simultaneously by turning the thumb-screw at either end, so that the type is always held in center of pallet.

Price, each . . . . . $8 00

## BRASS TYPE.

The American Type Founders' Company makes the best assortment of Brass Type, reproducing many of its suitable patented designs in brass. Send for the most complete and modern specimen book of Brass Types, Ornaments and Borders ever issued. The designs of our Brass Type are very superior.

## METAL TYPE FOR BOOKBINDERS.

*The Copper Alloy Type made by the American Type Founders' Company is of extra hardness, and better suited for bookbinding purposes than type made of ordinary type metal. All the type shown in the specimen books of the American Type Founders' Company is made of its famous Copper Alloy Metal.*

## BOOKBINDERS' CABINETS.

Made of hard wood, cherry finish, with bronzed pulls on each case. The cases are made in exactly the same style as printers' cases. These cabinets occupy a space of 20×20 inches, and may be put on or under a bench. "A place for everything and everything in its place" is a rule bookbinders should live up to, and these cabinets enable them to do so.

Cabinets with 6 cases . . . . . $ 8 00
Cabinets with 10 cases . . . . . 12 00
Cabinets with 15 cases . . . . . 16 50

### BOOKBINDERS' CASE.

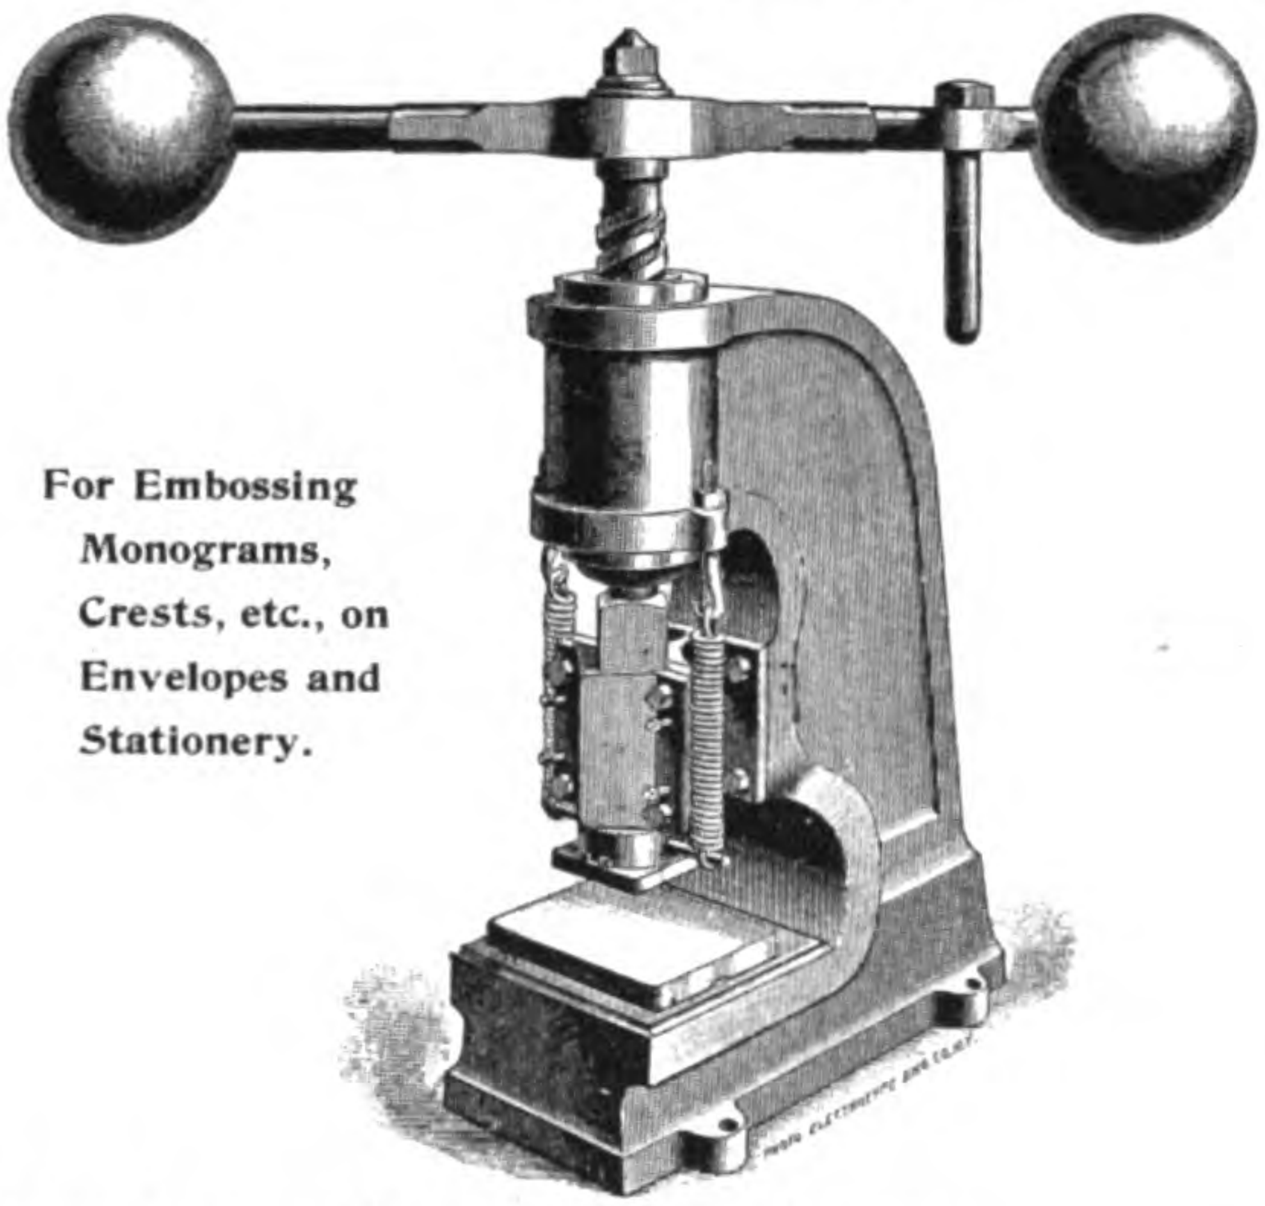
Case used in Bookbinders' Cabinet.

## HAND EMBOSSING PRESS.



**For Embossing Monograms, Crests, etc., on Envelopes and Stationery.**

Embossed work on envelopes, note paper, menus, and other fine stationery, is the most stylish form of printing. The process is simple. Dies cost from $1.00 to $5.00, according to elaboration of design. Dies are made of steel. The counter is usually made of bristol board, thin rubber cloth and thin paper, and is fastened to bed-plate with glue or gum arabic. The inks are made from dry colors, mixed with white damar varnish. The ink is smeared over the die, and the face of the die is cleaned of ink, and polished by rubbing on paper. Bronzed effects are obtained by embossing with varnish instead of ink, and dusting on the bronze; superfluous bronze is taken off by dusting with a brush. Any printer can do this work, and thus add a lucrative department to the business.

This press is the best made, and is used by all the leading houses.

| | |
|---|---|
| Large Press, with one Die-Box and Counter | $75 00 |
| Small Press, with one Die-Box and Counter | 60 00 |
| Extra Die-Boxes, each | 4 00 |
| Extra Counters, each | 3 00 |

Weight of large press is 335 lbs.; of small press, 190 lbs. Boxing, $1.50, net.

Those who have use for one press are advised to purchase the large size, as the other will only take small dies. Largest die taken on large press, 5 × 4 inches; on small press, 4 × 3 inches.

## FAST GOLD LEAF LETTERING AND STAMPING PRESSES.

Made in two styles. No. 1, illustrated here, is the best press of its kind for small stamping or embossing. Size of platen, 12 × 12 inches; size of head, 11 × 11 inches. The wheel at top carries the screw that raises or lowers the head, and the set screw at front binds it firmly. Can be supplied with 19¼ or 26 inches between uprights.

Three stamp-holders, varying sizes; one large chase, one large and one small plate for electros and brass work, one atmospheric gas heater, set of band holders, and assortment of steel fillers for chase, go with each machine.

The No. 2 press, for gas, gasoline or steam, is especially recommended for printing badges. In this press the bed does not slide, and the platen is raised or lowered by screws set in the side frames. Size of head, 12 × 12 inches; size of platen, 13½ × 13½ inches. Takes work 14 inches wide and any length.

The head will allow a change of six inches in thickness. One type-holder with chase, two plates for electros, one set of fillers, and an atmospheric gas heater go with each machine.

## CARVER & SWIFT POWER STAMPING PRESS.

**Prints and Embosses at One Impression.**

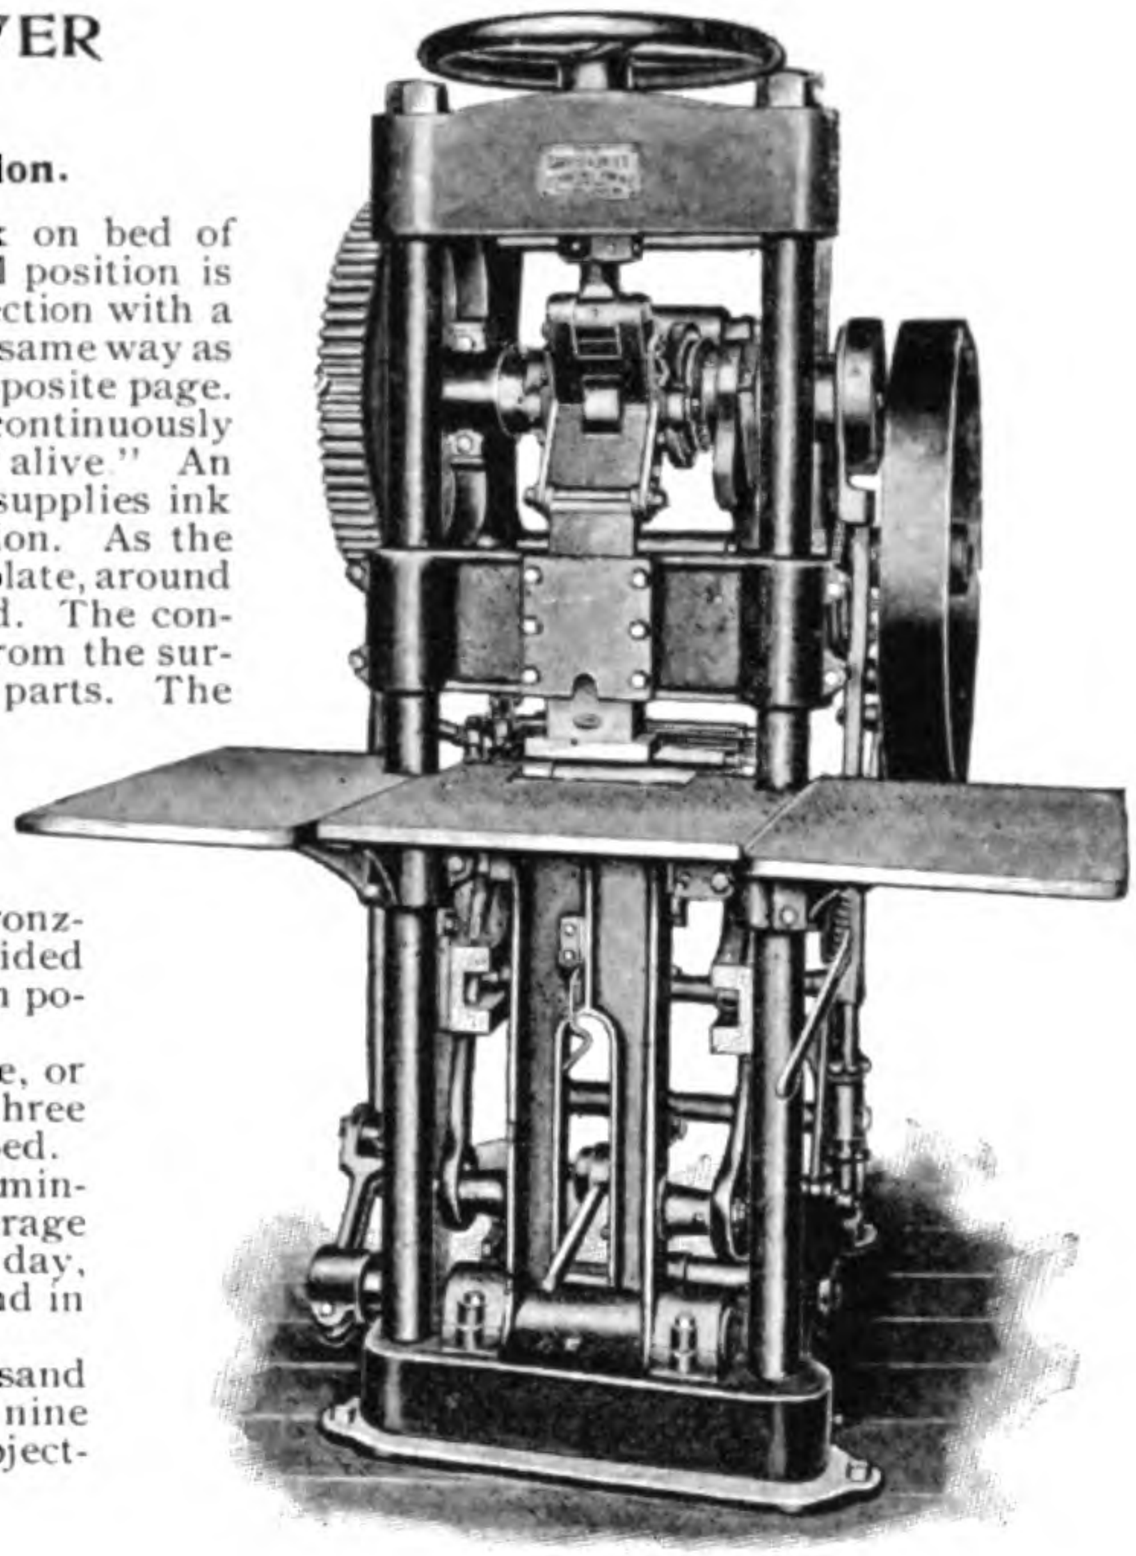
The die is held in a double-jawed chuck on bed of press; immediately over the bed in its vertical position is a counter-block, driven up and down by connection with a powerful toggle. The counter is made in the same way as on the hand-stamping press, described on opposite page. The ink fountain is at rear of press, having a continuously revolving roller which serves to keep the ink "alive." An oscillating arm carries the distributer, which supplies ink to the die on its backward and forward motion. As the die travels forward, it passes under the wiping plate, around which a web of manilla wiping paper is carried. The contact with the wiping paper removes all ink from the surface of the die, leaving it only in the engraved parts. The bed travels to a vertical position, where it is automatically locked and held for the impression. The sheets are fed to gauge pins as on a job press, and thus at one feeding beautiful results are produced.

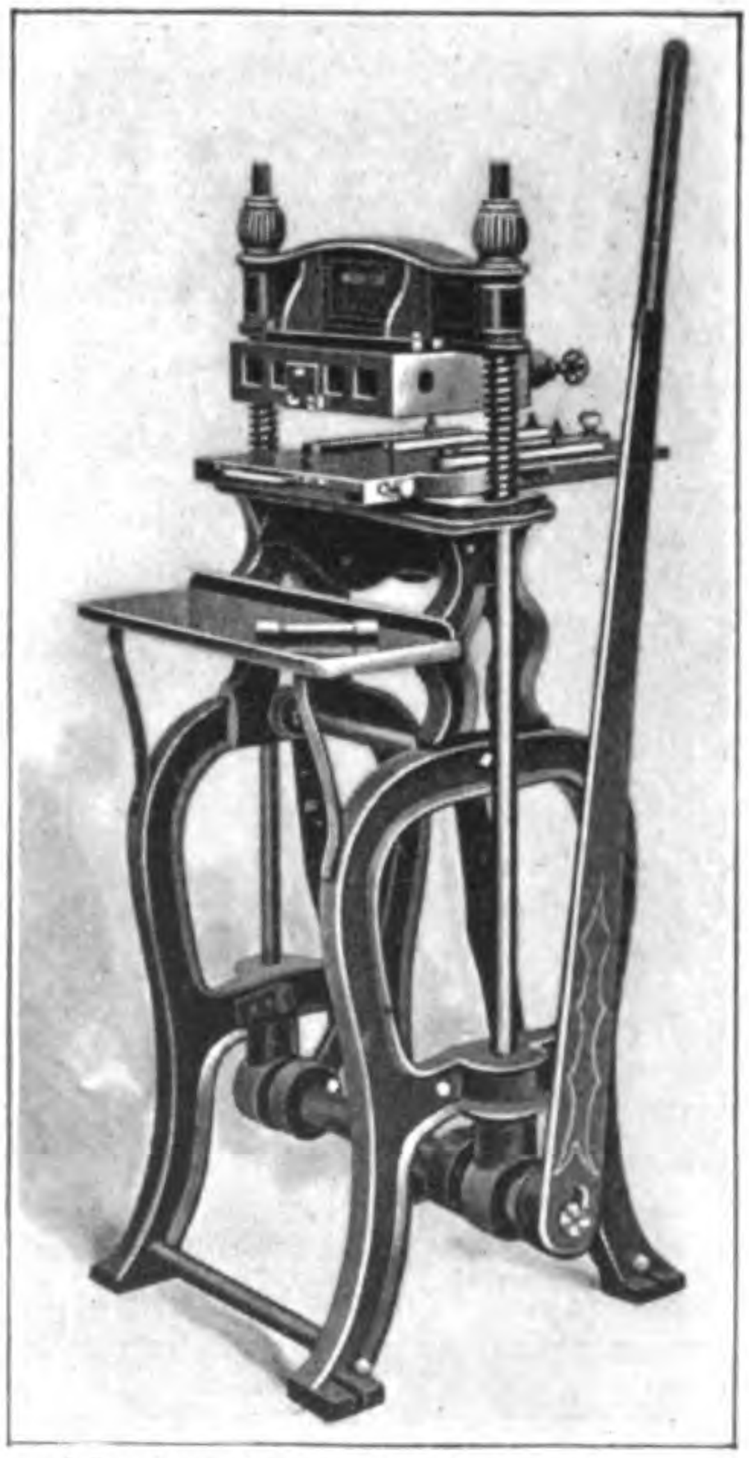
Perfect register is insured for burnishing bronzed work by the fact that the machine is provided with an automatic lock, which holds the bed in position while the impression is made.

Any properly engraved die from one line, or monogram, up to commercial dies measuring three and a half inches by eight inches, can be stamped.

The speed is a matter most generally determined by the operator, and while a general average would be about nine thousand impressions per day, the machine has a record of seventeen thousand in less than eleven hours.

The machine weighs about four thousand pounds and occupies a floor space of three feet nine inches by four feet six inches, exclusive of projecting feed boards.





Monitor Lever Embosser No. 2.

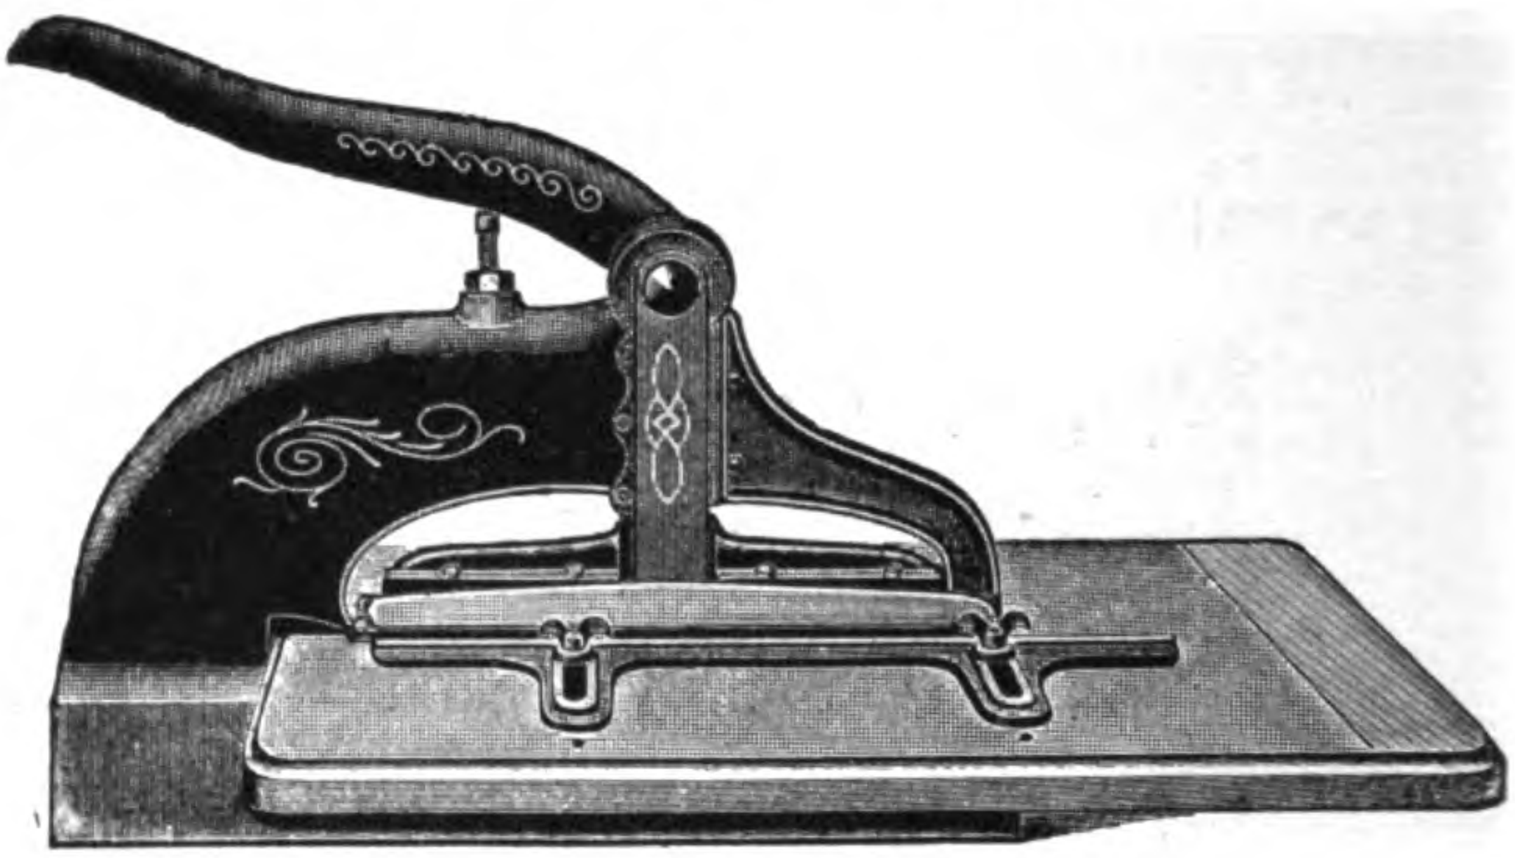
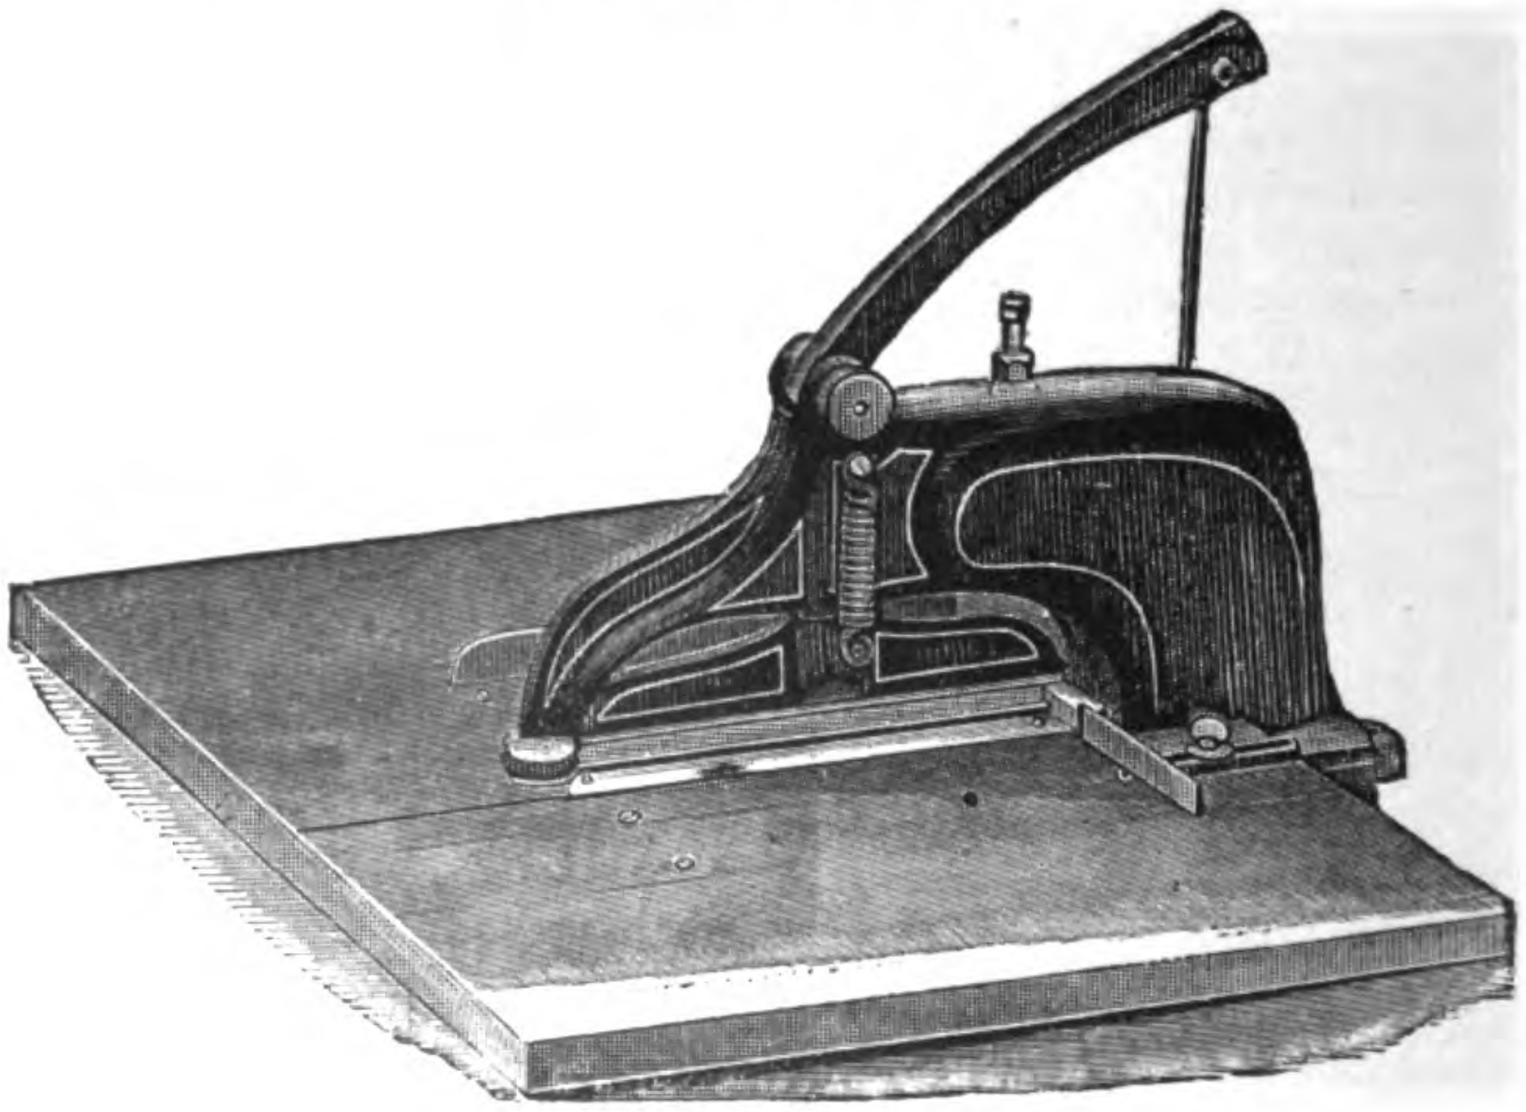
## FRANKLIN HAND PERFORATOR.



Perforates ten inches, and is provided with gauges on both sides, so that the sheets may be turned and fed in again, making a continuous perforated line of twenty inches. The pins make round holes, like the perforations on a sheet of postage stamps. Fifteen holes to an inch.

Hand Perforator, 10 inches . . . . . $25 00

## STIMPSON LEVER AND TREADLE ROUND-HOLE PERFORATOR.



In every respect a perfect and superior machine, in keeping with the reputation of the makers, and well worth the price asked.

# STIMPSON ROUND-HOLE PERFORATING MACHINES.

This illustrates the 25, 30 and 36-inch Stimpson Perforators.

This is conceded to be the best line of perforators made in the world. Nothing has been neglected in the way of good material, good workmanship and accurate adjustments, and consequently they do the best work, and wear longer than any other perforators. For those who keep a perforator in constant use an investment in one of these perforators will prove the most profitable, and will be found to keep up a perfect standard of work for many years. Power may be applied to any size.

These perforators are made to make two sizes of perforations—No. 60 gauge (15 holes to an inch), and No. 65 gauge (18 holes to an inch). The No. 65 gauge is the most satisfactory for checks, bonds, drafts, stubs and labels.

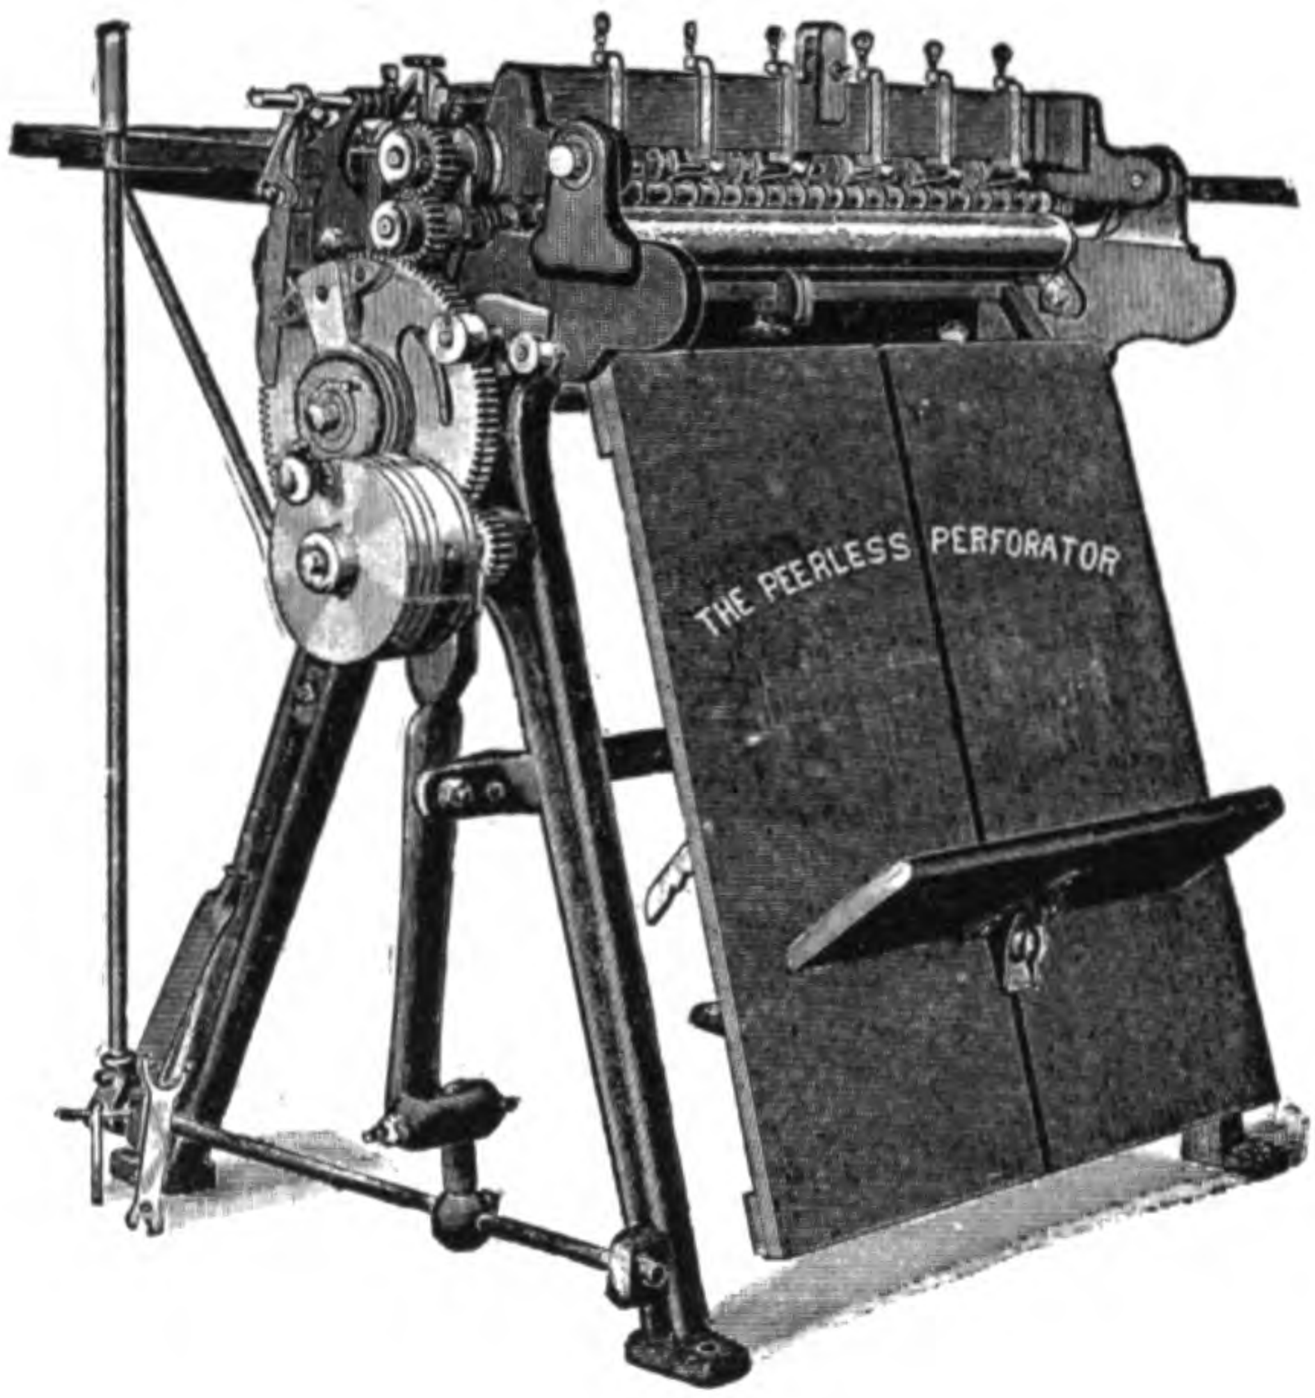
# PEERLESS
# ROTARY PERFORATOR.

**For Power.**



A thoroughly-tested, successful rotary power perforator, cutting six or less separate lines of perforations at a time, and provided with adjustable striking cams for skipping the perforations any distance, from the usual lengths of stubs to very short spaces. When the skip is as short as half an inch special fitting must be done, at a small extra expense. Accurate gauges, easily changed, are provided. The sheets deliver themselves after perforation into a lay-box, taking up very little room, and stacking the sheets regularly. Sheets are fed to machine as into a ruling machine.

Not the least remarkable feature is the form of the perforations, which are *cut out* of the paper cleanly, without any trace of burr, in oblong holes instead of the usual round holes. The machine will perforate a single sheet of manifold paper (without the usual aid of a thicker sheet) or heaviest manilla paper.

The oblong perforations are the distinctive feature of this machine. There is no displacement or swell of the paper along the perforated lines, and the clean cut of every hole, the absence of all burr, and the ease with which the paper separates through the perforations, commend the machine to all who aim to do the best grade of work.

This perforator is in use in a majority of the first-class manufacturing stationers and printing houses, and is built thoroughly well. All parts are interchangeable.

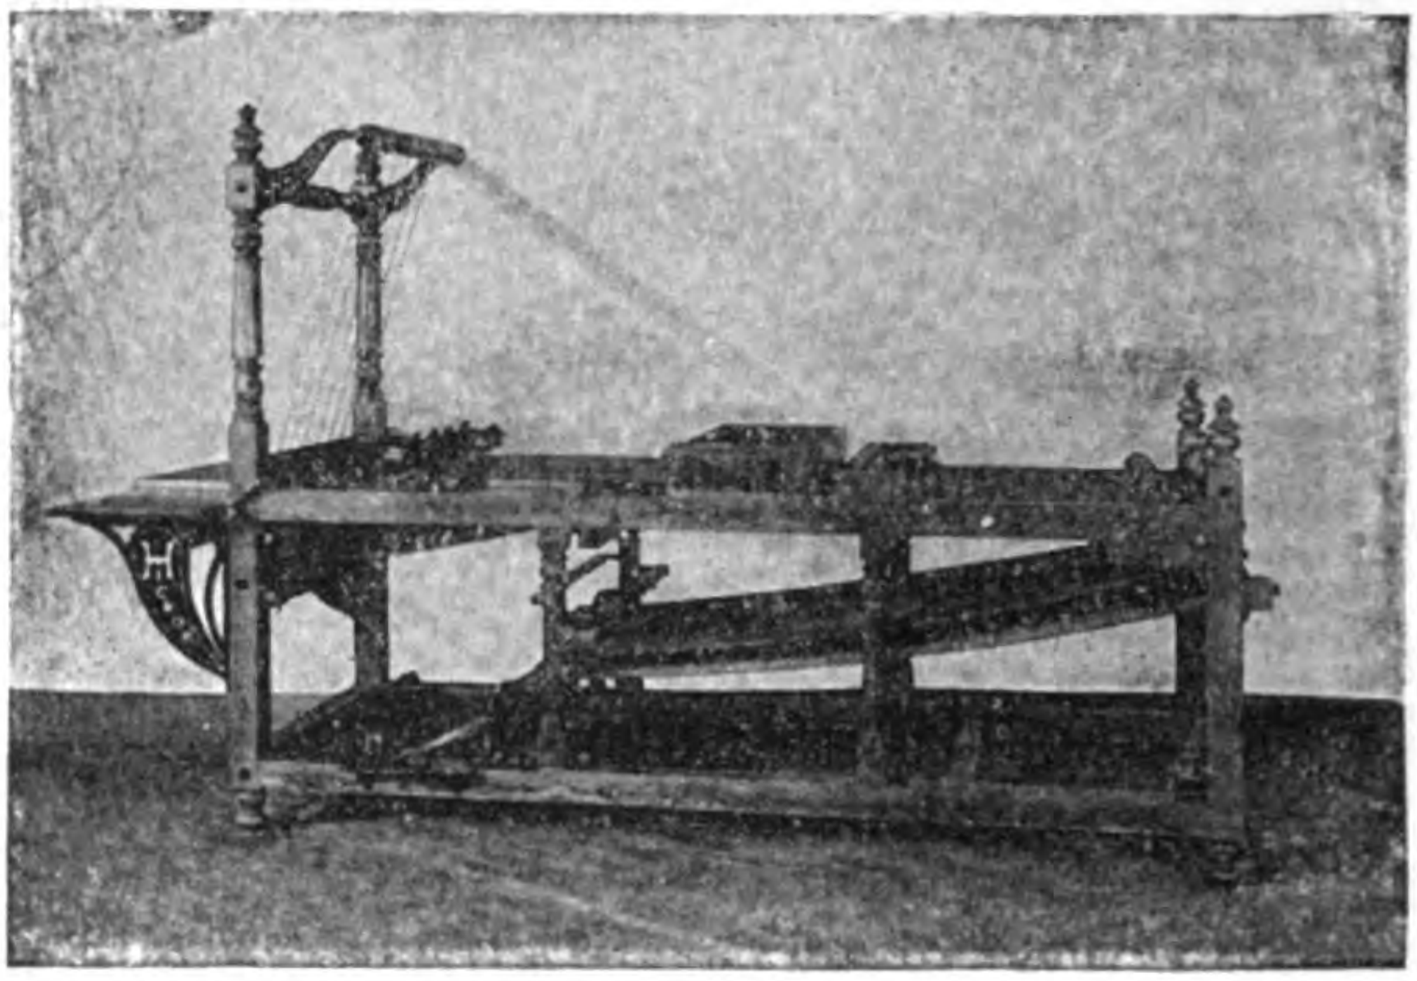
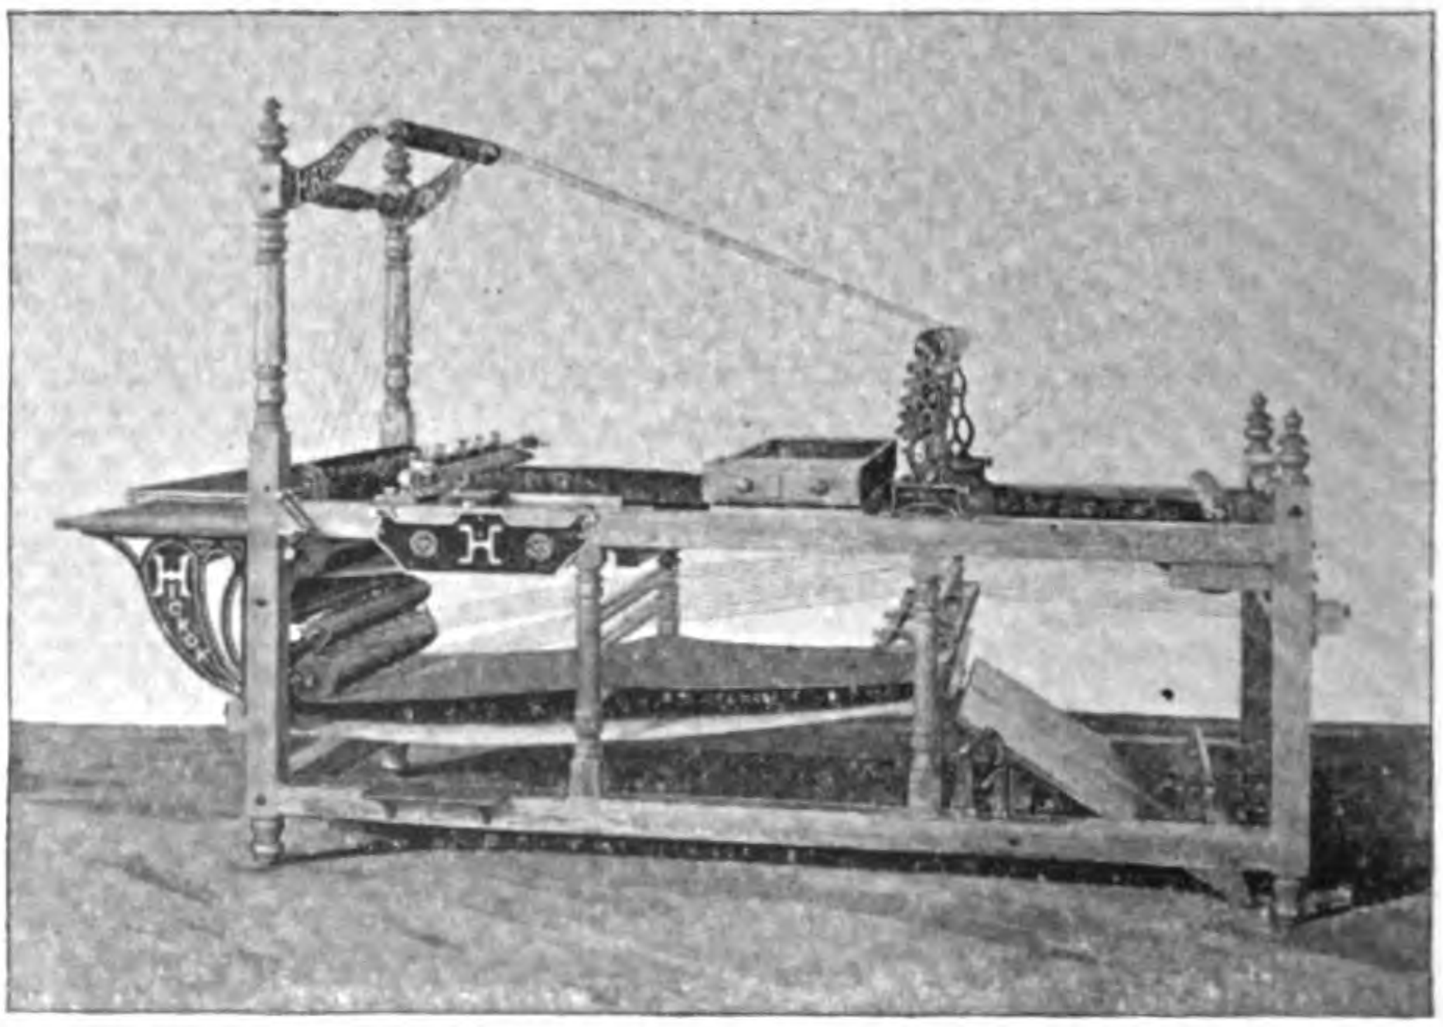
## STYLE 2-B HICKOK HAND STRIKER RULING MACHINE.



Designed for small shops, where ruling is not done very rapidly, and where, therefore, the ink has time to dry (though the carrier is short) after the paper has passed under the pens and before it drops into the receiving box at feeder's feet. So far as material and workmanship are concerned, there is nothing better made than Style 2-B. The difference between it and the higher-priced rulers is simply in the number of parts used. Striking is accomplished on this machine exactly as it is on the Style 1-A ruling machine. Paper drops into receiving box.

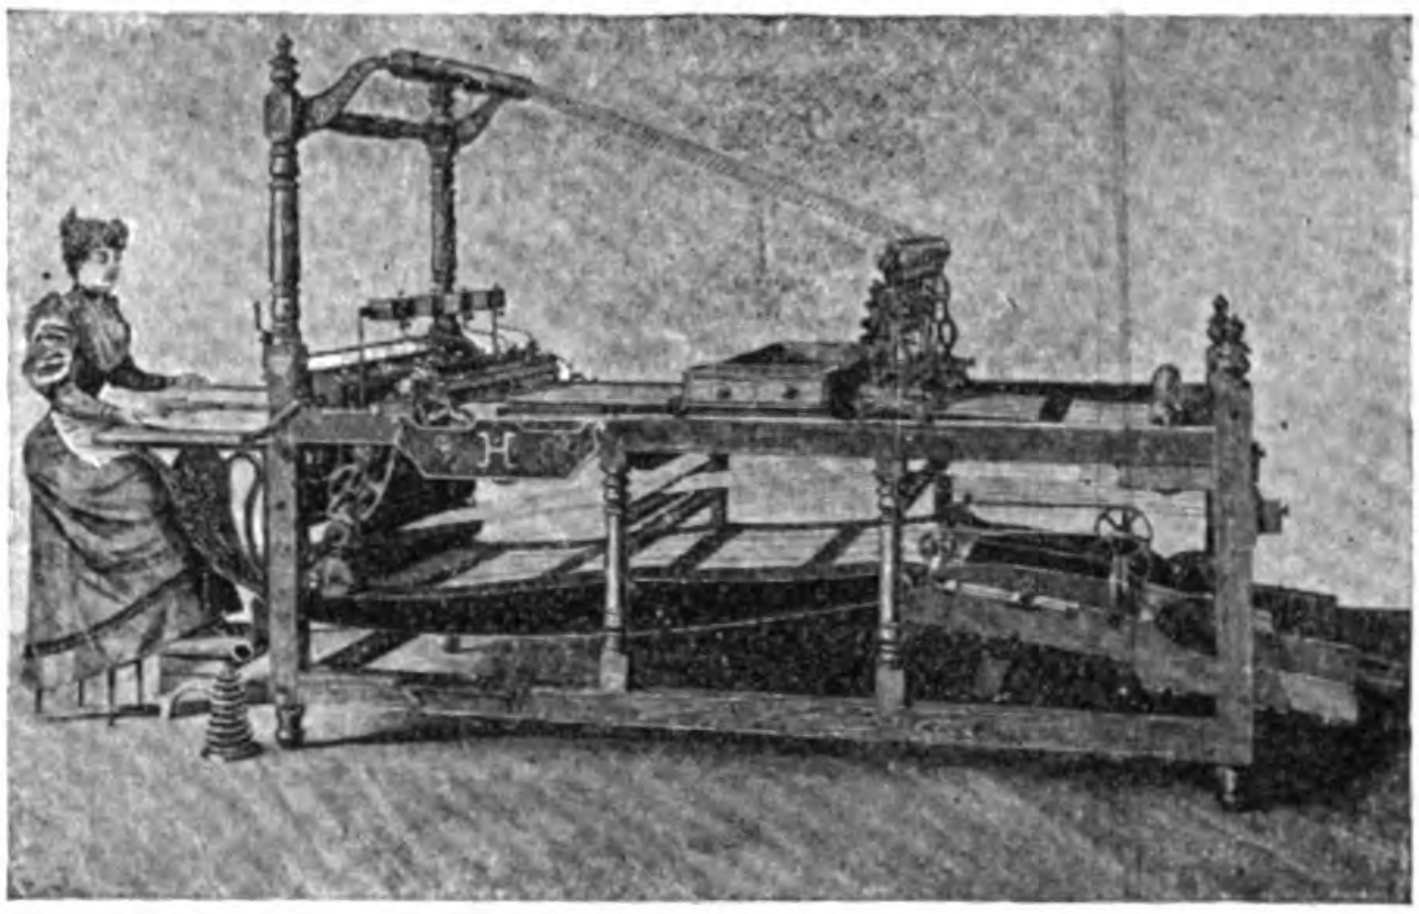
## STYLE 1-A HICKOK HAND STRIKER RULING MACHINE.



STYLE 1-A Ruling Machine is for use in shops where there is considerable faint or cross ruling, thus economizing the time of automatic strikers used in the same shop. It may also be used in small-sized binderies, where there is not sufficient work for an automatic striker machine. The operator turns the hand crank with the left hand, thus operating the machine by hand, while with the right hand the pen-beam is tilted up and down, doing hand striking. Power may be applied, and steam attachments are furnished to order at an extra charge. Style 1-A is as perfectly built in every part as the most expensive automatic striker ruling machine. The difference in construction is simply leaving off the striker parts and some other necessary pieces required on an automatic striker machine.

*For prices, see next page.*

# STYLE 1 SINGLE BEAM AUTOMATIC STRIKER RULING MACHINE.



STYLE 1 is used for faint or cross-lining when the striker is not operated, and also for down ruling from cross or head lines when the automatic striker is used for the purpose of leaving unruled head spaces by automatically raising the pens from the paper and allowing them again to descend upon the paper, the pens beginning to rule immediately upon touching the paper at a cross head line, and again being automatically raised from the paper and lowered upon the paper again successively at distances prearranged by the positions of the cams, which are adjusted by the operator, who sets them in the circular-revolving cam-head. This machine is for use on all classes of job ruling.

The illustration shows the combined lay-boy and receiver—a device for receiving the paper (after it is ruled) in the lower portion of the machine. Gears are used in setting the striker—friction devices being avoided because gears are more positive in the correct delivery of both speed and power.

## UNION TABLETING APPARATUS.

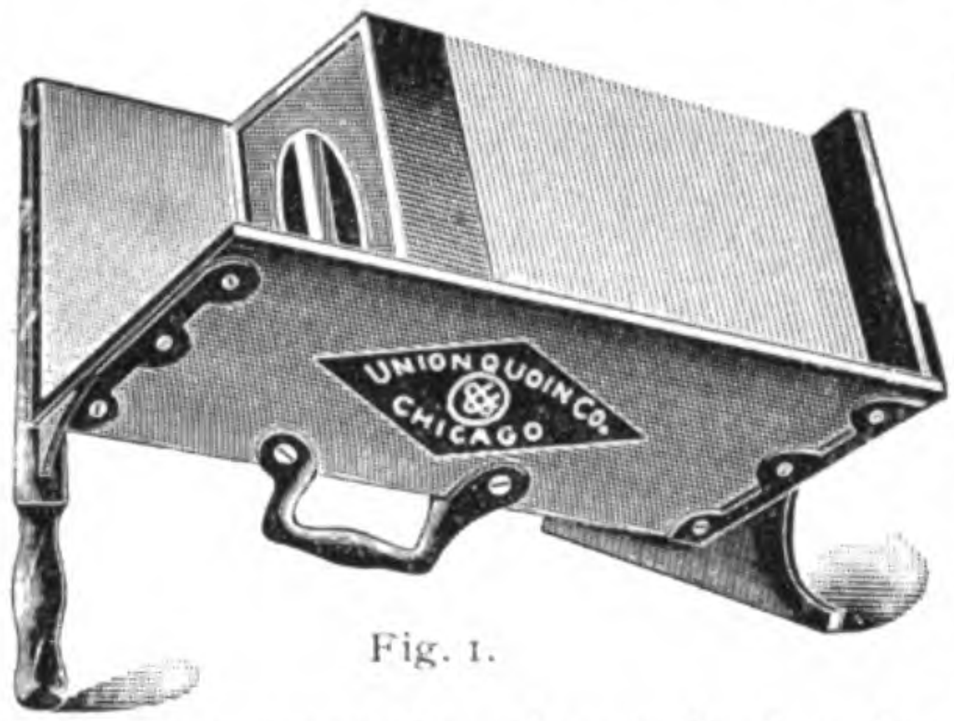

Fig. 1.

In this apparatus paper is held for padding without the use of screws or clamps. The trough (Fig. 1) is V-shaped, and is held at an angle which holds the paper snugly against the sides and the iron base-plate, which forms the bottom of the trough when it is tilted up. The paper in the trough is held under pressure by a heavy iron weight or brick; the trough is tilted up, and is lifted away, leaving the iron base-plate, paper and iron brick as in Fig. 2. The advantage this method has over the tablet presses using clamps is that, by buying extra base-plates and iron bricks, an unlimited number of piles of paper may be put up without waiting for the drying of the cement; thus the capacity of this apparatus surpasses that of other apparatus used for a like purpose, and is equally as well adapted for use in both large and small establishments.

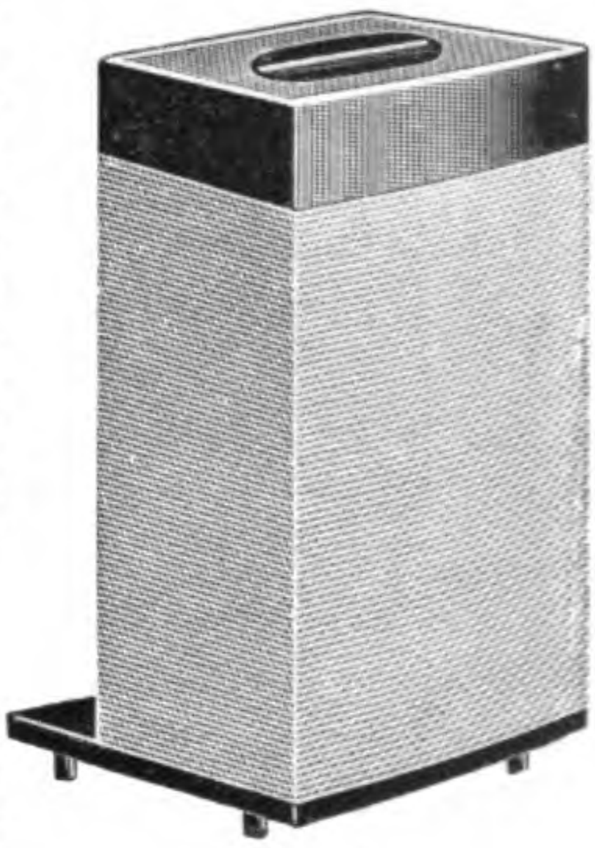

Fig. 2.

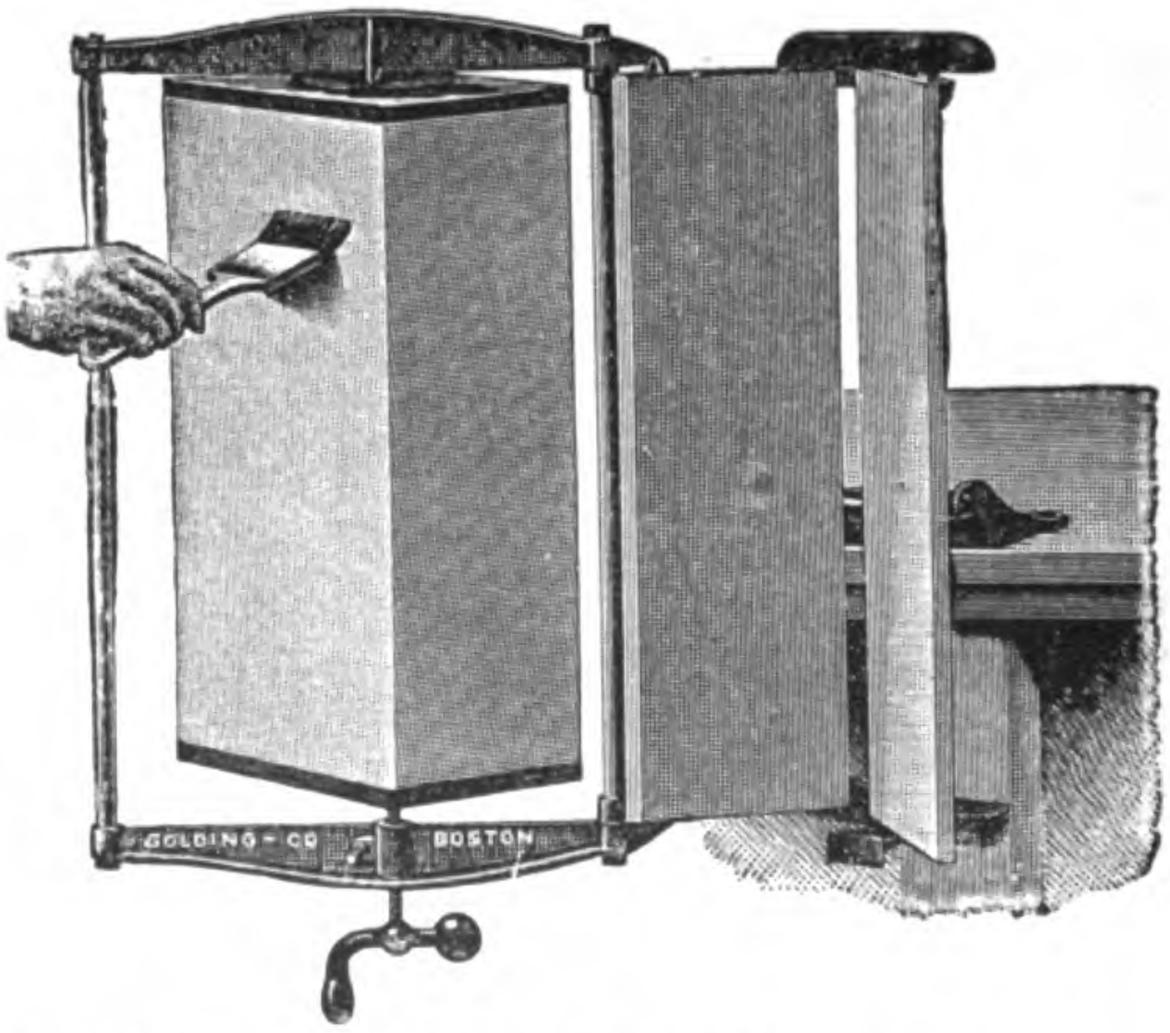
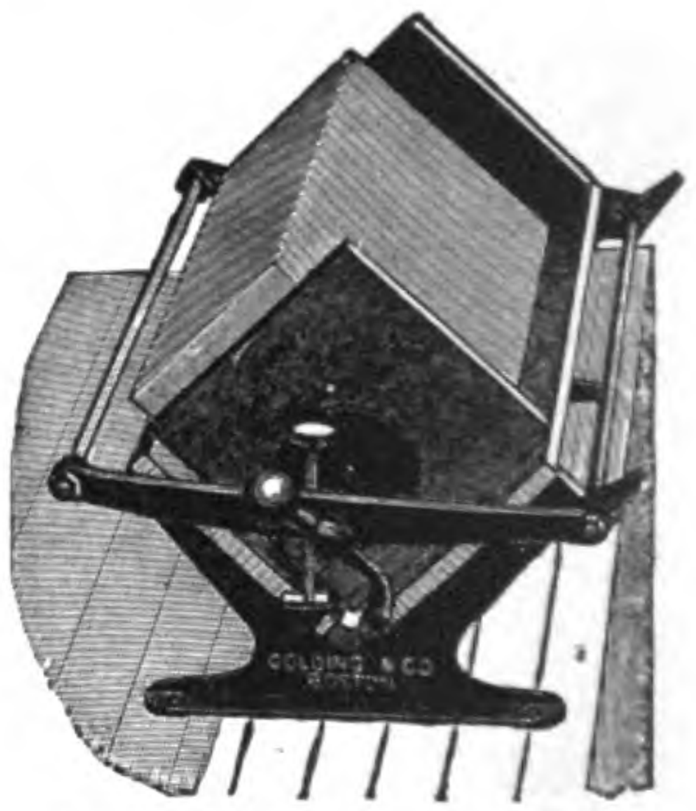
Complete, with trough, base-plate and hollow iron brick, size 8½×8½×18 inches; capacity, 6000 sheets . . . . $7 50
Extra iron bricks, hollow, each . . . . . 2 00
Extra iron bricks, solid, each . . . . . 3 00
Extra iron base-plates, each . . . . . 0 75

## GOLDING TABLET PRESS.



No. 2 Golding Tablet Press filled with paper and cement being applied, in a perpendicular position.



No. 1 Tablet Press on bench, filled with paper.

The paper is put in the V-shaped trough between boards, and, after sufficient pressure has been applied by the screw in the end of a hinged clamping frame, the latter is swung over, exposing the underside of the paper for cementing. Pads from 2×2 inches up to full capacity of the press may be blocked. The No. 2 press has a hinged bracket by which it is screwed to a bench, and which permits the paper to be held in a perpendicular position after clamping.

No. 1, will hold 2000 sheets, any size up to 6×12 inches . . . . . $6 00
No. 2, will hold 5000 sheets, any size up to 8×16 inches . . . . . 12 00

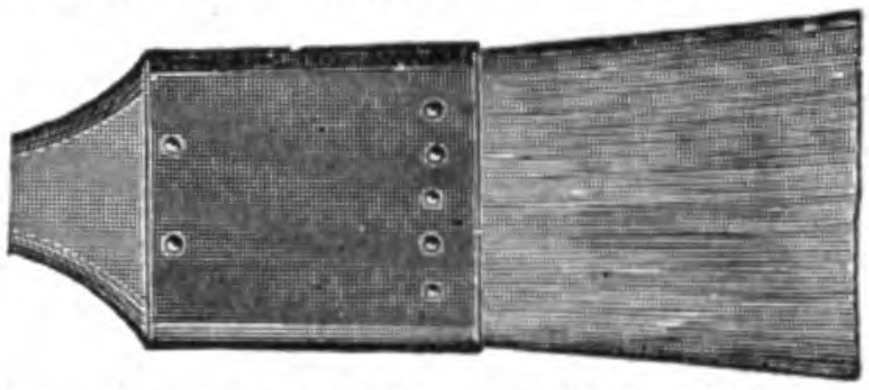
## BINGHAM & RUNGE LIQUID PADDING GLUE.

**Made in Red, Purple, Green and Colorless.**

The Bingham & Runge Padding Glue was the first put on the market, and it has always maintained its reputation. The best materials are used in its composition, and on this account it does not get rancid. A quart will cement about 100,000 sheets of note size.

| | | | |
|---|---|---|---|
| Half-Pints . . . | $0 35 | Quarts . . . . | $1 00 |
| Pints . . . . . | 0 60 | Gallons . . . . | 3 75 |

## LIQUID CEMENT BRUSH.



Made of French bristles, flat and double thick.

| 1½ inch . . . . | 0 40 | 3½ inch . . . . | 0 75 |

## BINGHAM & RUNGE HERCULES ELASTIC PADDING GLUE.

An elastic, tough, quick-drying preparation, which is applied hot after melting in an ordinary glue pot, and, while entailing more labor, gives better results than the liquid glue. Does not adhere to the edges of sheets as they are removed from the pad, thus preventing tearing of pages in invoice and letter copying books. The color is bright red. Put up in pails, with directions for use on each.

| | | | |
|---|---|---|---|

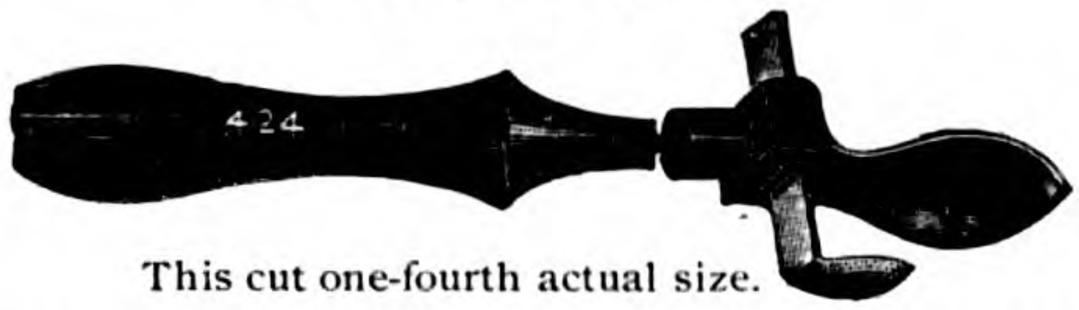
| 2 quarts, each . . . . | 1 20 |

## PAPER COUNTER.



This cut one-fourth actual size.

To make ready for use in pad work, count out number of sheets wanted by hand, on top of which place the plate, then draw the stab up firmly against the paper. The screw in handle holds the stab in place. To operate, place plate on top of lot to be counted and push stab into paper, bearing down at same time.

Price . . . . . $0 75

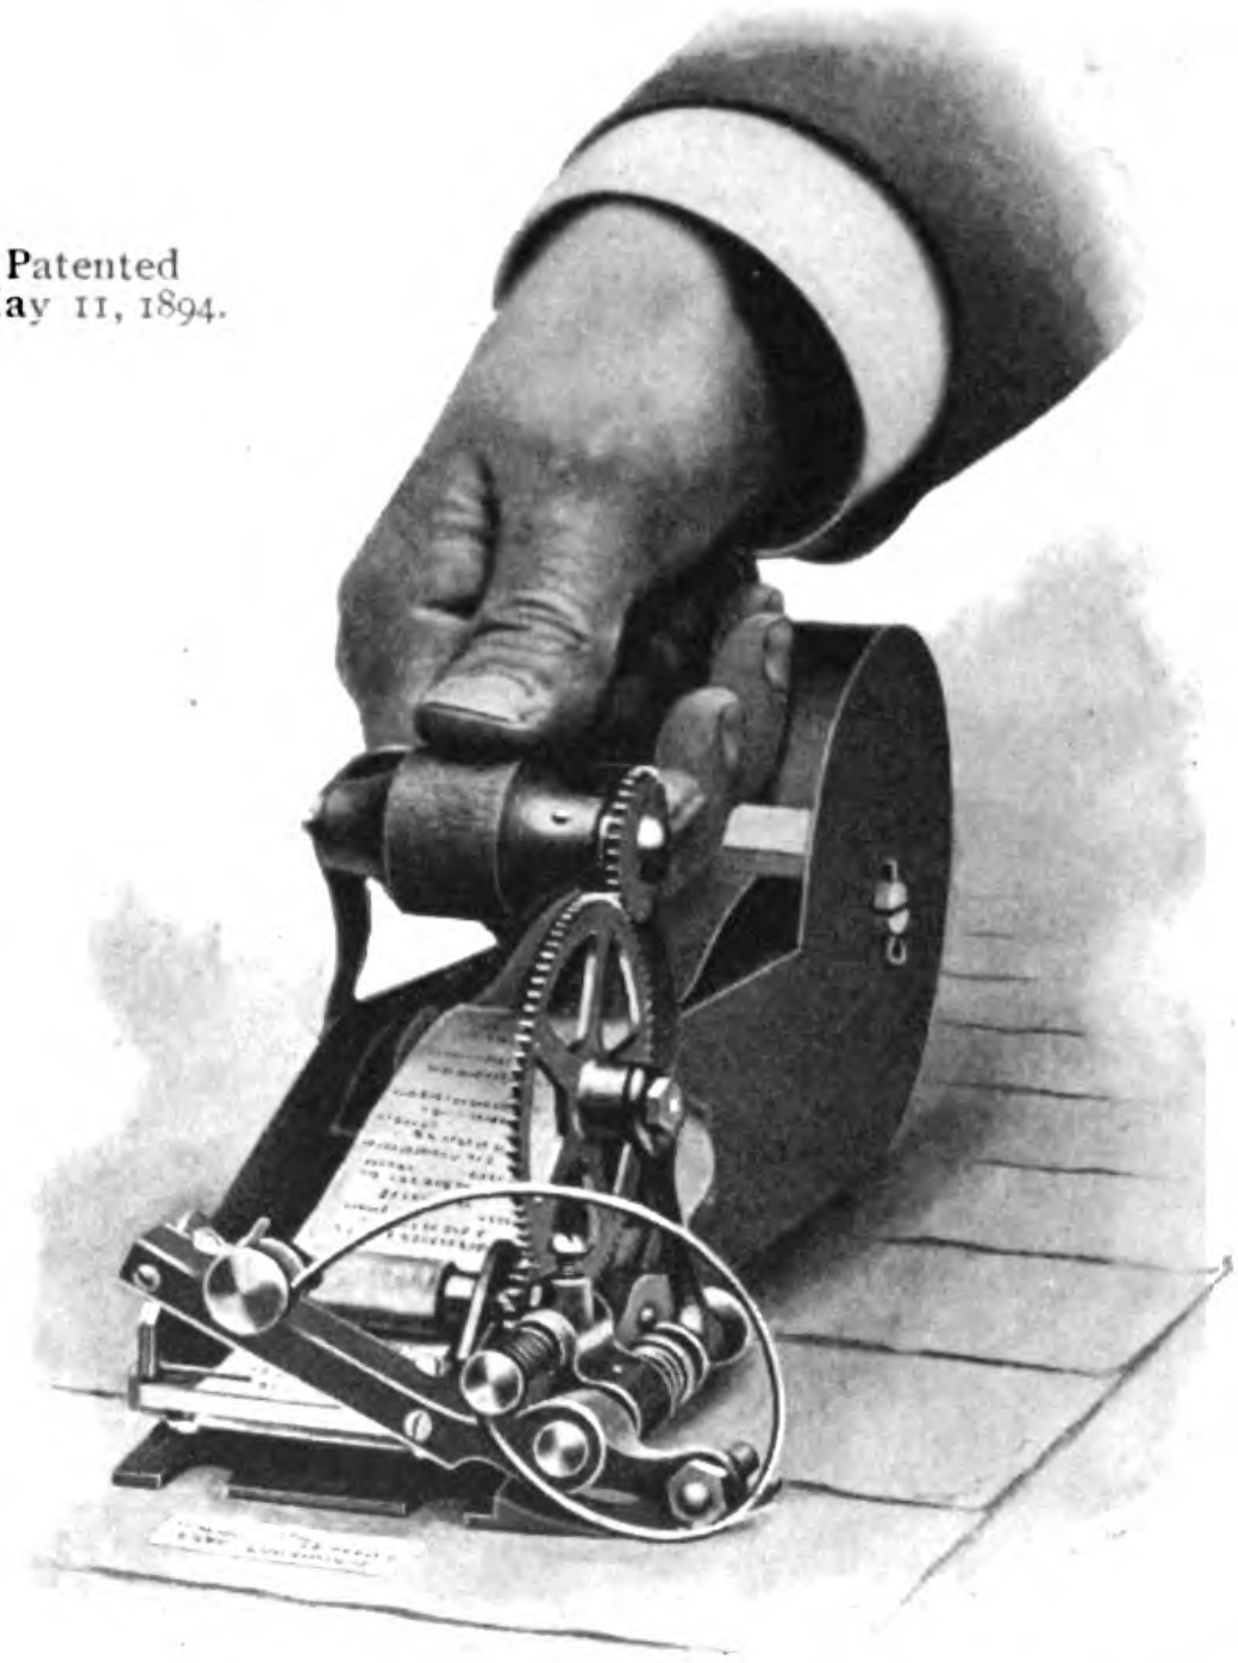
## TABLET KNIFE.

Made specially for separating pads; extra thin and strong.

Price . . . . . $0 50

# FOR MAILING DEPARTMENT.

## THE HORTON MAILER.



Patented
May 11, 1894.

This is the best label-pasting mailer. It is quicker and more exact, because all its movements are positive. It is so simple that it can be worked rapidly and efficiently by the inexpert, while experts have addressed with it at the rate of 170 per minute. It is operated, as illustrated, by one hand, leaving the other entirely free to manipulate the papers or wrappers.

It guides and thoroughly pastes the slip, scrapes off all surplus paste, and sticks the label cleanly and firmly. The knives are thin and adjustable, with two cutting surfaces, and can be easily sharpened. The arrangements for adjusting knives with each other and regulating tension of knives are very exact.

It is very strongly made, and is the most durable of mailers.

### A TESTIMONIAL OF 1897.

*The Ladies' Home Journal*, Philadelphia; circulation, 690,000: "We have placed it in the hands of four of our experienced mailers, each having been given sufficient time to get acquainted with it, so that we might have more than one opinion. They were all satisfied that the machine is an improvement on any they have used. The Horton Mailer cuts and pastes the slip on the *Journal* or wrapper more thoroughly than the machines we have been using. . . . We do not believe it has an equal on the market to-day."

### A TESTIMONIAL OF 1898.

*April 21, 1898*:—"We printed 850,000 copies of the April number, and it is nearly exhausted already. We are now using your Mailer exclusively, and, although our operators were very much averse to the change at first, we don't think they could be induced to go back to the machines they were using previously. We have yet to hear of a single complaint of any kind, either in its construction or use. **We save the cost of a machine in knife sharpening alone in four months.**"

MAILING BUREAU, THE CURTIS PUBLISHING CO. (*Ladies' Home Journal.*)

### TROUBLE VANQUISHED.

AMERICAN TYPE FOUNDERS' CO.:—We wish to say that for convenience, speed and accuracy the "Horton Mailer" has no equal. We are delighted with it. While we had innumerable complaints before that papers did not reach their destination (owing, as we claim, to the defects in the old mailer) we are now untroubled in that regard, and we enjoy a feast like the peace of the mirrored lake bounded on all sides by the high mountains of the Adirondacks. The "Horton Mailer" is all right.

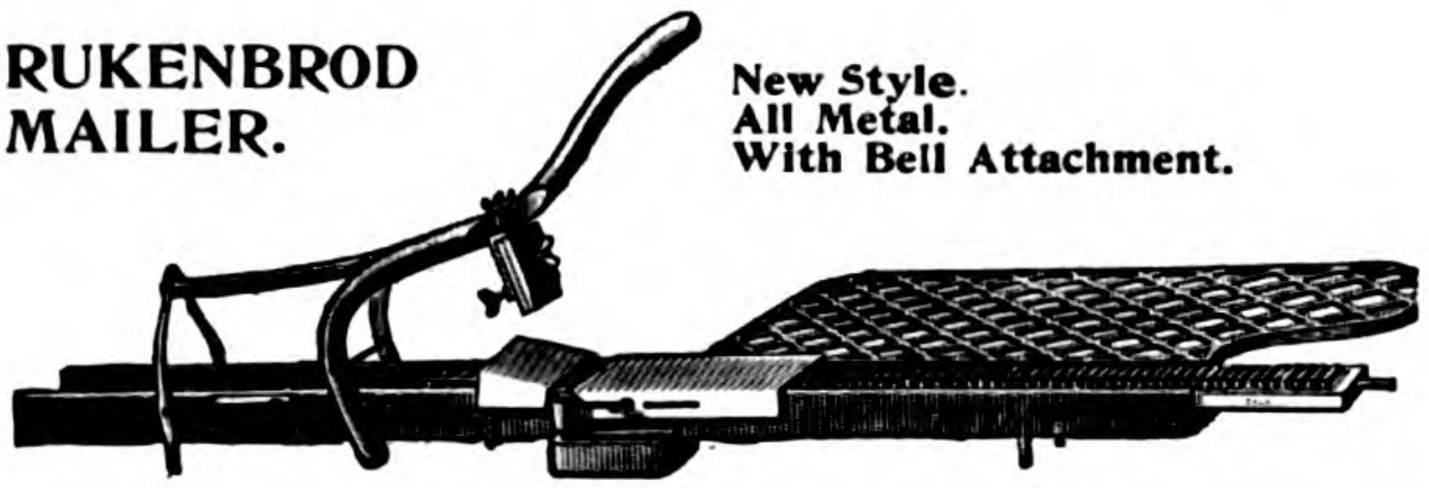
## RUKENBROD MAILER.

**New Style.**
**All Metal.**
**With Bell Attachment.**



This mailer prints direct on the paper or envelope, clearly, and as rapidly as paper can be put under the platen. It is the best mailer of its class. Each address is brought under the platen automatically, and bell quads may be used which will ring an alarm bell when the papers for any town are all addressed, whereupon the next town wrapper address is printed. Each mailer is provided with two platens, one for two-line address and one for three- and four-line addresses. No other mailer of its class will print a four-line address.

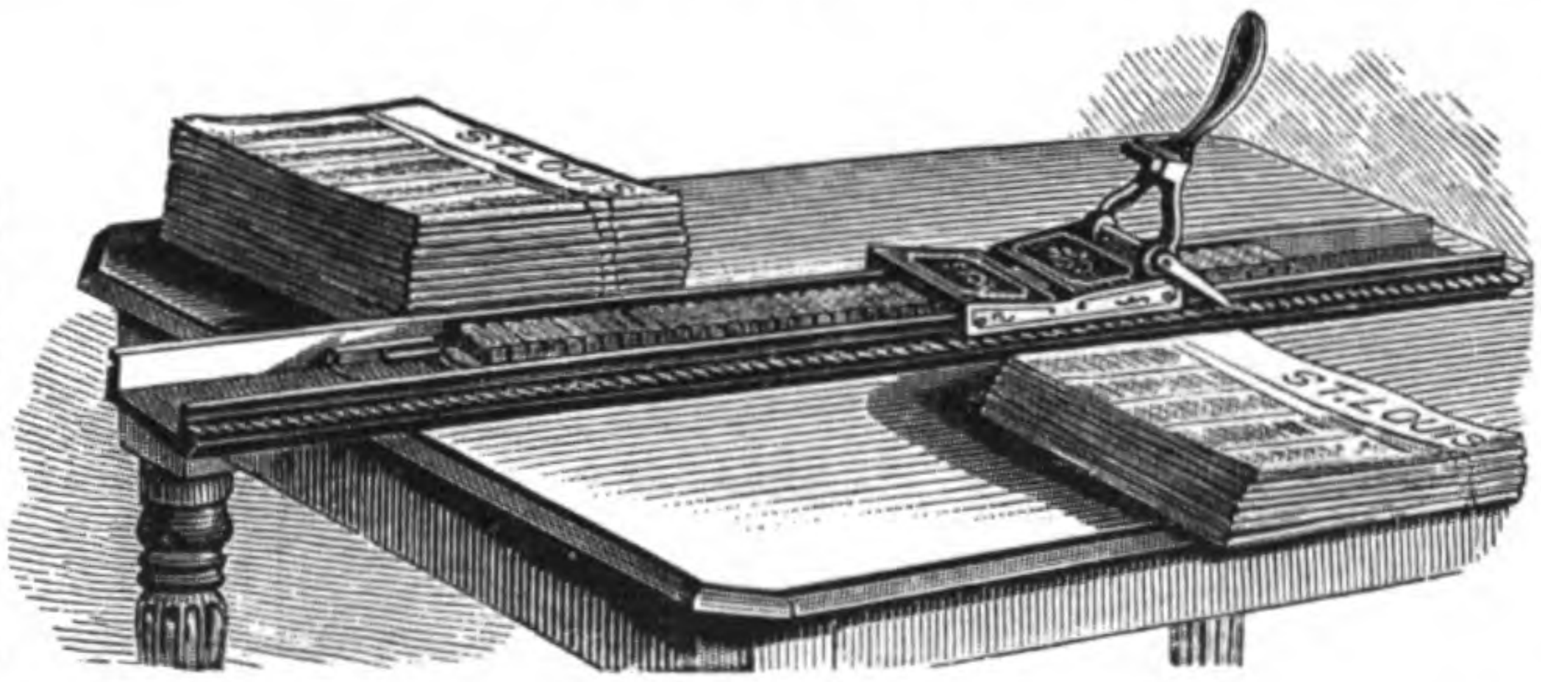
## MUSTANG MAILER.



This mailer prints directly on the paper or envelope. The platen and its frame moves automatically, printing one address at a time. It will print three-line (8 Point) addresses.

The Mustang Mailer occupies a space of 37 inches in length and 4½ inches in width, and is made wholly of iron without springs or complications of any kind. Speed is regulated solely by the speed of operator in passing the papers to and from the mailer. The mail list is made up in galleys ten ems Pica wide on the inside.

Each galley holds seventy-five addresses. The weight of the machine is fifteen pounds, and of the galleys one pound.

Price . . . . . $10 00

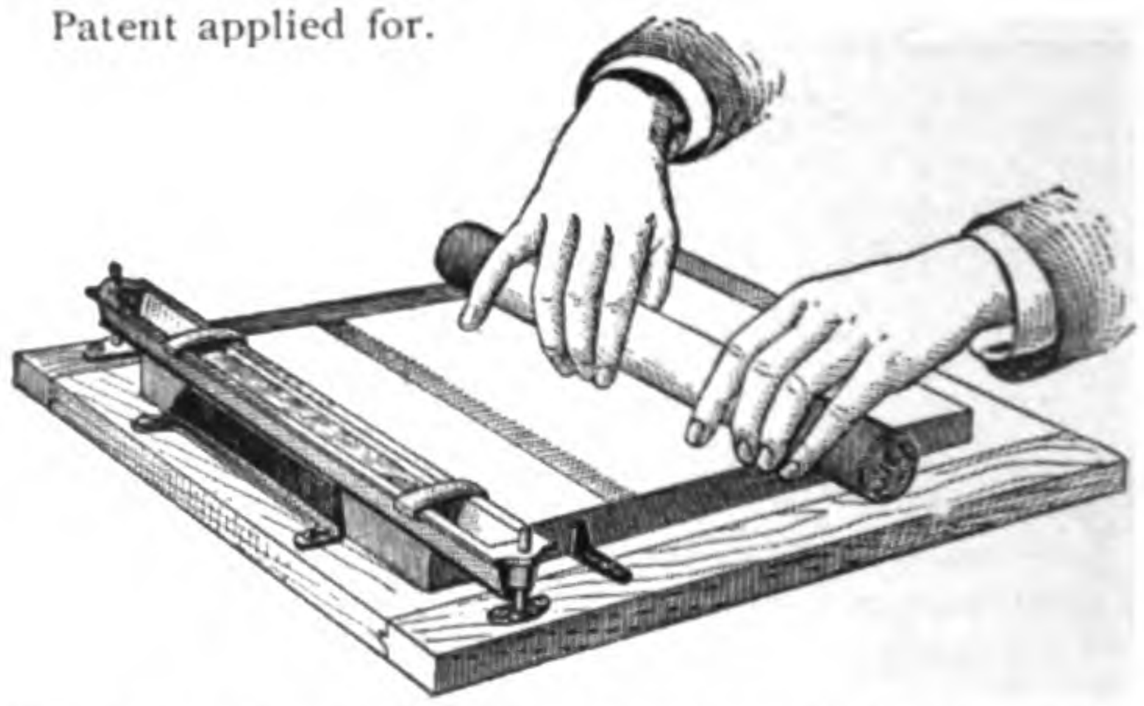
## ECONOMY WRAPPER PASTER.

Patent applied for.



The paste fountain has a perforated bottom through which the paste reaches the top sheet of a pile, which may contain four hundred sheets. As the top sheet is drawn off, the next is pasted automatically and instantly, and so on. Wrappers are pasted as fast they can be drawn from the pile.

It saves all the time of "laying out" and applying paste with a brush, fifty per cent. in paste, and a great deal of space, as three or four hundred wrappers occupy no more table room than one, and you can wrap on top of the pile, as indicated in the cut.

## A SAMPLE EXPERIENCE—A REMARKABLE SAVING.

CHICAGO GREAT WESTERN RAILWAY—PRINTING OFFICE.
CHARLES A. STICKNEY, SUPERINTENDENT PRINTING.

*American Type Founders' Company:* ST. PAUL, MINN., April 20, 1897.

DEAR SIRS—In answer to your letter of April 13 about the "Economy Wrapper Paster": We have just finished wrapping an edition of fifteen thousand tariffs, 12×18 inches—28 pages. These tariffs were being wrapped at the rate of 250 per hour with a brush, while with the aid of your paster this was increased to 400 per hour. In every way I think it far ahead of a brush.

Yours truly, CHARLES A. STICKNEY.

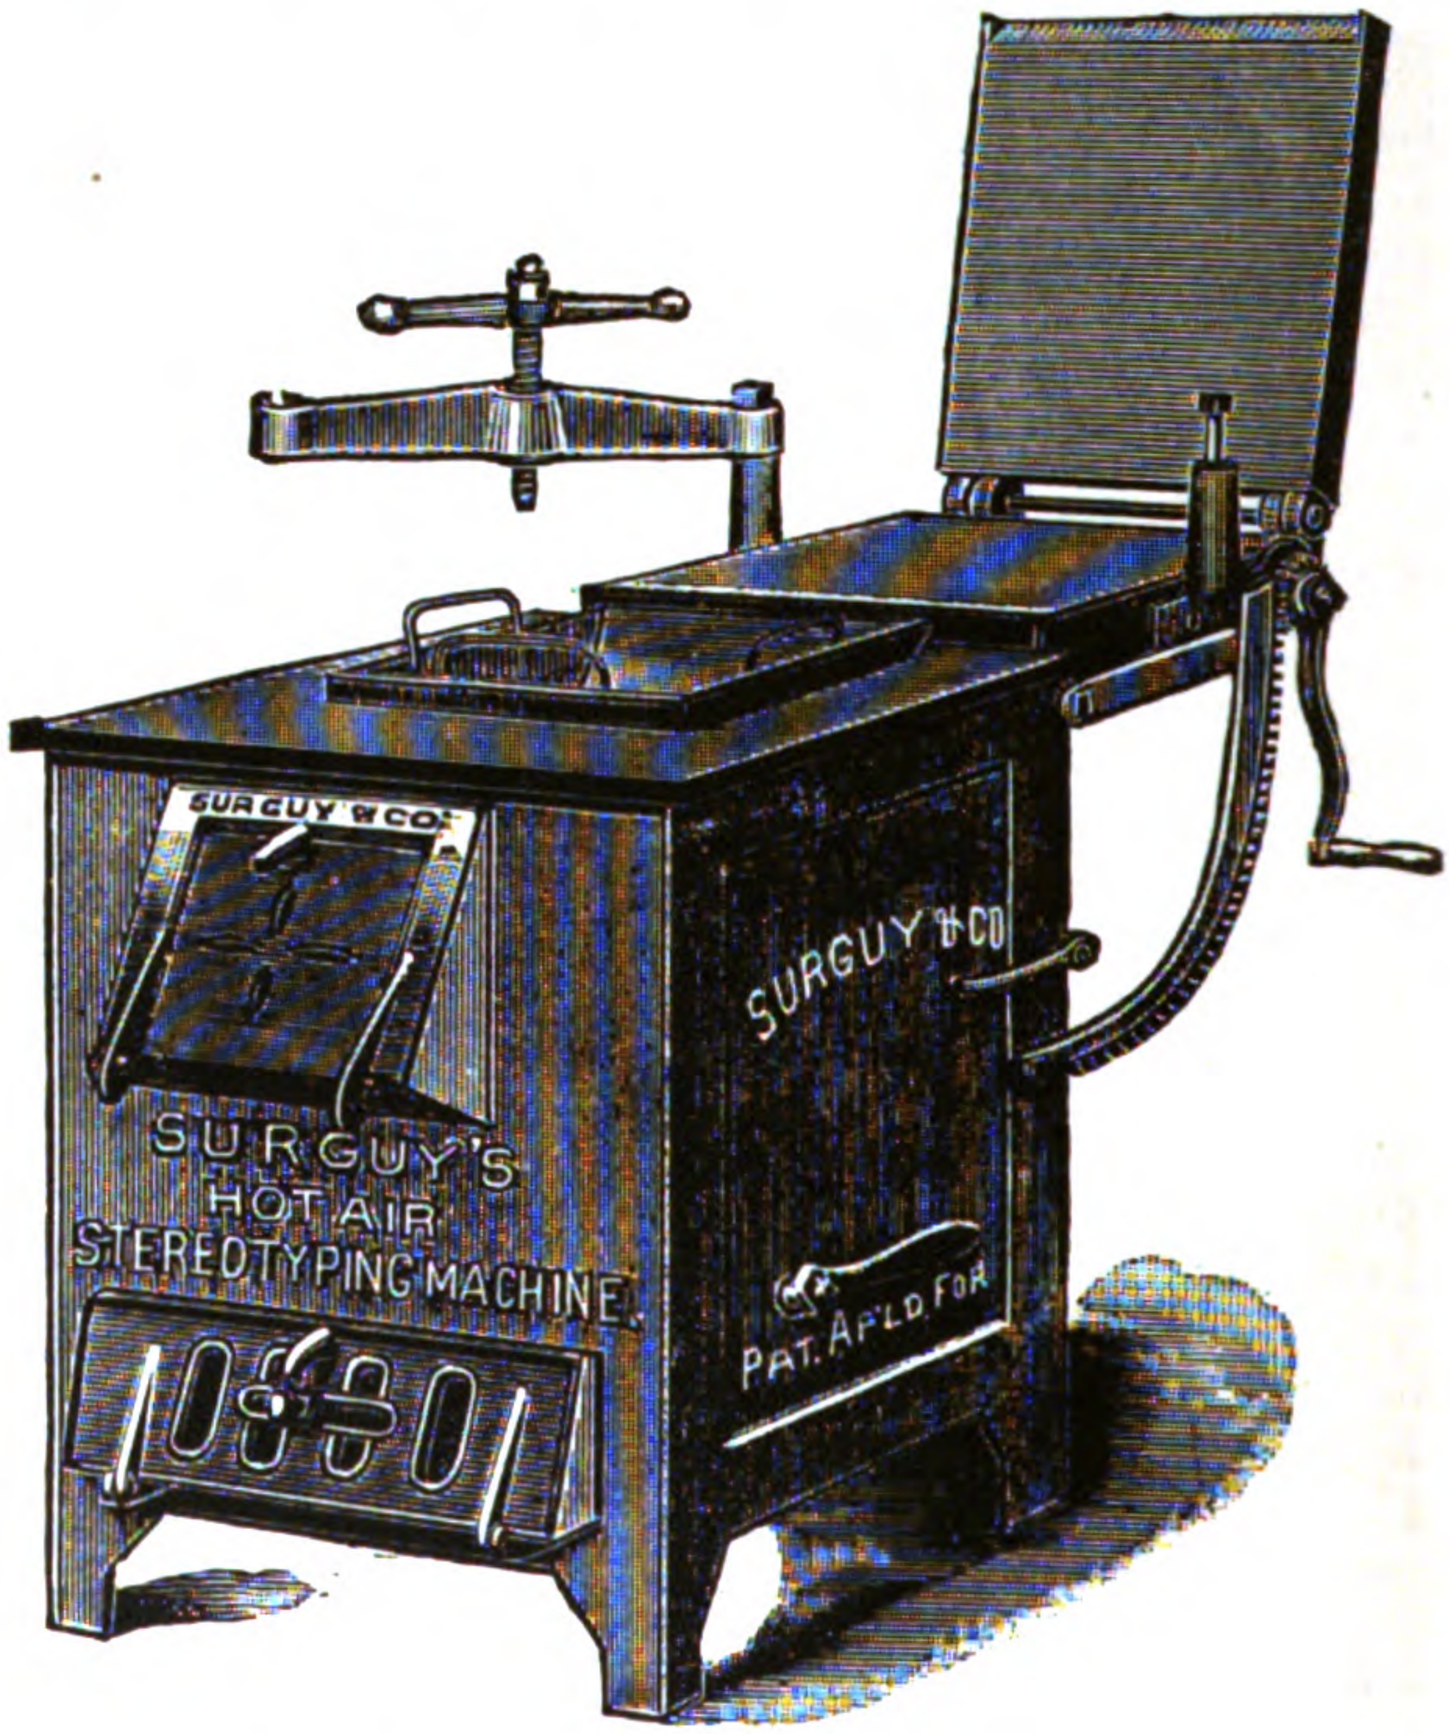
# THE SURGUY NEW HOT AIR STEREOTYPING APPARATUS.



The furnace and casting box are combined. One fire of coal, wood or gas will melt metal and dry matrix simultaneously or separately if preferred, as metal pot is detachable. Each apparatus will make thin or type-high plates.

The 8½ × 14-inch apparatus will stereotype a form of 7½ × 10 inches. It is too small to use with wood or coal, and is fitted with a gasoline attachment, or gas may be used. The 12 × 20-inch apparatus will stereotype a form of 10 × 18 inches. The 18 × 26-inch apparatus will stereotype a form of 16 × 24 inches, taking in a standard six-column page of a newspaper.

# HOKE CROWN ENGRAVING PLATES.

(PATENTED.)

A Crown Engraving Plate consists of a thin, dark, steel plate, covered with a soft, white composition. By means of special tools, used after the manner of pens, the drawing is made by cutting through the composition to the dark surface of the steel plate, which shows the drawing as it will appear when printed. No apprenticeship is needed. Anyone able to draw can do the work. Speed is gained by practice. Three or four tools and a scraping brass is all that is required for ordinary work. After the drawing is finished, a stereotype cast is made from it and the cut is ready for the press. The quickness and cheapness of the process are apparent. Any stereotype foundry can cast the plates, but for those who desire to do their own casting we have special simple and cheap stereotyping outfits suited to every line of work.

This process is suitable for rapid newspaper illustration. A cut may be got ready inside of thirty minutes.

## HOW TO ESTIMATE.

To ascertain the quantity of body type required for a publication, find the number of square inches and divide the same by four, and the quotient will be the approximate weight of type required; but, as it is impossible to set the cases entirely clear, it is necessary to add 25 per cent. to the weight of large fonts, and 33⅓ per cent. to small fonts, to allow for dead letter.

## APPROXIMATE NUMBER OF WORDS IN A SQUARE INCH.

In calculating the number of pages a manuscript will occupy, these figures may be used:

| | WORDS TO SQ. IN. | | WORDS TO SQ. IN |
|---|---|---|---|
| 22 Point | 4 | 9 Point, leaded | 21 |
| 18 Point, solid | 7 | 8 Point, solid | 32 |

## TO PRINT CONSECUTIVE NUMBERS.

Orders to print consecutive numbers are received more or less frequently by every printing office, large or small. In the average office, to print the numbers 1 to 200 consecutively would be quite a task, and when undertaken in the ordinary way, with the facilities usually at hand, the cost is so high that the customer usually concludes to get along with something else than printed numbers, and what might be a profitable job is lost to the office.

Suppose an order for two hundred reserved seat numbers from 1 to 200, six copies of each. It is not necessary to set up more than the units 1 to 0. These figures are to be set up, properly spaced, one above the other, as shown in column A of the table annexed.

| A | B | C | D | E | F | G | H | I | K | L |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 11 | 21 | 31 | 41 | 51 | 61 | 71 | 81 | 91 | 01 |
| 2 | 22 | 32 | 42 | 52 | 62 | 72 | 82 | 92 | 02 | 12 |
| 3 | 33 | 43 | 53 | 63 | 73 | 83 | 93 | 03 | 13 | 23 |
| 4 | 44 | 54 | 64 | 74 | 84 | 94 | 04 | 14 | 24 | 34 |
| 5 | 55 | 65 | 75 | 85 | 95 | 05 | 15 | 25 | 35 | 45 |
| 6 | 66 | 76 | 86 | 96 | 06 | 16 | 26 | 36 | 46 | 56 |
| 7 | 77 | 87 | 97 | 07 | 17 | 27 | 37 | 47 | 57 | 67 |
| 8 | 88 | 98 | 08 | 18 | 28 | 38 | 48 | 58 | 68 | 78 |
| 9 | 99 | 09 | 19 | 29 | 39 | 49 | 59 | 69 | 79 | 89 |
| 0 | 00 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 |

One hundred and twenty impressions are taken on strips of cardboard cut to the required width. This done, gives the required number of units. Change the gauge pins in a manner to print the same form beside the printed figures to form the tens, as shown in column B of the table. Take twelve impressions of this form on twelve of the already printed strips. The next step is to change the form by taking the top figure (1) and place it at the bottom of the column, so the next impression on a strip of the first form will read as shown in column C of the table. We print again twelve strips of the first form. This change of the top figures, 2, 3, 4, 5, 6, 7, 8, 9 and 0, respectively, is repeated eight more times, shown in the table as columns D, E, F, G, H, I, K and L. From each change twelve impressions on the printed slips containing the first form must be made. This will finish the tens, and by changing the form to ten figure 1s and again moving the pins to the left for the space-width of the type, and printing six strips of each the former changes from B to L, gives the hundreds, or a continuous run of numbers from 1 to 199 in an edition of six copies. To obtain number 200, print upon the six strips left a figure 2 to head the 00 of column B. In assorting the numbers it will be found that each six copies of the heavy type cannot be used, but this small loss in stock is compensated many times by the advantage derived from the method.

## DIRECTIONS FOR SECURING COPYRIGHTS

**Under the Revised Acts of Congress, including the Provisions for Foreign Copyright, by Act of March 3, 1891.**

**Printed title required.**

1. A *printed* copy of the title of the book, map or chart, dramatic or musical composition, engraving, cut, print, photograph or chromo, or a *description* of the painting, drawing, statue, statuary or model or design for a work of the fine arts, for which copyright is desired, must be delivered to the Librarian of Congress or deposited in the mail, within the United States, *prepaid*, addressed "LIBRARIAN OF CONGRESS, WASHINGTON, D. C." This must be done on or before day of publication in this or any foreign country.

**What style of print.**

The *printed title* required may be a copy of the title page of such publications as have title pages. *In other cases the title must be printed expressly for copyright entry*, with name of claimant of copyright. The style of type is immaterial, and the print of a typewriter will be accepted. But a separate title is required for each entry, and *each* title must be printed on paper as large as commercial note. The title of a *periodical* must include the date and number; and each number of the periodical requires a separate entry of copyright.

**Copyright fees.**

2. The legal fee for *recording* each copyright claim is 50 cents, and for a *copy* of this record (or certificate of copyright under seal of the office) an additional fee of 50 cents is required, making $1 if certificate is wanted, which will be mailed as soon as reached in the records.

For publications which are the production of persons not citizens or residents of the United States, the fee for recording title is $1, and 50 cents additional for a copy of the record. Certificates covering more than one entry in one certificate are not issued.

**Two copies required.**

3. Not later than the day of publication in this country or abroad, two complete copies of the best edition of each book or other article must be delivered, or deposited in the mail within the United States, addressed "LIBRARIAN OF CONGRESS, WASHINGTON, D. C.," to perfect the copyright.

**Free by mail.**

The freight or postage must be prepaid, or the publications inclosed in parcels covered by printed Penalty Labels, furnished by the Librarian, in which case they will come FREE by mail (*not express*), without limit of weight, according to rulings of the Post Office Department.

**To be American made.**

Books must be printed from type set or plates made in the United States; photographs from negatives made in the United States; chromos and lithographs from drawings on stone or transfers therefrom made in the United States.

**Penalty.**

Without the deposit of copies above required the copyright is void, and a penalty of $25 is incurred. No copy is required to be deposited elsewhere.

**New editions.**

The law requires one copy of each new edition, wherein any substantial changes are made, to be deposited with the Librarian of Congress.

**Notice of copyright to be given by imprint.**

4. No copyright is valid unless notice is given by inserting in every copy published, on the title page or the page following, if it be a book; or if a map, chart, musical composition, print, cut, engraving, photograph, painting, drawing, chromo, statue, statuary or model or design intended to be perfected as a work of the fine arts, by inscribing upon some portion thereof, or on the substance on which the same is mounted,

**Claimant's name to be printed.**

the following words, viz.: "*Entered according to Act of Congress, in the year*——, *by*——, *in the office of the Librarian of Congress, at Washington*," or, at the option of the person entering the copyright, the words: "*Copyright, 18*—, *by*————————."

**Penalty for false claim.**

The law imposes a penalty of $100 upon any person who has not obtained copyright who shall insert the notice "*Entered according to Act of Congress*," or "*Copyright*," etc., or words of the same import, in or upon any book or other article.

**Translations and dramas.**

5. The copyright law secures to authors and their assigns the exclusive right to translate or to dramatize any of their works; no notice or record is required to enforce this right.

**Duration of copyright.**

6. The original term of copyright runs for twenty-eight years. *Within six months before* the end of that time, the author or designer, or his widow or children, may secure a renewal for the further term of fourteen years, making forty-two years in all. Applications for renewal

**Renewals.**

must be accompanied by a printed title and fee, and by explicit statement of ownership in the case of the author, or of relationship in the case of his heirs, and must state definitely the date and place of entry of the original copyright. Within two months from date of renewal the record thereof must be advertised in an American newspaper for four weeks.

**Time of publication.**

7. The time of publication is not limited by any law or regulation, but the courts have held that it should take place within a reasonable time. A copyright may be secured for a projected as well as for a completed work; but the law provides for no *caveat* or notice of interference—only for actual entry of title.

**Assignments.**

8. Copyrights are assignable by any instrument of writing. Such assignment, to be valid, is to be recorded in the office of the Librarian of Congress within sixty days from execution. The fee for this record and certificate is $1, and for a certified copy of any record of assignment $1.

**Copies or duplicate certificates.**

9. A copy of the record (or duplicate certificate) of any copyright entry will be furnished, under seal of the office, at the rate of 50 cents each.

**Serials or separate publications.**

10. In the case of books published in more than one volume, or of periodicals published in numbers, or of engravings, photographs or other articles published with variations, a copyright must be entered for each volume or part of a book, or number of a periodical, or variety, as to style, title or inscription, of any other article. To *complete* the copyright on a book published serially in a periodical, two copies of each serial part, as well as of the complete work (if published separately), should be deposited.

**Copyright for works of art.**

11. To secure copyright for a painting, statue or model or design intended to be perfected as a work of the fine arts, a definite title and description must accompany the application for copyright, and a mounted photograph of the same, as large as "cabinet size," mailed to the Librarian of Congress not later than the day of publication of the work or design.

**Fine arts.**

The fine arts, for copyright purposes, include only painting and sculpture, and articles of merely ornamental and decorative art should be sent to the Patent Office, as subjects for design patents.

**No labels or names copyrighted.**

12. Copyrights cannot be granted upon trade-marks, nor upon names of companies, libraries or articles, nor upon an idea or device, nor upon prints or labels intended to be used for any article of manufacture. If protection for such names or labels is desired, application must be made to the Patent Office, where they are registered, if admitted, at a fee of $6 for labels and $25 for trade-marks.

**Foreign or international copyright.**

13. The provisions as to copyright entry in the United States by foreign authors, etc., by Act of Congress approved March 3, 1891 (which took effect July 1, 1891), are the same as the foregoing, except as to productions of persons not citizens or residents, which must cover return postages, and are $1 for entry, or $1.50 for entry and certificate of entry (equivalent to 4*s*. 5*d*. or 6*s*. 7*d*.). All publications must be delivered to the Librarian at Washington free of charge. The free penalty-labels cannot be used outside of the United States.

**Fees.**

The right of citizens or subjects of a foreign nation to copyright in the United States extends by Presidential proclamations to Great Britain, France, Belgium, Switzerland, Germany, Italy, Denmark and Portugal.

**Full name of proprietor required.**

14. Every applicant for a copyright should state distinctly the full name and residence of the claimant, and whether the right is claimed as author, designer or proprietor. No affidavit or witness to the application is required.

# METRIC SYSTEM OF WEIGHTS AND MEASURES.

In use in all European countries except Great Britain and Russia. In use in Mexico and South America.

The Meter, unit of length, is nearly the ten-millionth part of a quadrant of a meridian, of the distance between equator and pole. The International Standard Meter is, practically, nothing else but a length defined by the distance between two lines on a platinum-iridium bar at 0° Centigrade, deposited at the International Bureau of Weights and Measures, Paris, France.

The Liter, unit of capacity, is derived from the weight of one kilogram pure water at greatest density, a cube whose edge is one-tenth of a meter, and, therefore, the one-thousandth part of a metric ton.

The Gram, unit of weight, is a cube of pure water at greatest density, whose edge is one-hundreth of a meter, and, therefore, the one-thousandth part of a kilogram. and the one-millionth part of a metric ton.

One silver dollar weighs 25 grams, 1 dime = 2½ grams, 1 five-cent nickel = 5 grams.

## THE METRIC SYSTEM SIMPLIFIED.

The following tables of the metric system of weights and measures have been simplified as much as possible by Mr. John Wilkes, of Nashville, Tenn., by omitting such denominations as are not in practical, everyday use in the countries where the system is used exclusively.

### TABLES OF THE SYSTEM.

LENGTH.—The denominations in practical use are millimeters (mm.), centimeters (cm.), meters (m.), and kilometers (km.).

10 mm. = 1 cm.; 100 cm. = 1 m.; 1000 m. = 1 km.

A decimeter is 10 cm.

WEIGHT.—The denominations in use are grams (g.), kilos* (kg.), and tons (metric tons).

1000 g. = 1 kg.; 1000 kg. = 1 metric ton.

CAPACITY.—The denominations in use are cubic centimeters (c.c.), and liters (l).

1000 c.c. = 1 l.

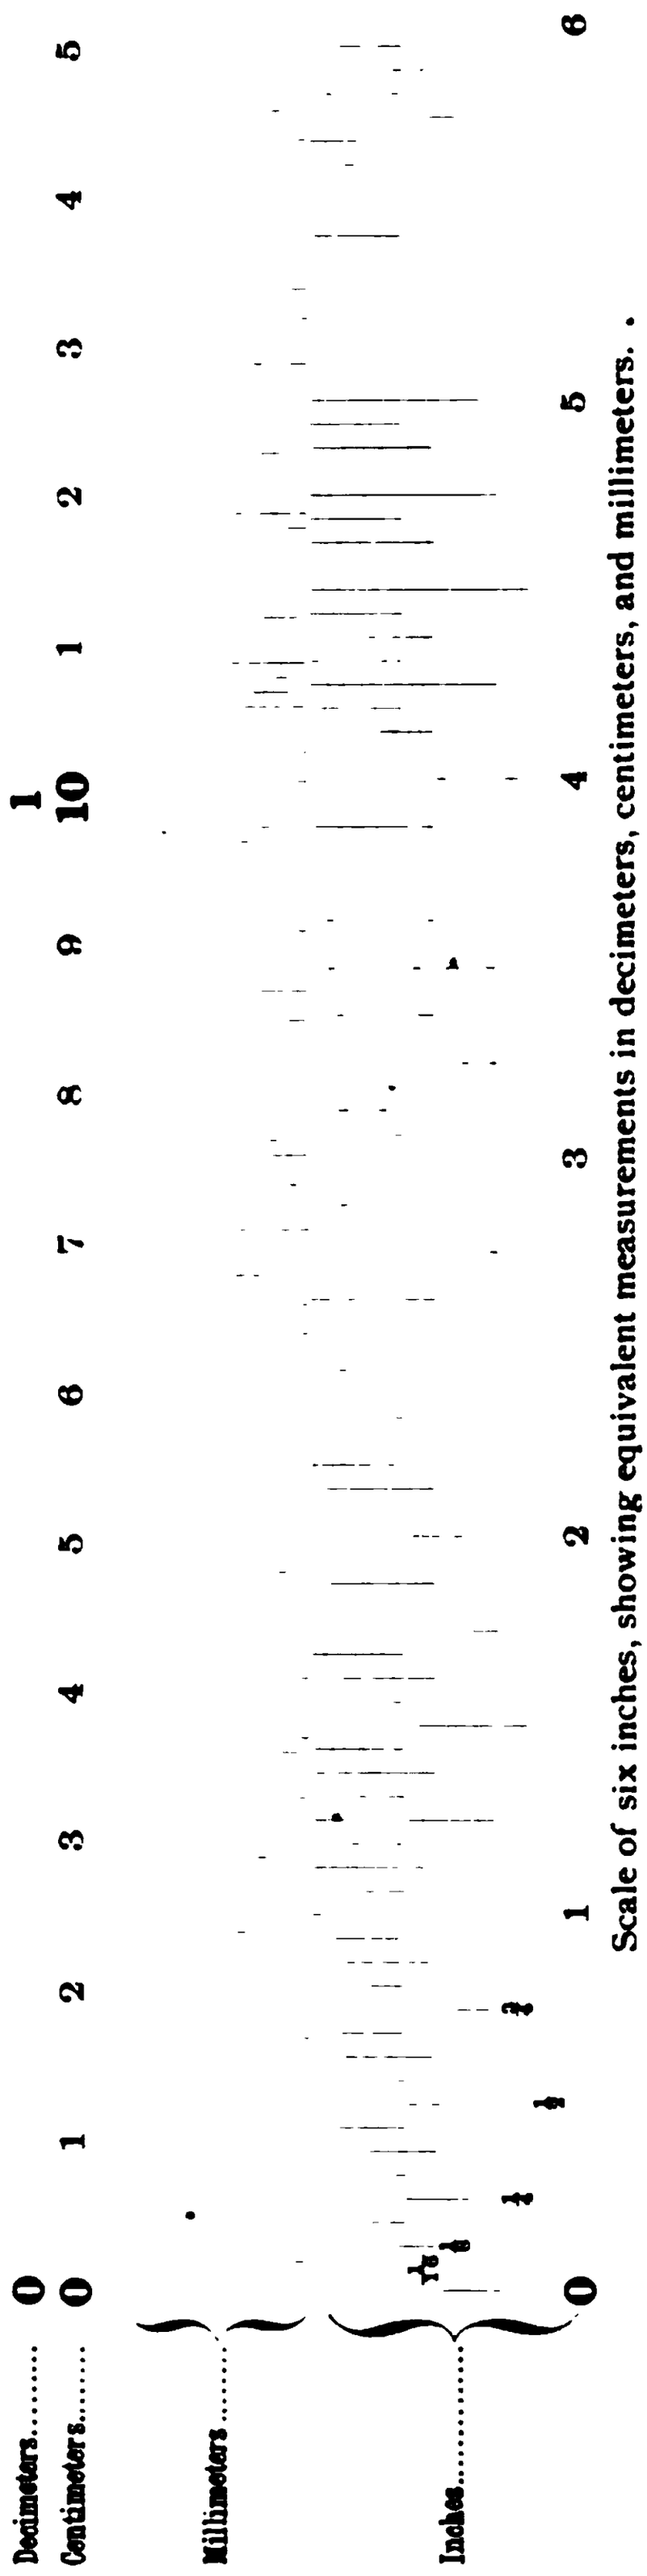
A hectoliter is 100 l. (seldom used).

Relation of capacity and weight to length: A cubic decimeter is a liter, and a liter of water weighs a kilo.

### APPROXIMATE EQUIVALENTS.

A meter is about a yard; a kilo is about 2 lbs.; a liter is about a quart; a centimeter is about ⅓ inch; a metric ton is about the same as a ton; a kilometer is about ½ mile; a cubic centimeter is about a thimbleful; a nickle weighs about 5 grams.

* Contraction for kilogram.



# IMPOSITION OF FORMS.

**HINTS ON IMPOSITION: A Hand-book for Printers.** By T. B. Williams. Leather, 90 pp., $1.00. For sale at all Branches of the American Type Founders' Company, and recommended to all who desire the fullest information concerning the imposition of forms.

The make-up should learn to use the measuring rule or tape measure and dividers. They are more convenient to measure with than paper, and their use is regarded as evidence of knowledge of the imposition of book forms. The dividers will enable the make-up to verify his measurements quickly. Printers' dividers cost 85 cents.

Ascertain what furniture will be required for the margins of a book form before placing it upon the stone. Time will be saved, and the work will have the appearance of order and neatness.

After a book form is imposed, tighten the quoins, and ascertain by means of a straight-edge or square if the pages are of equal length and the head lines or bottom folios are exactly in line. The folios are usually the guides for hand-folding and should receive great attention, otherwise the binder will not secure good register. For the same reason, folios should all be set exactly in the middle of the width of the page.

After a book form has been locked up, it should be tested for squareness with a square. Forms are liable to get twisted or bowed in locking up, especially if the chase is weak. This defect can usually be remedied by loosening the quoins on one side and tightening them on the opposite side.

## MARGINS.

The proper allowances for head and back margins are matters of judgment and preference to a great degree.

The head and foot margins of a *trimmed* book are usually of equal proportions, but, as the binder will almost invariably find it necessary to cut off more paper from the foot than from the head, the make-up must make sufficient allowance for this extra trim.

When the pages have running heads one-third or less shorter than the width of the page, one-half of the space occupied by the running head should be thrown into the head margin, because the white around the running head is to be considered as part of the head margin. If a folio only is used over a page, the head margin is to be calculated from the top line of the page.

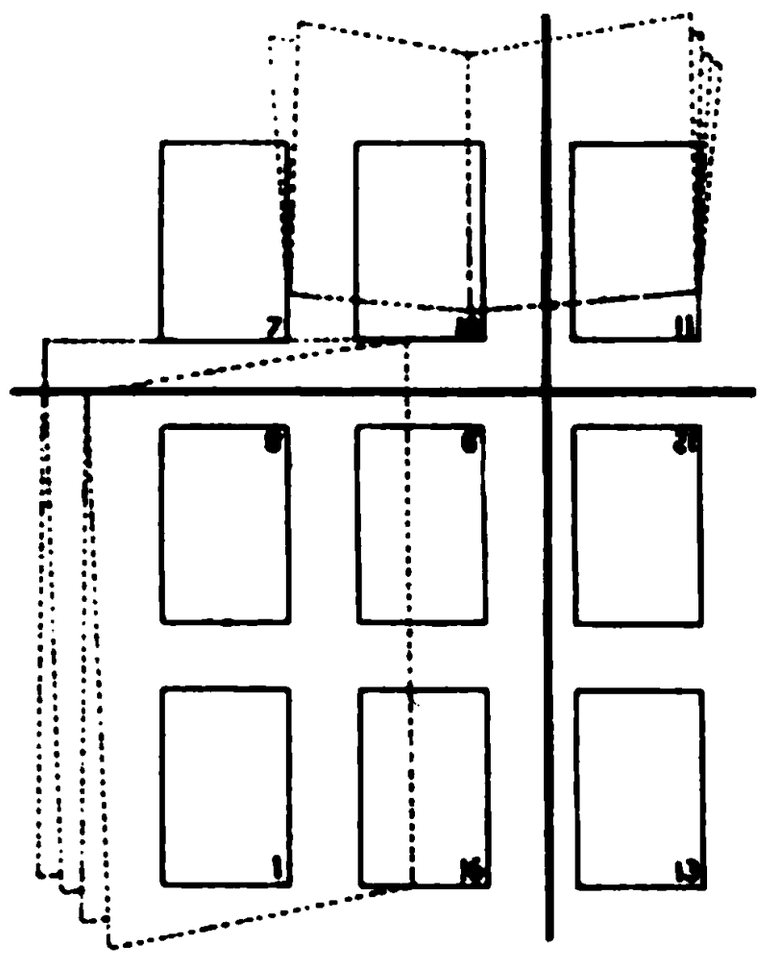
The make-up must know whether a book is to be wire-stitched through the back or sewed through the fold. If wire-stitched through the back, an extra allowance *additional* to the back margin required must be made a little in excess of the space used by the wire. This space varies according to thickness of the book, but is rarely less than three-sixteenths of an inch on *each side* of the back margin, or three-eighths of an inch in the back gutters.

In forms of 32 pages or more it is advisable, where it is possible, to impose the pages so that the sheet may be cut and folded in signatures of half the number of pages, especially when the paper is heavy; but if the form is imposed to fold as one complete signature then it is advisable to deduct enough from the back margin of the inner sections to equal the extra space taken up by the fold of the outside sections.

In imposing forms of 12 or 24 pages, great care must be taken to get the foot and head margins of the inset to be folded in exactly right, and the head and foot margins in such forms should be as evenly divided as possible. More accurate register is obtained when the inset is cut off and folded separately.

## TESTING MARGINS.

After the proper head and back margins have been decided on, and the pages arranged to conform to them, the form should be tested to ascertain if the foot and front margins are correct. The method is illustrated in the accompanying diagram of a section of a 16-page form. Fold a sheet to quarter of the size of the untrimmed paper to be used. The distance from the foot of page 16 to the foot of page 10 must agree with the length of the quarter sheet (as indicated by the dotted line), and the distance from the back edge of page 7 to the back edge of page 11 must correspond with the width of the quarter sheet. This test can be made just as well by using a measuring rule or tape, in which case, if the quarter sheet were twelve inches wide by eighteen inches long, the distance from the front edge of page 12 to the front edge of page 8 must be exactly twelve inches, and the distance from the foot of page 7 to the foot of page 1 must be exactly eighteen inches.



## GRIPPER MARGINS.

As applied to book forms, the space between the type and the outer edge of the chase at the gripper side is the gripper margin. A gauge showing the gripper margin of each press should be obtained from the pressman. When the paper is placed in its correct position on the type form, the distance between the edge of the paper and the edge of chase should be at least half an inch less than the gripper margin, to permit the pressman to move his form into a suitable place. To make a proper allowance for gripper margin, it is often necessary to place more furniture in the foot margins on the side of the long cross-bar next the gripper than on the other side. The lowest folio of a form should be placed next the gripper edge.

## CORRECT IMPOSITION OF LENGTHWISE CUTS AND TABLES.

The correct rule is that lengthwise tables and cuts shall always read from the foot of page. When a lengthwise cut or table is on one page and the explanatory or descriptive matter on the opposite page, then the cut or table should, if possible, be placed on the page with the even folio.

## TESTS OF CORRECT IMPOSITION.

As a general rule, except where for convenience in folding, certain forms are imposed from the center, the lowest (first) folio of a form is placed on the lower left-hand corner. All odd folios are always at the left-hand of the make-up, as viewed from the foot.

The odd and even folios of pages which are side by side in a correctly imposed regular form will, when added together, form a total of one more than the number of pages in a signature. The first and last pages of a signature are always placed side by side—as, for instance, in a 16-page form, where folios 1 and 16 equal seventeen.

## PRESS POINTS.

These are used in forms that are imposed for books, the sections of which are folded by machines. In 16-page forms these points are usually placed exactly 15 inches apart—7½ inches each way from the center of the first fold. The sheets are fed into the folding machine by the point holes to insure register, and the points should be placed exactly in accordance with the instructions of the bookbinder.

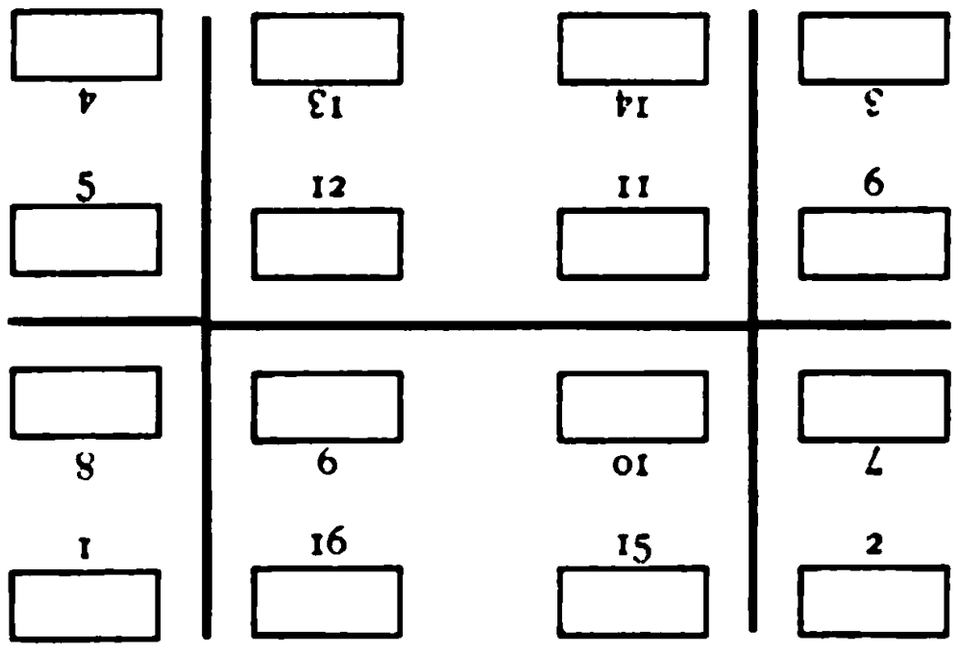
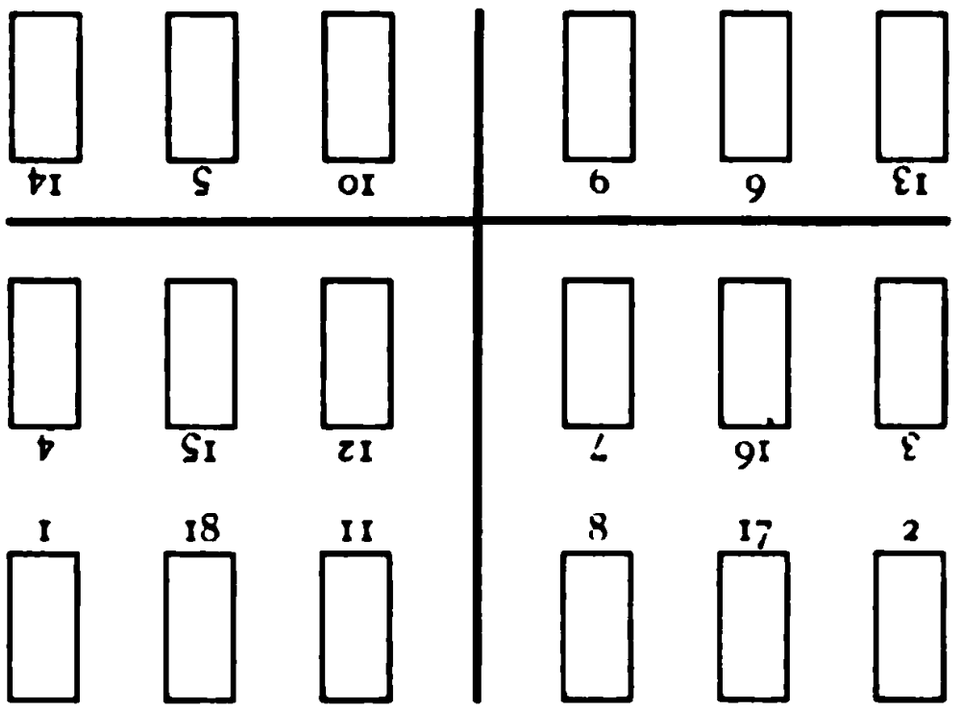
### SIXTEEN PAGES, BROAD WAY, IN TWO FORMS.



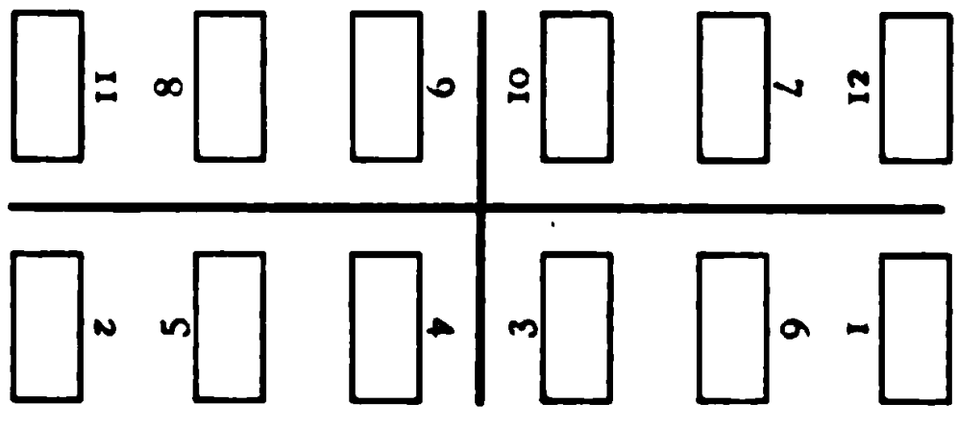
### EIGHTEEN PAGES.

When the first side is worked off, transpose pages 11 and 8 in place of 7 and 12, and 7 and 12 in place of 11 and 8.



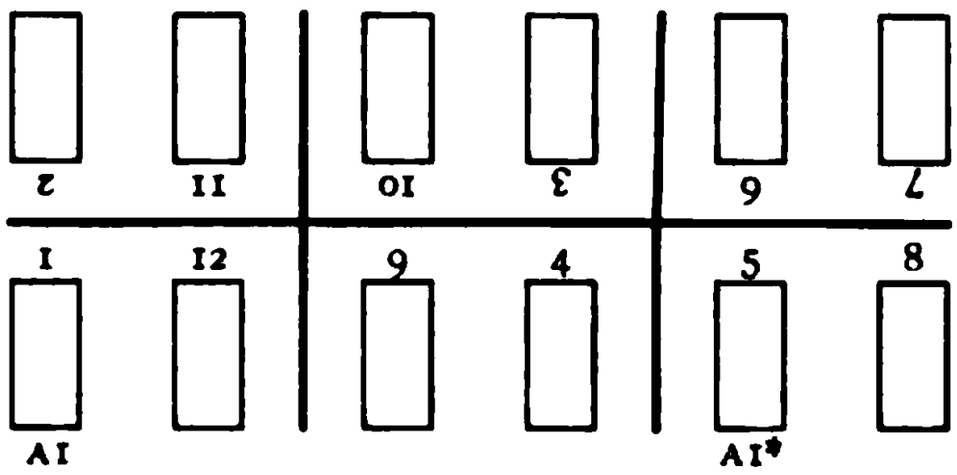
### TWELVE PAGES, BROAD WAY.

In this form pages 3, 4, 9 and 10 are folded in. May frequently be used to advantage on booklets and catalogues.

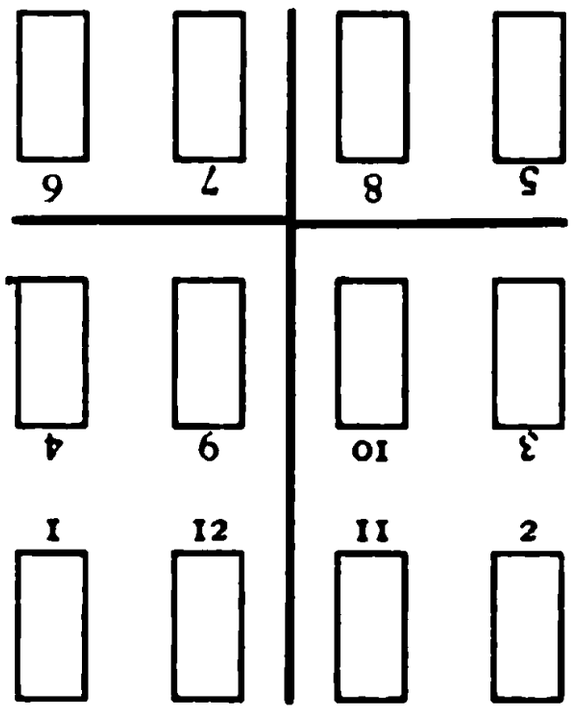


### TWELVE PAGES, DEEP WAY.

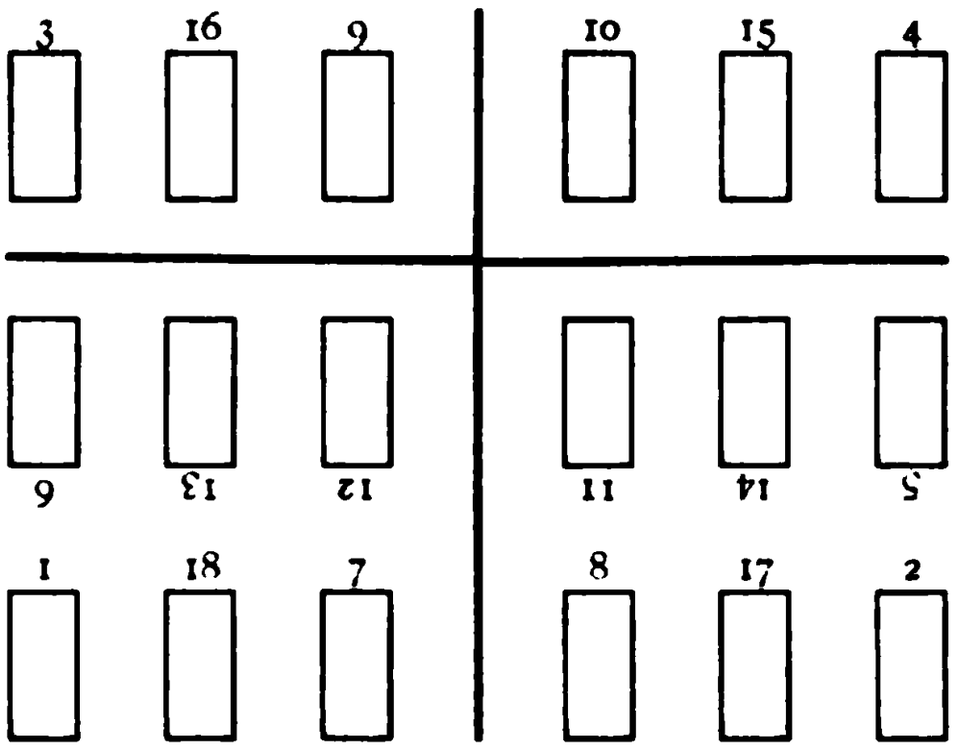
This method is convenient only for deep pages, such as an odd-sized booklet, and the same size of paper used on the two regular forms for twelve pages may be used. Paper should be trimmed.



### TWELVE PAGES, WITH OFF-CUT.



### EIGHTEEN PAGES, WITHOUT TRANSPOSITION.



## IMPOSITION OF FOLDERS.

The margins of folders are usually equal all around each page, and consequently accuracy in make-up and imposition is necessary. When the sheet is to be backed, turn it the broad way, toward the folio 2. Before printing, paper should be trimmed.

## FORMS IMPOSED FROM THE CENTER.

This method of imposition is preferable in forms containing title page, copyright notice and other introductory pages with very little matter in them, as it brings the full pages outside, where they serve as bearers and often prevent slurring.

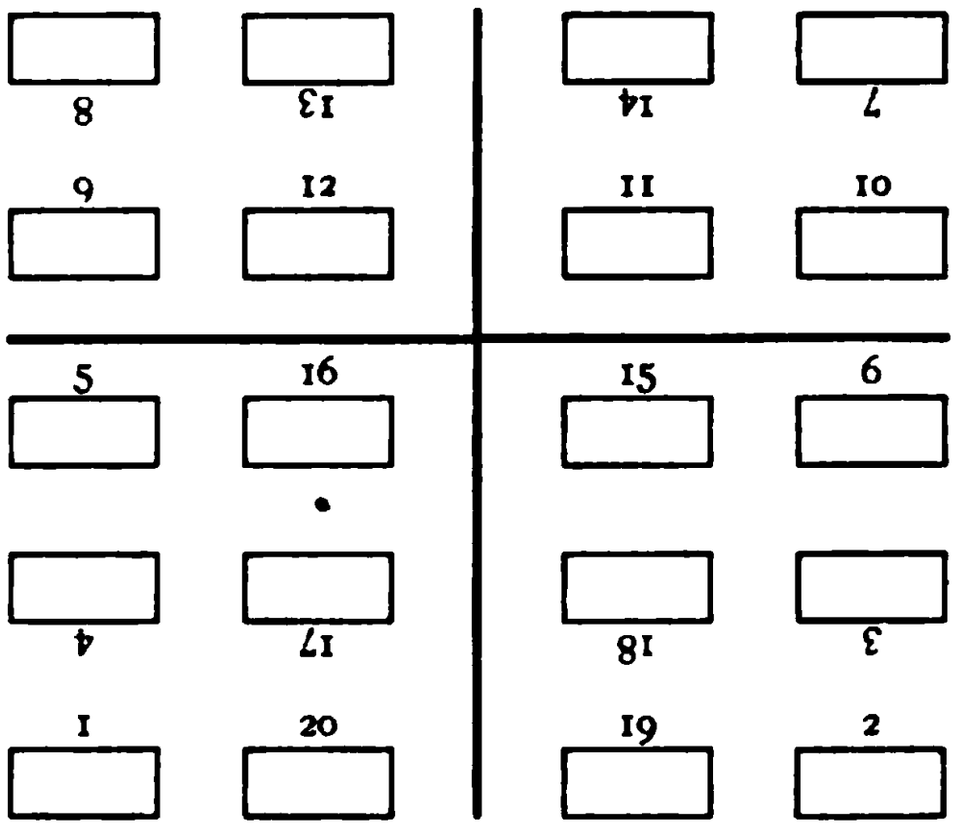
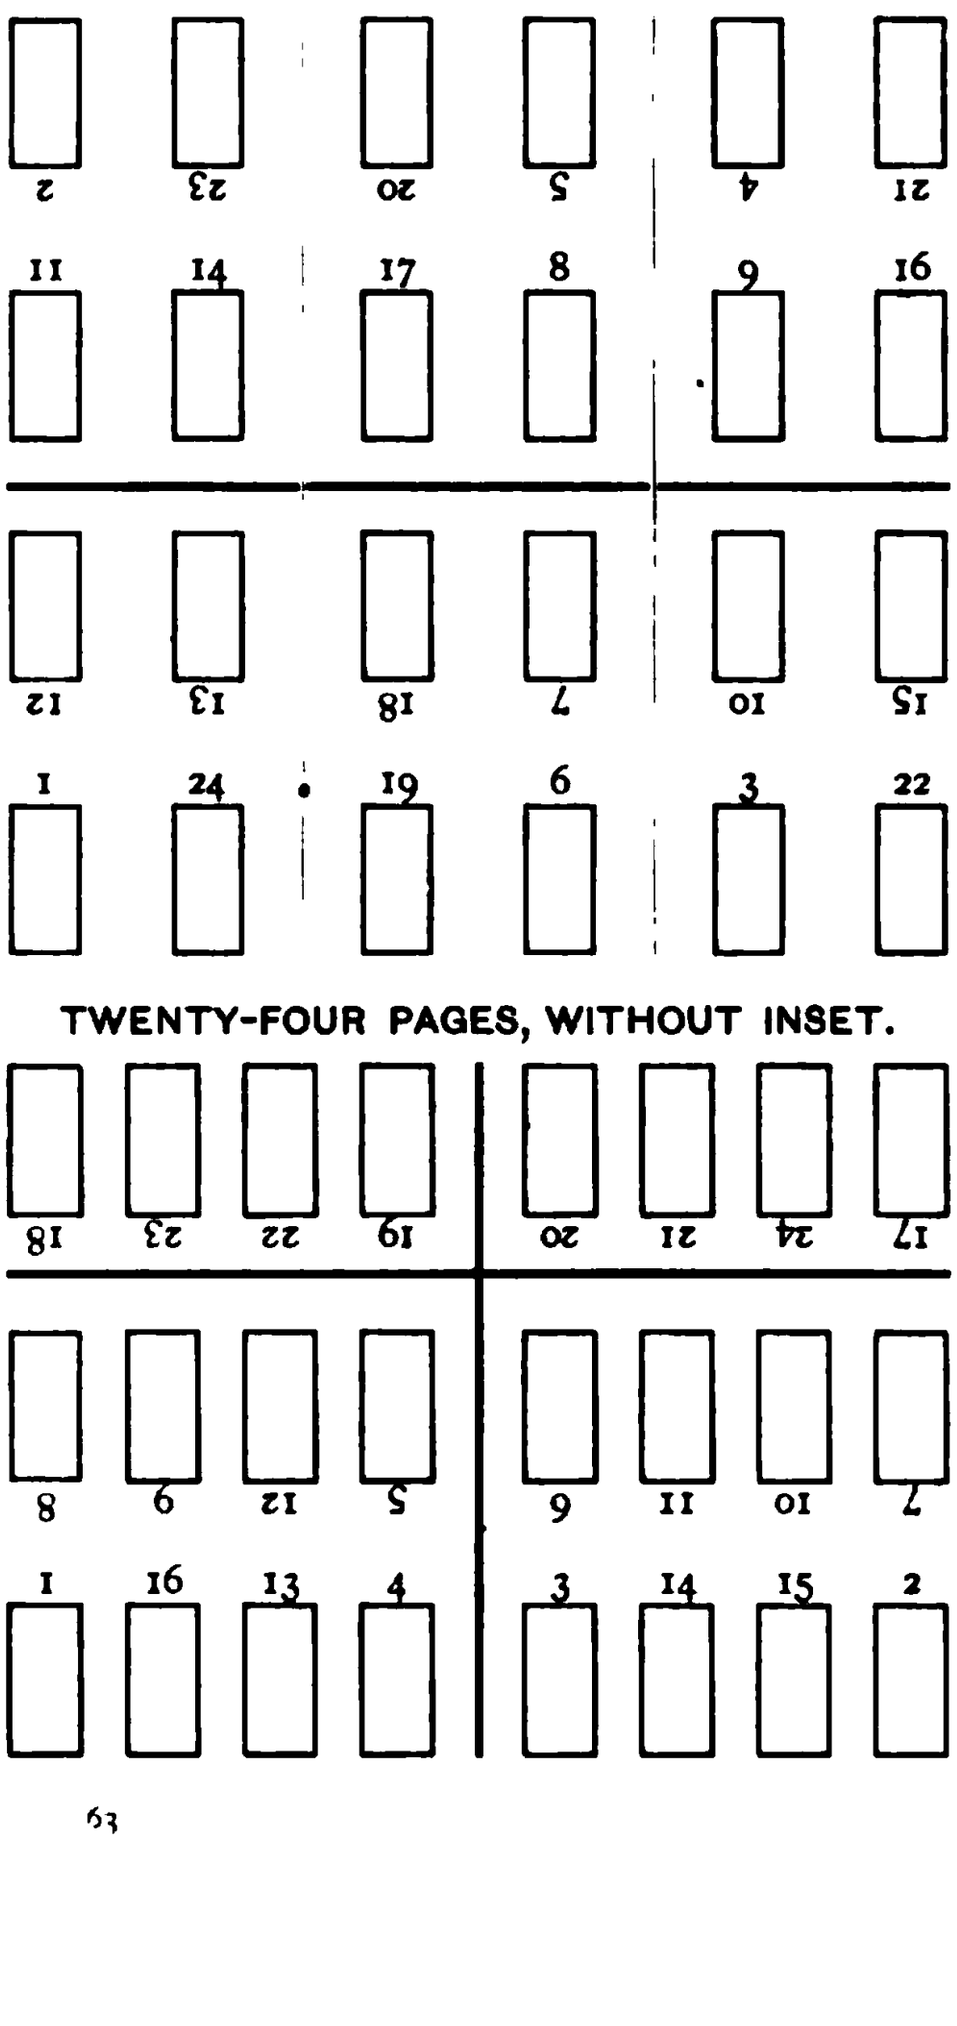
Printed on double demy or double royal. This method makes a square page, suitable for booklets, where oddity is looked for.



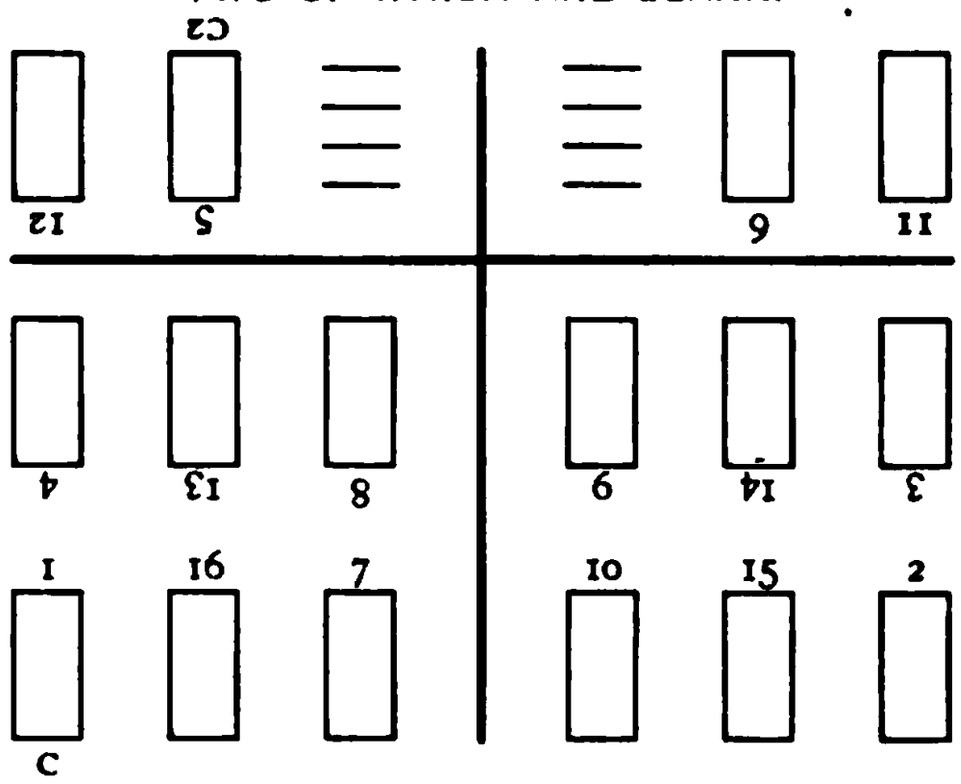
### TWENTY-FOUR PAGES, DEEP WAY.

A very satisfactory form, in common use for pamphlets. Careful division of the margins is necessary, the pressman allotting the exact margin to the edge of the sheet to be folded in. Points placed as shown will assist the binder, and should be removed before backing the sheet.



### TWENTY-FOUR PAGES, WITHOUT INSET.

### EIGHTEEN PAGES, TWO OF WHICH ARE BLANK.



When the first side is worked off, transpose pages 7 and 10 in place of 9 and 8, and pages 9 and 8 in place of 7 and 10.

### FORTY PAGES, WITH TWO SIGNATURES.

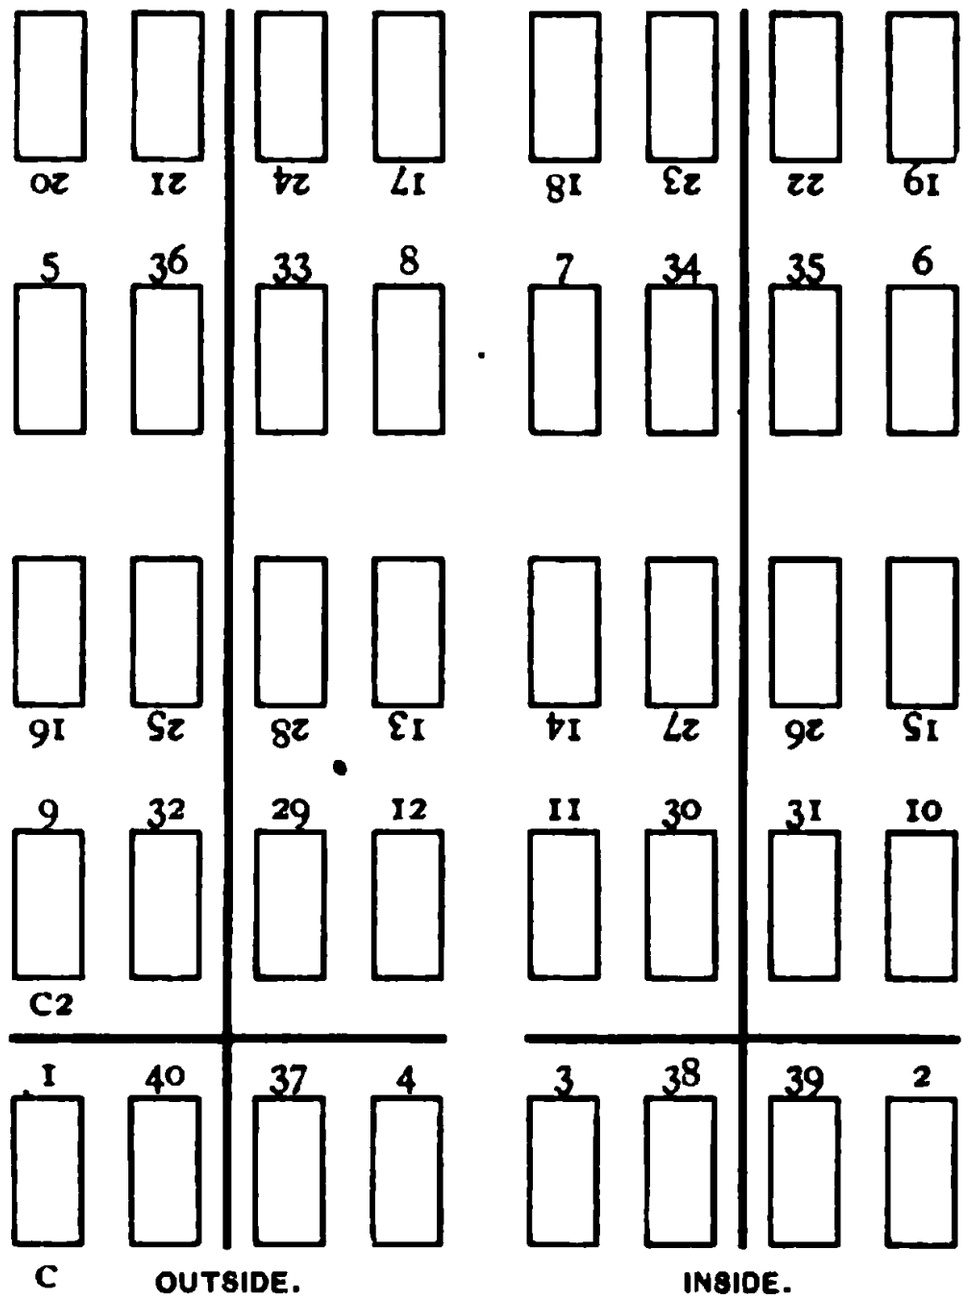
In this form there is an outset of pages, 1, 2, 3, 4, 37, 38, 39, 40, instead of an inset.



### FORTY PAGES, ONE SIGNATURE.

The paper must be trimmed at ends before printing. A point should be placed where shown, about $\frac{1}{32}$-inch from the fold, encroaching on main section of form—the pressman to deduct this space from the edge of sheet, which is folded toward the form. The division of margin must be accurate, especially at head and foot of pages.

# PRICE LIST OF PRINTING AND BINDING:

## A GUIDE FOR CHARGING.

**Compiled by DAVID RAMALEY, St. Paul, Minn.**

**Copyrighted by David Ramaley, 1896.**

The object of this publication is to unify prices, and to form a basis for agreements among printers in figuring on competitive work. The prices given are supposed to be fifty per cent. above the actual labor and material cost of the work, with ordinary conditions. The variable factor of general expense is only figured in the labor expense, because the paper or other stock used has a special expense of cutting and counting and handling equal to the proportion of general expense charge. *Twenty per cent. off from these prices will not leave twenty per cent. profit in all cases*, because sharp competition has forced down the prices of many kinds of commercial printing. A discount of twenty per cent. from the prices, in a general way, is supposed to leave twenty per cent. profit, but the factor of general expense must be considered.

# SAFE BASIS ON WHICH TO DO A PROFITABLE BUSINESS.

[*Adapted from the Code of Ethics of the United Typothetæ of America.*]

The expense of doing business, such as the wear and tear of material, interest on money invested, bad debts, rents, taxes, insurance, book-keeping, and all other items of expense, should be ever before our eyes, and we should never forget that these must be as surely levied on each particular job as its labor costs.

Always have the courage to ask for a fair remuneration for any work offered, resting assured that it will be more profitable to be without a job than to secure one in which there is a temptation to resort to questionable methods in order to avoid a financial loss in its execution.

A master printer should always contend that he is entitled, when asked for an estimate, to know the names of all who are to be requested to bid on the work. He should also insist upon his right, if he desires it, to know all the prices offered for the work and to whom and at what price it was awarded.

A master printer should not make estimates for work that he cannot do. It is always unsafe and often unjust to give prices upon a class of work upon which the cost is not positively known and has to be guessed at.

Estimates calling for detailed specifications of separate value of the paper, composition, electrotyping, presswork, ruling, binding, etc., should always be refused.

## EXPLANATORY.

The prices under the several divisions of each list, such as "100," "250," 1000," include all regular charges for labor and material to the customer unless otherwise stated, and when there is a variable factor in such prices the amount estimated for such variable factor is quoted, so that the printer can readily adjust the price in accordance with the conditions governing the work. For instance, on page 1002, in Advertising Programmes, the variable factor is composition. The price for 100 4-page Advertising Programmes on 22×32 quarto print paper is $18.25, on the basis of 8-point composition, in which amount is *included* a charge of $17.20, for composition at $4.30 per page. Now, if composition should be based on 10 Point, *deduct* the difference in cost, and if on 6 Point, *add* the difference. In other instances the variable factor is the cost of paper.

We figure composition at 70c. per 1000 in all work, including locking up or making up, and at 60c. per hour for time work.

Paper is included in these prices at an average advance of 50 per cent. on cost, unless othewise stated; but this includes storage, handling, wastage and cutting—items that are never paid for if the printer only adds 10 or 15 per cent. to cost of paper.

## COMPOSITION.

To be figured at 70c. per 1000 ems, and time work 60c. an hour.
**Alterations** to be figured separately from composition, and charged at the hour rate.
**Open Advertising Matter** on newspapers or programmes to be measured as 8 Point.
**Standing Type,** 1c. per square inch per month.

## PRESSWORK.

The value of presswork is a difficult problem, because there are so many different grades of work. The prices in the following tables represent the value of good work. Since the introduction of plated papers and half-tone work rates may not be large enough for the best service, but on the average of work in an office the figures ought to be considered as fair and reasonable.

## BASIS FOR FIGURING VALUE OF PAPER.

The basis for figuring the value of paper will be 50 per cent. on the cost price. This price is to include the proportionate cost of general expense and handling in every way—the opening, cutting, and repacking and waste.

Unless there is a special determination by the customer as to the quality of papers, figures will be based on grades of book and writing papers as follows:

Print paper, 2¾c., to be figured at . . . . . 4½
Colored print, 4c., to be figured at . . . . . 6
Common book, 4c., to be figured at . . . . . 6
S. & C. book, 4½c., to be figured at . . . . . 7

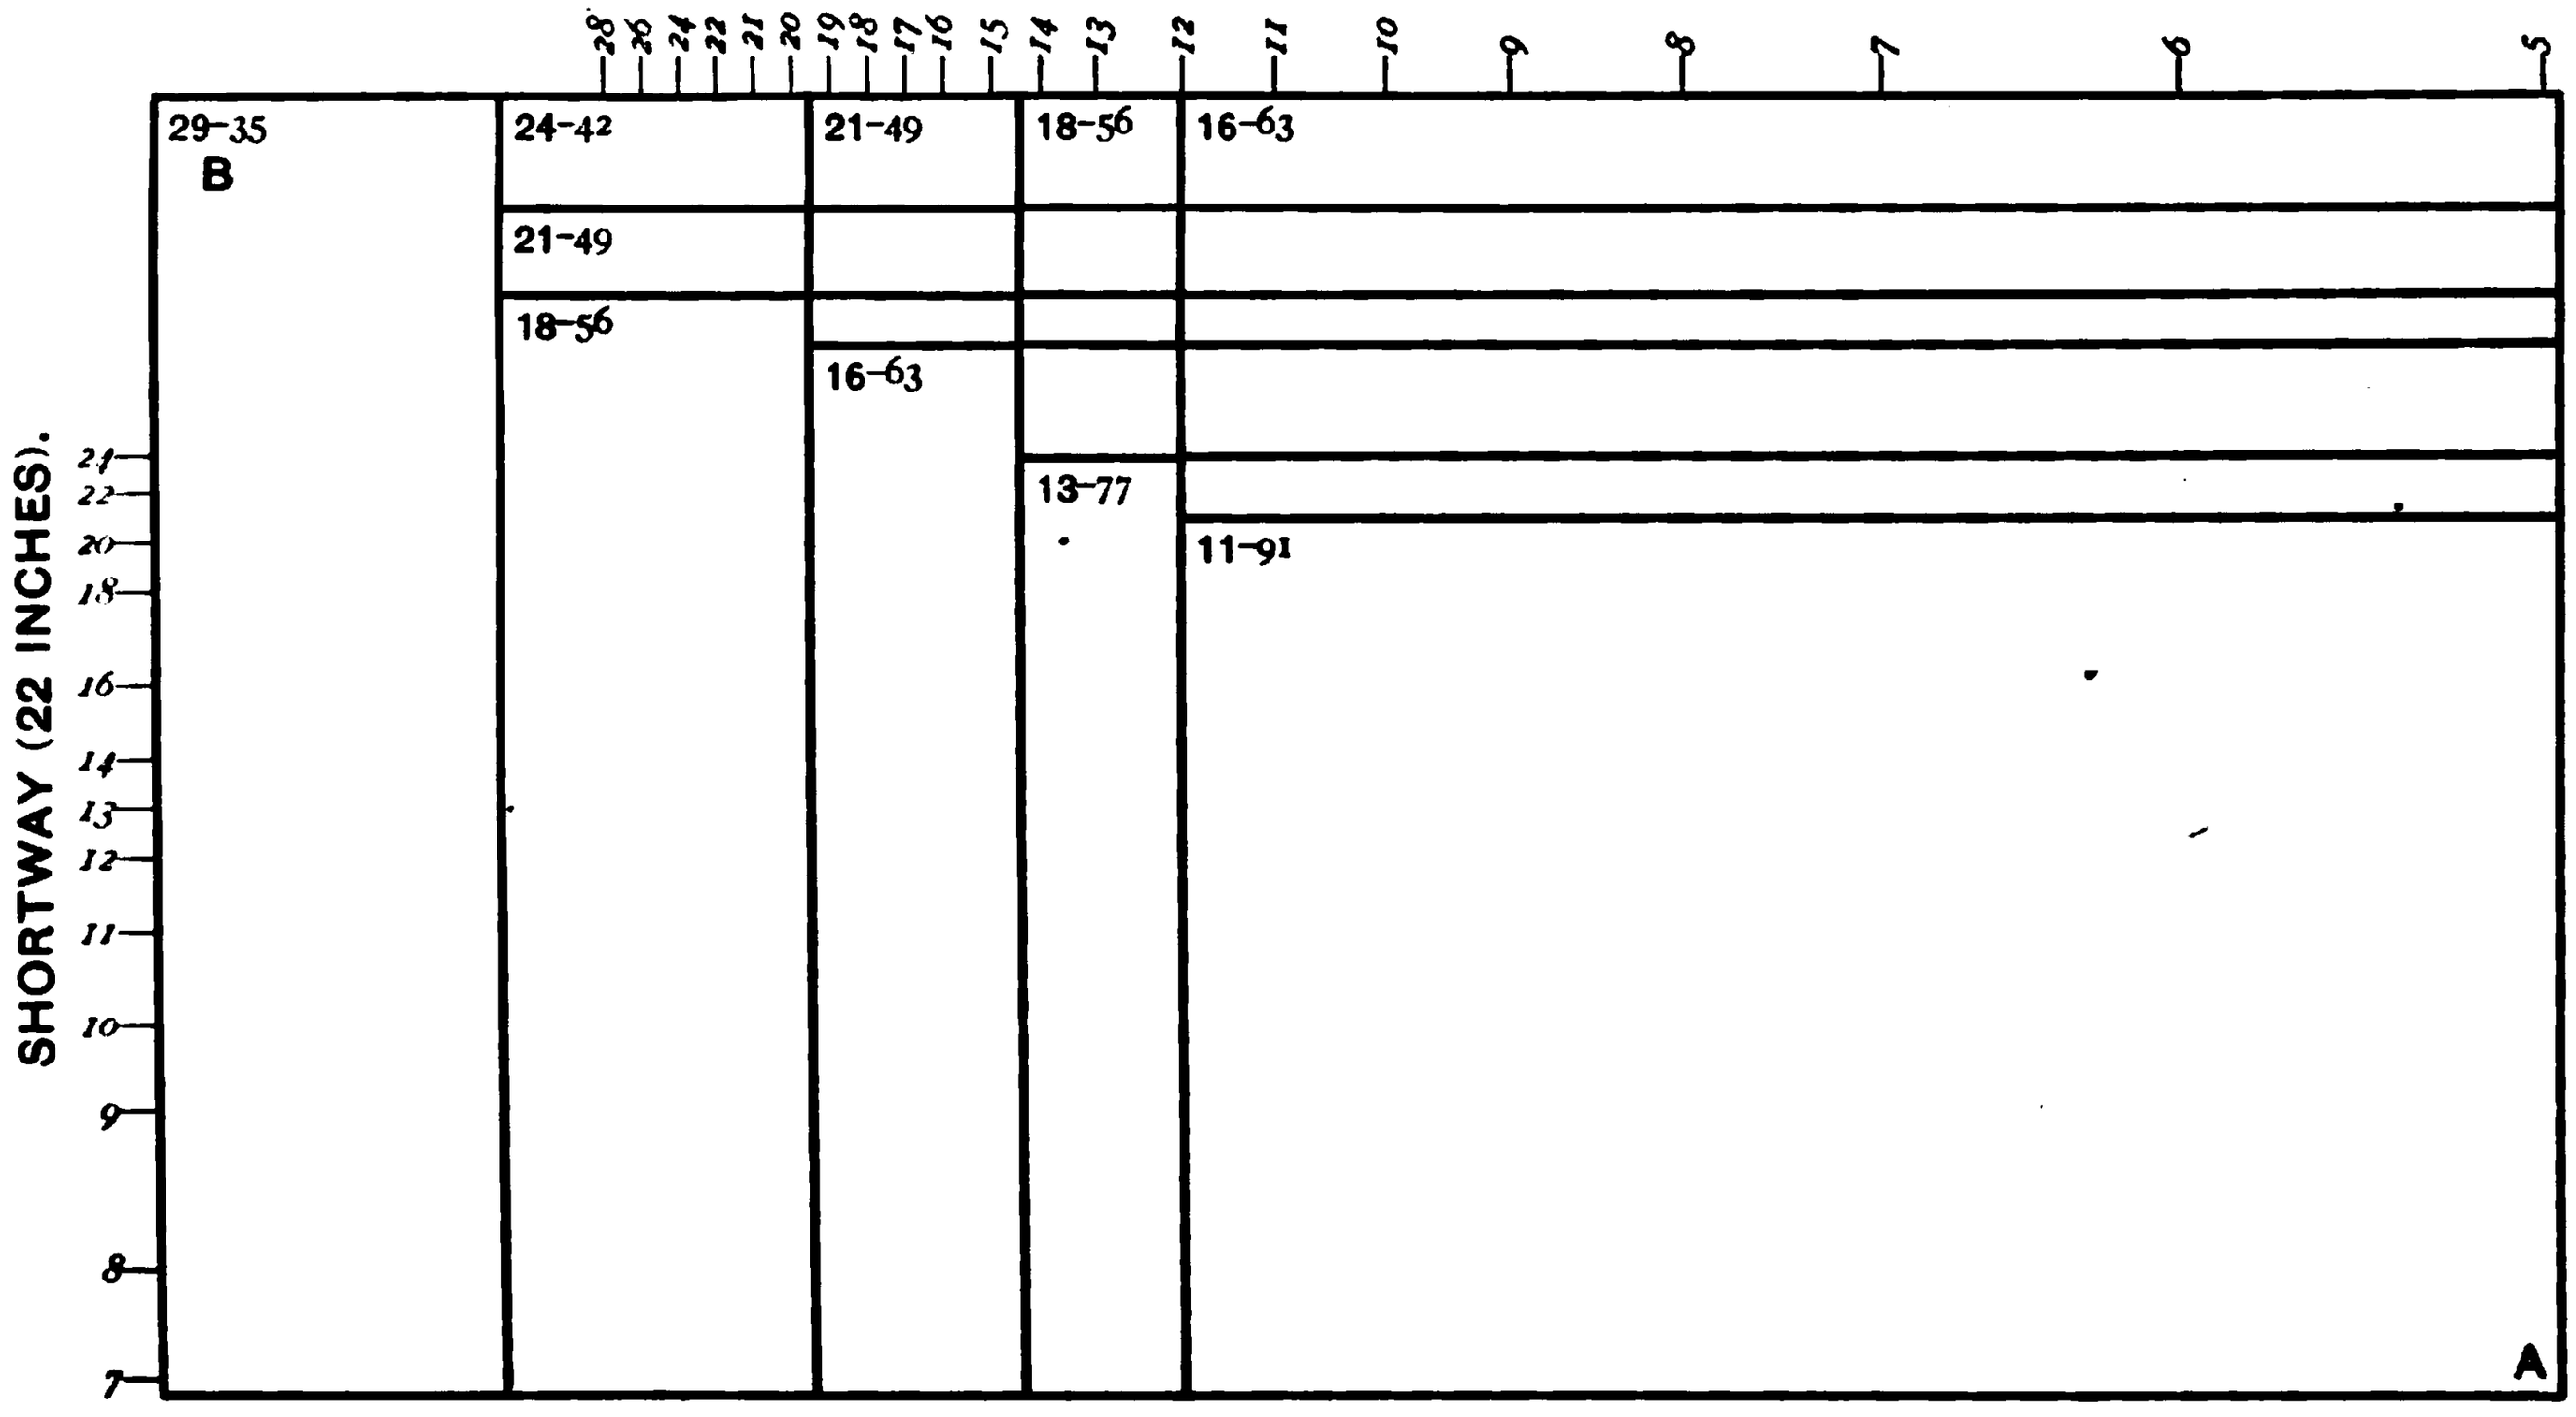
## CARD SCALE.

This is the scale referred to in the Price List of Business Cards on opposite page. The scale is based on 22 × 28 inch cardboard.



**EXPLANATION.**—The first figures in Gothic in the upper left-hand corner of each size indicate the number of sheets required for 1000 cards of that size. The figures in Roman, after the dash, indicate the number of cards that can be cut from one sheet of cardboard, *measuring from the lower right-hand corner of the scale* (*A*).

The Italic figures outside the scale indicate the number of cuts to a sheet for any size of card not exceeding the size of scale, measuring from the upper left-hand corner (B); and the number of cards procurable from a sheet may be ascertained by multiplying the shortwise and longwise numbers. Example: If a card measures from B longwise to 8 and from B shortwise to 8, the number of cards procurable from one full-sized sheet of 22 × 28 inch card will be 64.

## CARD SCALE.

The card scale on opposite page agrees approximately with the card scales issued by various dealers in cardboard. There is no standard scale. Printers should procure the card scale of the dealers who supply them with cards. The "Convenient Card Scale and Table of Prices," compiled by Mr. C. F. Pedrick and copyrighted and issued to the trade by Irwin N. Megargee & Co., dealers in cards, 12 S. Sixth St., Philadelphia, will save printers a great deal of time and insure accuracy in estimating. This valuable scale shows at a glance: (1) Cost per 1000 cards of any size after being cut from any kind or quality of board, ranging in list price from $1.00 to $15.00 per 100 sheets, 22×28 inches; (2) Which way of the sheet a card of any size will cut to the best advantage; (3) Number of sheets of 22×28 inches cardboard required to cut 1000 cards of any size. This scale is printed on a large sheet of bond paper in two colors, and applicants for it should inclose ten cents in postage stamps.

## BUSINESS CARDS.

The sizes and figures given for business cards such as 11—91, 50c. stand for 11 full sheets each cutting 91 cards, and the value, including cutting of 1000 of such cards, is 50 cents. On the general rule that all the prices given in these tables have a margin of profit the stock figures represent an addition to the cost of 50 per cent.

Round-corner cards will add 50c. for each 1000, added to the foregoing figures.

For cheap entertainment cards use $2.00 scale. For business cards use the $4.00 scale, unless specially requested for another grade.

In colored ink, add 50c. to the gross price for any number under 1000, and 10c. for added 1000. For two forms, two colors, add $1.00 to the gross price; presswork scale for second form.

Cards, backed with another form on cheap grades, add $1.00, and print both sides at once. On grades on this page make separate presswork and charge 50c. and presswork scale to gross price.

## BUSINESS CARDS—Continued.

(*See Card Scale on page 1006.*)

The finer grades of business cards should be rated somewhat higher than common grades, on account of the extra care in composition and presswork.

## BILL HEADS.

The usual sizes of stock-ruled bill heads are 6s, 4s, 3s and 2s of flat cap. The prices given are for ruled papers, costing the printer the prices named, at the rate per pound. If special ruling is required, the full expense of ruling must be added to the figures, because the grade of paper used would represent the value without ruling.

## BLANK BOOKS.

In handling blank books, printers should abandon the quire figuring of 80 pages, and substitute 100 pages.

Half binding may be either tight or loose smooth back, with paper or cloth sides and leather corners, usually colored leather.

Three-quarter binding is first-class in every respect as to stock, usually russia back and corners, finished with raised cords or hubs and cloth sides.

Full end and band binding and extra russia ends and bands, full gilt back, are well-known to the trade and need not be described. The figures here submitted are for the best of their class as to binding.
